# Primitive Terms and Axioms

Let there be *sets*. We assume that everything is a set.

Let there be a binary relation of *membership*, $\in$. If $x \in A$ we say that $x$ *belongs* to $A$, $x$ is an *element* of $A$, or $x$ is *contained* in $A$. If this does not hold we write $x \notin A$.

**Definition 1.1** (Empty)**.** A set is *empty* iff it has no elements; otherwise it is *nonempty*.

**Definition 1.2** (Disjoint)**.** Two sets $A$ and $B$ are *disjoint* iff there is no $x$ such that $x \in A$ and $x \in B$.

**Definition 1.3** (Pairwise Disjoint)**.** We say the elements of a set $x$ are *pairwise disjoint* iff, for all $y, z \in x$, either $y$ and $z$ are disjoint or $y = z$.

**Definition 1.4** (Subset)**.** Let $A$ and $B$ be sets. We say that $A$ is a *subset* of $B$, or $B$ *includes* $A$, and write $A \subseteq B$ or $B \supseteq A$, iff every element of $A$ is an element of $B$.

**Axiom 1.5** (Axiom of Extensionality)**.** *If two sets have the same elements then they are equal.*

**Axiom 1.6** (Axiom of Union)**.** *For every set $A$, there exists a set that contains all the elements that belong to at least one element of $A$.*

**Axiom 1.7** (Power Set Axiom)**.** *For any set $A$, there exists a set $B$ such that every subset of $A$ belongs to $B$.*

**Axiom Schema 1.8** (Axiom Schema of Replacement)**.** *For any property $P(x, y)$, the following is an axiom:*

*Let $A$ be a set such that, for all $x \in A$, there exists at most one $y$ such that $P(x, y)$. Then there exists a set $B$ whose elements are exactly those sets $y$ such that $\exists x \in A.P(x, y)$.*

**Axiom 1.9** (Axiom of Infinity)**.** *There exists a set $I$ that has an empty element and such that, for all $x \in I$, there exists $y \in I$ such that the elements of $y$ are exactly $x$ and the elements of $x$.*

**Axiom 1.10** (Axiom of Regularity)**.** *For any nonempty set $A$, there exists $m \in A$ such that $m$ and $A$ are disjoint.*

**Axiom 1.11** (Axiom of Choice)**.** *Let $A$ be a set of nonempty, pairwise disjoint sets. Then there exists a set $C$ such that, for all $x \in A$, there is exactly one $y$ such that $y \in C$ and $y \in x$.*

# Chapter 2

# Basic Properties and Operations on Sets

**Theorem 2.1.** *There exists a unique empty set.*

PROOF: Existence follows from the Axiom of Infinity. Uniqueness follows from the Axiom of Extensionality. □

**Definition 2.2** (Empty Set)**.** Let $\varnothing$ be the unique empty set.

**Theorem Schema 2.3** (Comprehension, Aussonderungsaxiom)**.** *For any property $P(x)$, the following is a theorem:*

*For any set $A$, there exists a set $B$ whose elements are exactly those $x \in A$ such that $P(x)$.*

PROOF:
$\langle 1 \rangle 1$. LET: $A$ be a set.
$\langle 1 \rangle 2$. For all $x \in A$, there exists at most one $y$ such that $P(x)$ and $x = y$.
$\langle 1 \rangle 3$. PICK a set $B$ whose elements are exactly those sets $y$ such that $\exists x \in A(P(x) \wedge x = y)$.
PROOF: Axiom Schema of Replacement.
$\langle 1 \rangle 4$. $\forall x(x \in B \Leftrightarrow x \in A \wedge P(x))$
□

**Definition 2.4.** Given a set $A$ and a predicate $P(x)$, we write $\{x \in A : P(x)\}$ for the set whose elements are exactly those elements $x$ of $A$ for which $P(x)$ holds.

**Definition 2.5** (Union)**.** For any set $A$, the *union* $\bigcup A$ is the set whose elements are exactly the elements of the elements of $A$.

PROOF: This exists by the Axiom of Union, and is unique by the Axiom of Extensionality. □

**Definition 2.6** (Power Set)**.** For any set $A$, the *power set* $\mathcal{P}A$ is the set whose elements are exactly the subsets of $A$.

PROOF: This exists by the Power Set Axiom, and is unique by the Axiom of Extensionality. □

**Theorem 2.7.** *For any sets $a$ and $b$, there exists a set whose elements are just $a$ and $b$.*

PROOF:
⟨1⟩1. For all $x \in \mathcal{P}\mathcal{P}\varnothing$, there exists at most one $y$ such that $(x = \varnothing \wedge y = a) \vee (x = \mathcal{P}\varnothing \wedge y = b)$
⟨1⟩2. PICK a set $B$ whose elements are the sets $y$ such that $\exists x \in \mathcal{P}\mathcal{P}\varnothing((x = \varnothing \wedge y = a) \vee (x = \mathcal{P}\varnothing \wedge y = b))$
⟨1⟩3. The elements of $B$ are exactly $a$ and $b$.
□

**Definition 2.8** ((Unordered) Pair)**.** For any sets $a$ and $b$, the *(unordered) pair* $\{a, b\}$ is the set whose elements are just $a$ and $b$.

**Definition 2.9** (Singleton)**.** For any set $a$, the *singleton* $\{a\}$ is defined to be $\{a, a\}$.

**Theorem 2.10.**

$$\forall x.x \notin x$$

PROOF:
⟨1⟩1. LET: $x$ be a set.
⟨1⟩2. PICK $m \in \{x\}$ such that $m$ and $\{x\}$ are disjoint.
  PROOF: Axiom of Regularity.
⟨1⟩3. $m = x$
  PROOF: Since $m \in \{x\}$ (⟨1⟩2).
⟨1⟩4. $x \notin m$
  PROOF: Since $m$ and $\{x\}$ are disjoint (⟨1⟩2).
⟨1⟩5. $x \notin x$
  PROOF: ⟨1⟩3, ⟨1⟩4
□

**Corollary 2.10.1.** *There is no set that contains every set.*

## 2.1 The Subset Relation

**Theorem 2.11.** *For any set $A$, we have $A \subseteq A$.*

PROOF: Every element of $A$ is an element of $A$. □

**Theorem 2.12.** *For any sets $A$, $B$ and $C$, if $A \subseteq B$ and $B \subseteq C$ then $A \subseteq C$.*

PROOF: If every element of $A$ is an element of $B$, and every element of $B$ is an element of $C$, then every element of $A$ is an element of $C$. □

**Theorem 2.13.** *For any sets $A$ and $B$, if $A \subseteq B$ and $B \subseteq A$ then $A = B$.*

PROOF: If every element of $A$ is an element of $B$, and every element of $B$ is an element of $A$, then $A$ and $B$ have the same elements, and therefore are equal by the Axiom of Extensionality. □

**Definition 2.14** (Proper Subset)**.** Let $A$ and $B$ be sets. We say that $A$ is a *proper* subset of $B$, or $B$ *properly* includes $A$, and write $A \subsetneq B$ or $B \supsetneq A$, iff $A \subseteq B$ and $A \neq B$.

## 2.2 The Empty Set

**Theorem 2.15.** *There exists a set with no elements.*

PROOF: Immediate from the Axiom of Infinity. □

**Definition 2.16** (Empty Set)**.** The *empty set* $\varnothing$ is the set with no elements.

**Theorem 2.17.** *For any set $A$ we have $\varnothing \subset A$.*

PROOF: Vacuous. □

## 2.3 Unordered Pairs

**Definition 2.18** (Singleton)**.** For any set $a$, the *singleton* $\{a\}$ is defined to be $\{a, a\}$.

## 2.4 Unions

**Definition 2.19** (Union)**.** For any set $\mathcal{C}$, the *union* of $\mathcal{C}$, $\bigcup \mathcal{C}$, is the set whose elements are the elements of the elements of $\mathcal{C}$.

We write $\bigcup_{X \in \mathcal{A}} t[X]$ for $\bigcup \{t[X] \mid X \in \mathcal{A}\}$.

PROOF: This exists by the Union Axiom and Comprehension Axiom, and is unique by the Axiom of Extensionality. □

**Proposition 2.20.**

$$\bigcup \varnothing = \varnothing$$

PROOF: There is no set that is an element of an element of $\varnothing$. □

**Proposition 2.21.** *For any set $A$, we have $\bigcup \{A\} = A$.*

PROOF: For any $x$, we have $x$ is an element of an element of $\{A\}$ if and only if $x$ is an element of $A$. □

**Definition 2.22.** We write $A \cup B$ for $\bigcup \{A, B\}$.

**Proposition 2.23.** *For any set $A$, we have $A \cup \varnothing = A$.*

PROOF: $x \in A \cup \varnothing$ iff $x \in A$ or $x \in \varnothing$, iff $x \in A$. □

**Proposition 2.24** (Idempotence)**.** *For any set $A$, we have $A \cup A = A$.*

PROOF: $x \in A$ or $x \in A$ is equivalent to $x \in A$. □

**Proposition 2.25.** *For any sets $A$ and $B$, we have $A \subseteq B$ if and only if $A \cup B = B$.*

PROOF: For any $x$, the statement "if $x \in A$ then $x \in B$" is equivalent to "$x \in A$ or $x \in B$ if and only if $x \in B$". □

**Proposition 2.26.** *For any sets $a$ and $b$, we have $\{a\} \cup \{b\} = \{a, b\}$.*

PROOF: Immediate from definitions. □

## 2.5 Intersections

**Definition 2.27** (Intersection)**.** For any sets $A$ and $B$, the *intersection* $A \cap B$ is defined to be $\{x \in A : x \in B\}$.

**Proposition 2.28.** *For any set $A$, we have $A \cap \varnothing = \varnothing$.*

PROOF: There is no $x$ such that $x \in A$ and $x \in \varnothing$. □

**Proposition 2.29.** *For any set $A$, we have*

$$A \cap A = A \ .$$

PROOF: We have $x \in A$ and $x \in A$ if and only if $x \in A$. □

**Proposition 2.30.** *For any sets $A$ and $B$, we have $A \subseteq B$ if and only if $A \cap B = A$.*

PROOF: For any $x$, the statement "if $x \in A$ then $x \in B$" is equivalent to "$x \in A$ and $x \in B$ if and only if $x \in A$". □

**Proposition 2.31.** *For any sets $A$, $B$ and $C$, we have $C \subseteq A$ if and only if $(A \cap B) \cup C = A \cap (B \cup C)$.*

PROOF: The statement "if $x \in C$ then $x \in A$" is equivalent to the statement "$((x \in A \wedge x \in B) \vee x \in C) \Leftrightarrow (x \in A \wedge (x \in B \vee x \in C))$". □

**Definition 2.32** (Disjoint)**.** Two sets $A$ and $B$ are *disjoint* if and only if $A \cap B = \varnothing$.

**Definition 2.33** (Pairwise Disjoint)**.** Let $A$ be a set. We say the elements of $A$ are *pairwise disjoint* if and only if, for all $x, y \in A$, if $x \cap y \neq \varnothing$ then $x = y$.

**Definition 2.34** (Intersection)**.** For any nonempty set $\mathcal{C}$, the *intersection* of $\mathcal{C}$, $\bigcap \mathcal{C}$, is the set that contains exactly those sets that belong to every element of $\mathcal{C}$.

We write $\bigcap_{X \in \mathcal{A}} t[X]$ for $\bigcap \{t[X] \mid X \in \mathcal{A}\}$.

PROOF:
⟨1⟩1. LET: $\mathcal{C}$ be a nonempty set.
⟨1⟩2. There exists a set $I$ whose elements are exactly the sets that belong to every element of $\mathcal{C}$.
PROOF: Pick $A \in \mathcal{C}$, and take $I = \{x \in A : \forall X \in \mathcal{C}.x \in X\}$.
⟨1⟩3. For any sets $I$, $J$, if the elements of $I$ and $J$ are exactly the sets that belong to every element of $\mathcal{C}$ then $I = J$.
PROOF: Axiom of Extensionality.
□

## 2.6 Unordered Triples

**Definition 2.35** ((Unordered) Triple)**.** Given sets $a_1, \ldots, a_n$, define the *(unordered) n-tuple* $\{a_1, \ldots, a_n\}$ to be

$$\{a_1, \ldots, a_n\} := \{a_1\} \cup \cdots \cup \{a_n\} \ .$$

## 2.7 Relative Complements

**Definition 2.36** (Relative Complement)**.** For any sets $A$ and $B$, the *difference* or *relative complement* $A - B$ is defined to be

$$A - B := \{x \in A : x \notin B\} \ .$$

**Proposition 2.37.** *For any sets $A$ and $E$, we have $A \subseteq E$ if and only if*

$$E - (E - A) = A$$

PROOF:
⟨1⟩1. LET: $A$ and $E$ be sets.
⟨1⟩2. If $A \subseteq E$ then $E - (E - A) = A$
⟨2⟩1. ASSUME: $A \subseteq E$
⟨2⟩2. $E - (E - A) \subseteq A$
PROOF: If $x \in E$ and $x \notin E - A$ then $x \in A$.
⟨2⟩3. $A \subseteq E - (E - A)$
PROOF: If $x \in A$ then $x \in E$ and $x \notin E - A$.
⟨1⟩3. If $E - (E - A) = A$ then $A \subseteq E$.
PROOF: Since $E - (E - A) \subseteq E$.
□

**Proposition 2.38.** *For any set $E$ we have*

$$E - \varnothing = E$$

PROOF: $x \in E$ if and only if $x \in E$ and $x \notin \varnothing$. □

**Proposition 2.39.** *For any set $E$ we have*

$$E - E = \varnothing \ .$$

PROOF: There is no $x$ such that $x \in E$ and $x \notin E$. □

**Proposition 2.40.** *For any sets $A$ and $E$, we have*

$$A \cap (E - A) = \varnothing \ .$$

PROOF: There is no $x$ such that $x \in A$ and $x \in E - A$. □

**Proposition 2.41.** *Let $A$ and $E$ be sets. Then $A \subseteq E$ if and only if*

$$A \cup (E - A) = E \ .$$

PROOF:
⟨1⟩1. LET: $A$ and $E$ be sets.
⟨1⟩2. If $A \subseteq E$ then $A \cup (E - A) = E$.
  ⟨2⟩1. ASSUME: $A \subseteq E$
  ⟨2⟩2. $A \cup (E - A) \subseteq E$
    PROOF: If $x \in A$ or $x \in E - A$ then $x \in E$.
  ⟨2⟩3. $E \subseteq A \cup (E - A)$
    PROOF: If $x \in E$ then either $x \in A$ or $x \notin A$. In the latter case, $x \in E - A$.
⟨1⟩3. If $A \cup (E - A) = E$ then $A \subseteq E$
  PROOF: Since $A \subseteq A \cup (E - A)$.
□

**Proposition 2.42.** *Let $A$, $B$ and $E$ be sets. Then:*

1. *If $A \subseteq B$ then $E - B \subseteq E - A$.*
2. *If $A \subseteq E$ and $E - B \subseteq E - A$ then $A \subseteq B$.*

PROOF:
⟨1⟩1. LET: $A$, $B$ and $E$ be sets.
⟨1⟩2. If $A \subseteq B$ then $E - B \subseteq E - A$.
  PROOF: If $A \subseteq B$, $x \in E$ and $x \notin B$, then we have $x \in E$ and $x \notin A$.
⟨1⟩3. If $A \subseteq E$ and $E - B \subseteq E - A$ then $A \subseteq B$.
  ⟨2⟩1. ASSUME: $A \subseteq E$
  ⟨2⟩2. ASSUME: $E - B \subseteq E - A$
  ⟨2⟩3. LET: $x \in A$
  ⟨2⟩4. $x \in E$
  ⟨2⟩5. $x \notin E - A$
  ⟨2⟩6. $x \notin E - B$
  ⟨2⟩7. $x \in B$
□

**Example 2.43.** We cannot remove the hypothesis $A \subseteq E$ in item 2 above. Let $E = \varnothing$, $A = \{\varnothing\}$ and $B = \varnothing$. Then $E - B = E - A = \varnothing$ but $A \nsubseteq B$.

**Proposition 2.44** (De Morgan's Law)**.** *For any sets $A$, $B$ and $E$, we have $E - (A \cup B) = (E - A) \cap (E - B)$.*

PROOF: $(x \in E \wedge \neg(x \in A \vee x \in B)) \Leftrightarrow (x \in E \wedge x \notin A \wedge x \in E \wedge x \notin B)$. □

**Proposition 2.45** (De Morgan's Law)**.** *For any sets $A$, $B$ and $E$, we have $E - (A \cap B) = (E - A) \cup (E - B)$.*

PROOF: $(x \in E \vee \neg(x \in A \wedge x \in B)) \Leftrightarrow (x \in E \wedge x \notin A) \vee (x \in E \wedge x \notin B)$. □

**Proposition 2.46.** *For any sets $A$, $B$ and $E$, if $A \subseteq E$ then*

$$A - B = A \cap (E - B) \ .$$

PROOF: If $A \subseteq E$ then we have $(x \in A \wedge x \notin B) \Leftrightarrow (x \in A \wedge x \in E \wedge x \notin B)$. □

**Proposition 2.47.** *For any sets $A$ and $B$, we have $A \subseteq B$ if and only if $A - B = \varnothing$.*

PROOF: Both are equivalent to the statement that there is no $x$ such that $x \in A$ and $x \notin B$. □

**Proposition 2.48.** *For any sets $A$ and $B$, we have*

$$A - (A - B) = A \cap B \ .$$

PROOF: $(x \in A \wedge \neg(x \in A \wedge x \notin B)) \Leftrightarrow x \in A \wedge x \in B$. □

**Proposition 2.49.** *For any sets $A$, $B$ and $C$, we have*

$$A \cap (B - C) = (A \cap B) - (A \cap C) \ .$$

PROOF: $(x \in A \wedge x \in B \wedge x \notin C) \Leftrightarrow (x \in A \wedge x \in B \wedge \neg(x \in A \wedge x \in C))$. □

**Proposition 2.50.** *For any sets $A$, $B$, $C$ and $E$, if $(A \cap B) - C \subseteq E$ then we have*

$$A \cap B \subseteq (A \cap C) \cup (B \cap (E - C)) \ .$$

PROOF:
⟨1⟩1. LET: $x \in A \cap B$
PROVE: $x \in (A \cap C) \cup (B \cap (E - C))$
⟨1⟩2. CASE: $x \in C$
PROOF: Then $x \in A \cap C$.
⟨1⟩3. CASE: $x \notin C$
PROOF: Then $x \in E$ and so $x \in B \cap (E - C)$.
□

**Proposition 2.51.** *For any sets $A$, $B$, $C$ and $E$, we have*

$$(A \cup C) \cap (B \cup (E - C)) \subseteq A \cup B \ .$$

PROOF: The statement $(x \in A \vee x \in C) \wedge (x \in B \vee (x \in E \wedge x \notin C))$ implies $x \in A \vee x \in B$. □

**Proposition 2.52** (De Morgan's Law)**.** *Let $E$ be a set and $\mathcal{C}$ a nonempty set. Then*

$$E - \bigcup \mathcal{C} = \bigcap_{X \in \mathcal{C}} (E - X) \ .$$

PROOF: Easy. □

**Proposition 2.53** (De Morgan's Law)**.** *Let $E$ be a set and $\mathcal{C}$ a nonempty set. Then*

$$E - \bigcap \mathcal{C} = \bigcup_{X \in \mathcal{C}} (E - X) \ .$$

PROOF: Easy. □

## 2.8 Symmetric Difference

**Definition 2.54** (Symmetric Difference)**.** For any sets $A$ and $B$, the *symmetric difference* $A + B$ is defined to be

$$A + B := (A - B) \cup (B - A) \ .$$

**Proposition 2.55.** *For any sets $A$ and $B$, we have*

$$A + B = B + A$$

PROOF: From the commutativity of union. □

**Proposition 2.56.** *For any sets $A$, $B$ and $C$, we have*

$$A + (B + C) = (A + B) + C \ .$$

PROOF: Each is the set of all $x$ that belong to either exactly one or all three of $A$, $B$ and $C$. □

**Proposition 2.57.** *For any set $A$, we have*

$$A + \varnothing = A \ .$$

PROOF:

$$\begin{aligned} A + \varnothing &= (A - \varnothing) \cup (\varnothing - A) \\ &= A \cup \varnothing \\ &= A \end{aligned}$$ □

**Proposition 2.58.** *For any set $A$ we have*

$$A + A = \varnothing \ .$$

PROOF:

$$\begin{aligned} A + A &= (A - A) \cup (A - A) \\ &= \varnothing \cup \varnothing \\ &= \varnothing \end{aligned}$$ □

## 2.9 Power Sets

**Proposition 2.59.**

$$\mathcal{P}\varnothing = \{\varnothing\}$$

PROOF: The only subset of $\varnothing$ is $\varnothing$. □

**Proposition 2.60.** *For any set $a$, we have*

$$\mathcal{P}\{a\} = \{\varnothing, \{a\}\} \ .$$

PROOF: The only subsets of $\{a\}$ are $\varnothing$ and $\{a\}$. □

**Proposition 2.61.** *For any sets $a$ and $b$, we have*

$$\mathcal{P}\{a, b\} = \{\varnothing, \{a\}, \{b\}, \{a, b\}\} \ .$$

PROOF: The only subsets of $\{a, b\}$ are $\varnothing$, $\{a\}$, $\{b\}$ and $\{a, b\}$. □

**Proposition 2.62.** *For any nonempty set $\mathcal{C}$ we have*

$$\bigcap_{X \in \mathcal{C}} \mathcal{P}X = \mathcal{P}\left(\bigcap \mathcal{C}\right) \ .$$

PROOF:

$$\begin{aligned} x \in \bigcup_{X \in \mathcal{C}} \mathcal{P}X &\Leftrightarrow \forall X \in \mathcal{C}.x \subseteq X \\ &\Leftrightarrow \forall X \in \mathcal{C}.\forall y \in x.y \in X \\ &\Leftrightarrow \forall y \in x.\forall X \in mathcalC.y \in X \\ &\Leftrightarrow x \subseteq \bigcap \mathcal{C} \end{aligned}$$

□

**Proposition 2.63.** *For any set $\mathcal{C}$ we have*

$$\bigcup_{X \in \mathcal{C}} \mathcal{P}X \subseteq \mathcal{P}\bigcup \mathcal{C} \ .$$

PROOF: If there exists $X \in \mathcal{C}$ such that $x \subseteq X$ then $x \subseteq \bigcup \mathcal{C}$. □

**Proposition 2.64.** *For any set $E$, we have*

$$\bigcap \mathcal{P}E = \varnothing \ .$$

PROOF: Since $\varnothing \in \mathcal{P}E$. □

**Proposition 2.65.** *For any sets $E$ and $F$, if $E \subseteq F$ then $\mathcal{P}E \subseteq \mathcal{P}F$.*

PROOF: If $E \subseteq F$ and $X \subseteq E$ then $X \subseteq F$. □

# Chapter 3

# Relations and Functions

## 3.1 Ordered Pairs

**Definition 3.1** (Ordered Pair)**.** For any sets $a$ and $b$, the *ordered pair* $(a, b)$ is defined by

$$(a, b) := \{\{a\}, \{a, b\}\} \ .$$

**Proposition 3.2.** *For any sets $a$, $b$, $x$ and $y$, if $(a, b) = (x, y)$ then $a = x$ and $b = y$.*

Proof:
$\langle 1 \rangle 1$. Let: $a$, $b$, $x$ and $y$ be sets.
$\langle 1 \rangle 2$. Assume: $(a, b) = (x, y)$
$\langle 1 \rangle 3$. $a = x$
  Proof: $\{a\} = \bigcap(a, b) = \bigcap(x, y) = \{x\}$.
$\langle 1 \rangle 4$. $\{a, b\} = \{x, y\}$
$\langle 1 \rangle 5$. Case: $a = b$
  $\langle 2 \rangle 1$. $x = y$
    Proof: Since $\{x, y\} = \{a, b\}$ is a singleton.
  $\langle 2 \rangle 2$. $b = y$
    Proof: $b = a = x = y$
$\langle 1 \rangle 6$. Case: $a \neq b$
  $\langle 2 \rangle 1$. $x \neq y$
    Proof: Since $\{x, y\} = \{a, b\}$ is not a singleton.
  $\langle 2 \rangle 2$. $b = y$
    Proof: $\{b\} = \{a, b\} - \{a\} = \{x, y\} - \{x\} = \{y\}$.
□

**Proposition 3.3.** *For any sets $A$, $B$ and $X$, we have*

$$(A - B) \times X = (A \times X) - (B \times X) \ .$$

Proof: Easy. □

**Proposition 3.4.** *For any sets $A$ and $B$, we have $A \times B = \varnothing$ if and only if $A = \varnothing$ or $B = \varnothing$.*

PROOF: Easy. □

**Proposition 3.5.** *For any sets $A$, $B$, $X$ and $Y$, if $A \subseteq X$ and $B \subseteq Y$ then $A \times B \subseteq X \times Y$. The converse holds assuming $A \neq \varnothing$ and $B \neq \varnothing$.*

PROOF: Easy. □

**Definition 3.6** (Cartesian Product)**.** For any sets $A$ and $B$, the *Cartesian product* $A \times B$ is

$$A \times B := \{p \in \mathcal{PP}(A \cup B) : \exists a \in A. \exists b \in B. p = (a, b)\} \ .$$

## 3.2 Relations

**Definition 3.7** (Relation)**.** A *relation* is a set of ordered pairs.
If $R$ is a relation, we write $xRy$ for $(x, y) \in R$.
Given sets $X$ and $Y$, a relation *between $X$ and $Y$* is a subset of $X \times Y$.
Given a set $X$, a relation *on $X$* is a relation between $X$ and $X$.

**Definition 3.8** (Domain)**.** The *domain* of a relation $R$ is the set

$$\operatorname{dom} R := \left\{x \in \bigcup\bigcup R : \exists y.(x, y) \in R\right\} \ .$$

**Definition 3.9** (Range)**.** The *range* of a relation $R$ is the set

$$\operatorname{ran} R := \left\{y \in \bigcup\bigcup R : \exists x.(x, y) \in R\right\} \ .$$

**Definition 3.10** (Reflexive)**.** Let $R$ be a relation on $X$. Then $R$ is *reflexive* iff, for all $x \in X$, we have $xRx$.

**Definition 3.11** (Symmetric)**.** Let $R$ be a relation on $X$. Then $R$ is *symmetric* iff, whenever $xRy$, then $yRx$.

**Definition 3.12** (Antisymmetric)**.** A relation $R$ is *antisymmetric* iff, whenever $xRy$ and $yRx$, then $x = y$.

**Definition 3.13** (Transitive)**.** Let $R$ be a relation on $X$. Then $R$ is *transitive* iff, whenever $xRy$ and $yRz$, then $xRz$.

**Definition 3.14** (Identity Relation)**.** For any set $X$, the *identity relation* $I_X$ on $X$ is

$$I_X = \{(x, x) : x \in X\} \ .$$

## 3.3 Composition

**Definition 3.15** (Composition)**.** Let $R$ be a relation between $X$ and $Y$, and $S$ a relation between $Y$ and $Z$. The *composite* or *relative product* $S \circ R = SR$ is the relation between $X$ and $Z$ defined by

$$x(S \circ R)z \Leftrightarrow \exists y \in Y(xRy \wedge ySz) \ .$$

**Proposition 3.16.** *Let $R$ be a relation between $X$ and $Y$, $S$ a relation between $Y$ and $Z$, and $T$ a relation between $Z$ and $W$. Then*

$$T(SR) = (TS)R \ .$$

Proof: Easy. □

**Example 3.17.** Composition of relations is not commutative in general. Let $X = \{a, b\}$ where $a \neq b$. Let $R = \{(a, a), (b, a)\}$ and $S = \{(a, b), (b, b)\}$. Then $SR = S$ but $RS = R \neq S$.

**Proposition 3.18.** *A relation $R$ is transitive if and only if $RR \subseteq R$.*

Proof: Easy. □

## 3.4 Inverses

**Definition 3.19** (Inverse)**.** Let $R$ be a relation between $X$ and $Y$. The *inverse* or *converse* $R^{-1}$ is the relation between $Y$ and $X$ defined by

$$yR^{-1}x \Leftrightarrow xRy \ .$$

**Proposition 3.20.** *For any relation $R$, we have*

$$\operatorname{dom} R^{-1} = \operatorname{ran} R \ .$$

Proof: Easy. □

**Proposition 3.21.** *For any relation $R$, we have*

$$\operatorname{ran} R^{-1} = \operatorname{dom} R \ .$$

Proof: Easy. □

**Proposition 3.22.** *Let $R$ be a relation between $X$ and $Y$, and $S$ a relation between $Y$ and $Z$. Then*

$$(SR)^{-1} = R^{-1}S^{-1} \ .$$

Proof: Easy. □

**Proposition 3.23.** *A relation $R$ is symmetric if and only if $R \subseteq R^{-1}$.*

Proof: Easy. □

**Proposition 3.24.** *Let $R$ be a relation between $X$ and $Y$. Then*

$$I_Y R = R I_X = R \ .$$

PROOF: Easy. □

**Proposition 3.25.** *A relation $R$ on a set $X$ is reflexive if and only if $I_X \subseteq R$.*

PROOF: Easy. □

**Proposition 3.26.** *Let $R$ be a relation on a set $X$. Then $R$ is antisymmetric iff $R \cap R^{-1} \subseteq I_X$.*

PROOF: Easy. □

## 3.5 Equivalence Relations

**Definition 3.27** (Equivalence Relation)**.** Let $R$ be a relation on $X$. Then $R$ is an *equivalence relation* iff it is reflexive, symmetric and transitive.

**Definition 3.28** (Partition)**.** Let $X$ be a set. A *partition* of $X$ is a pairwise disjoint set of nonempty subsets of $X$ whose union is $X$.

**Definition 3.29** (Equivalence Class)**.** Let $R$ be an equivalence relation on $X$. Let $x \in X$. The *equivalence class* of $x$ with respect to $R$ is

$$x/R := \{y \in X : xRy\} \ .$$

We write $X/R$ for the set of all equivalence classes with respect to $R$.

**Definition 3.30** (Induced)**.** Let $P$ be a partition of $X$. The relation *induced* by $P$ is $X/P$ where $x(X/P)y$ iff there exists $X \in P$ such that $x \in X$ and $y \in X$.

**Theorem 3.31.** *Let $R$ be an equivalence relation on $X$. Then $X/R$ is a partition of $X$ that induces the relation $R$.*

PROOF: Easy. □

**Theorem 3.32.** *Let $P$ be a partition of $X$. Then $X/P$ is an equivalence relation on $X$, and $P = X/(X/P)$.*

PROOF: Easy. □

## 3.6 Functions

**Definition 3.33** (Function)**.** Let $X$ and $Y$ be sets. A *function, map, mapping, transformation* or *operator $f$ from $X$ to $Y$*, $f : X \to Y$, is a relation $f$ between $X$ and $Y$ such that, for all $x \in X$, there exists a unique $f(x) \in Y$, called the *value* of $f$ at the *argument* $x$, such that $(x, f(x)) \in f$.

**Definition 3.34** (Family)**.** Let $I$ and $X$ be sets. A *family* of elements of $X$ *indexed* by $I$ is a function $a : I \to X$. We write $a_i$ for $a(i)$, and $\{a_i\}_{i\in I}$ for $a$.

**Definition 3.35** (Cartesian Product of a Family of Sets)**.** Let $\{A_i\}_{i\in I}$ be a family of sets. The *Cartesian product* $\times_{i\in I} A_i$ is the set of all families $\{a_i\}_{i\in I}$ such that $\forall i \in I.a_i \in A_i$.

We write $A^I$ for $\times_{i\in I} A$.

**Definition 3.36** (Injective)**.** A function $f : X \to Y$ is *one-to-one* or *injective* or an *injection* iff, for all $x, y \in X$, if $f(x) = f(y)$ then $x = y$. In this case, we write $f : X \rightarrowtail Y$.

**Definition 3.37** (Surjective)**.** Let $f : X \to Y$. We say $f$ is *surjective*, or a *surjection*, or $f$ maps $X$ *onto* $Y$ iff $\operatorname{ran} f = Y$. In this case, we write $f : X \twoheadrightarrow Y$.

**Definition 3.38** (Bijective)**.** Let $f : X \to Y$. Then $f$ is *bijective*, or a *bijection*, iff it is injective and surjective.

**Definition 3.39** (Image)**.** Let $f : X \to Y$ and $A \subseteq X$. The *image* of $A$ under $f$ is

$$f(A) := \{f(x) : x \in A\} \ .$$

**Proposition 3.40.** *Let $f : X \to Y$ and $A \subseteq B \subseteq X$. Then $f(A) \subseteq f(B)$.*

Proof:
⟨1⟩1. Let: $X$ and $Y$ be sets.
⟨1⟩2. Let: $f : X \to Y$
⟨1⟩3. Let: $A, B \in \mathcal{P}X$ with $A \subseteq B$.
⟨1⟩4. Let: $y \in f(A)$
⟨1⟩5. Pick $x \in A$ such that $f(x) = y$
  Proof: ⟨1⟩4
⟨1⟩6. $x \in B$
  Proof: ⟨1⟩3, ⟨1⟩5
⟨1⟩7. $y \in f(B)$
  Proof: ⟨1⟩5, ⟨1⟩6
□

**Proposition 3.41.** *Let $f : X \to Y$. Let $\mathcal{A} \subseteq \mathcal{P}X$. Then $f\left(\bigcup \mathcal{A}\right) = \bigcup_{A\in\mathcal{A}} f(A)$.*

Proof:

$$\begin{aligned} y \in f\left(\bigcup \mathcal{A}\right) &\Leftrightarrow \exists x \in \bigcup \mathcal{A}.y = f(x) \\ &\Leftrightarrow \exists x.\exists A \in \mathcal{A}(x \in A \wedge y = f(x)) \\ &\Leftrightarrow \exists A \in \mathcal{A}.\exists x \in A.y = f(x) \\ &\Leftrightarrow \exists A \in \mathcal{A}.y \in f(A) \\ &\Leftrightarrow y \in \bigcup_{A\in\mathcal{A}} f(A) \end{aligned}$$

□

**Proposition 3.42.** *Let $f : X \to Y$. Let $\mathcal{A}$ be a nonempty subset of $\mathcal{P}X$. Then $f\left(\bigcap \mathcal{A}\right) \subseteq \bigcap_{A\in\mathcal{A}} f(A)$. Equality holds if $f$ is injective.*

PROOF:
⟨1⟩1. LET: $X$ and $Y$ be sets.
⟨1⟩2. LET: $f : X \to Y$
⟨1⟩3. LET: $\mathcal{A}$ be a nonempty subset of $\mathcal{P}X$.
⟨1⟩4. $f\left(\bigcap \mathcal{A}\right) \subseteq \bigcap_{A \in \mathcal{A}} f(A)$
  ⟨2⟩1. LET: $y \in f\left(\bigcap \mathcal{A}\right)$
  ⟨2⟩2. PICK $x \in \bigcap \mathcal{A}$ such that $y = f(x)$

PROOF: ⟨3⟩2, ⟨3⟩3
⟨3⟩5. Q.E.D.
PROOF: ⟨2⟩3 and ⟨3⟩4 form a contradiction.
⟨2⟩7. $y \in f(A) - f(B)$
PROOF: ⟨2⟩5, ⟨2⟩6
□

**Definition 3.44** (Inclusion Map)**.** Let $Y$ be a set and $X \subseteq Y$. Then the *inclusion map* $i : X \hookrightarrow Y$ is the function defined by $i(x) = x$ for all $x \in X$.

**Proposition 3.45.** *For any set $X$, the identity relation $I_X$ is a function $X \to X$.*

PROOF: Easy. □

**Definition 3.46** (Restriction)**.** Let $f : Y \to Z$ and $X \subseteq Y$. The *restriction* of $f$ to $X$ is the function $f \restriction X : X \to Z$ defined by

$$(f \restriction X)(x) = f(x) \qquad (x \in X) \ .$$

Given sets $X$, $Y$ and $Z$ with $X \subseteq Y$, if $f : X \to Z$ and $g : Y \to Z$, we say $g$ is an *extension* of $f$ to $Y$ iff $f = g\restriction X$.

**Definition 3.47** (Projection)**.** Given sets $X$ and $Y$, the *projection* maps $\pi_1 : X \times Y \to X$ and $\pi_2 : X \times Y \to Y$ are defined by

$$\pi_1(x, y) = x, \qquad \pi_2(x, y) = y \qquad (x \in X, y \in Y) \ .$$

**Definition 3.48** (Canonical Map)**.** Let $X$ be a set and $R$ an equivalence relation on $X$. The *canonical map* $\pi : X \to X/R$ is the map defined by $\pi(x) = x/R$.

**Proposition 3.49.** *Let $f : X \to Y$. Then the following are equivalent:*

1. *$f$ is one-to-one.*
2. *For all $A, B \subseteq X$, we have $f(A \cap B) = f(A) \cap f(B)$.*
3. *For all $A \subseteq X$, we have $f(X - A) \subseteq Y - f(A)$.*

PROOF: Easy. □

**Proposition 3.50.** *Let $f : X \to Y$. Then $f$ maps $X$ onto $Y$ if and only if, for all $A \subseteq X$, we have $Y - f(A) \subseteq f(X - A)$.*

PROOF: Easy. □

## 3.7 Families

**Proposition 3.51** (Generalized Associative Law for Unions)**.** *Let $\{I_j\}_{j\in J}$ be a family of sets. Let $K = \bigcup_{j\in J} I_j$. Let $\{A_k\}_{k\in K}$ be a family of sets indexed by $K$. Then*

$$\bigcup_{k\in K} A_k = \bigcup_{j\in J} \bigcup_{i\in I_j} A_i \ .$$

PROOF: Easy. □

**Proposition 3.52** (Generalized Commutative Law for Unions)**.** *Let $\{I_j\}_{j\in J}$ be a family of sets. Let $f : J \to J$ be a one-to-one correspondence from $J$ onto $J$. Then*

$$\bigcup_{j\in J} I_j = \bigcup_{j\in J} I_{f(j)} \ .$$

PROOF: Easy. □

**Proposition 3.53** (Generalized Associative Law for Intersections)**.** *Let $\{I_j\}_{j\in J}$ be a nonempty family of nonempty sets. Let $K = \bigcup_{j\in J} I_j$. Let $\{A_k\}_{k\in K}$ be a family of sets indexed by $K$. Then*

$$\bigcap_{k\in K} A_k = \bigcap_{j\in J} \bigcap_{i\in I_j} A_i \ .$$

PROOF: Easy. □

**Proposition 3.54** (Generalized Commutative Law for Intersections)**.** *Let $\{I_j\}_{j\in J}$ be a nonempty family of sets. Let $f : J \to J$ be a one-to-one correspondence from $J$ onto $J$. Then*

$$\bigcap_{j\in J} I_j = \bigcap_{j\in J} I_{f(j)} \ .$$

PROOF: Easy. □

**Proposition 3.55.** *Let $B$ be a set and $\{A_i\}_{i\in I}$ a family of sets. Then*

$$B \cap \bigcup_{i\in I} A_i = \bigcup_{i\in I} (B \cap A_i)$$

PROOF: Easy. □

**Proposition 3.56.** *Let $B$ be a set and $\{A_i\}_{i\in I}$ a nonempty family of sets. Then*

$$B \cup \bigcap_{i\in I} A_i = \bigcap_{i\in I} (B \cup A_i)$$

PROOF: Easy. □

**Definition 3.57** (Projection)**.** Let $\{A_i\}_{i\in I}$ be a family of sets and $i \in I$. The *projection* function $\pi_i : \times_{i\in I} A_i \to A_i$ is defined by $\pi_i(a) = a_i$.

**Proposition 3.58.** *Let $\{A_i\}_{i\in I}$ and $\{B_j\}_{j\in J}$ be families of sets. Then*

$$\left(\bigcup_{i\in I} A_i\right) \times \left(\bigcup_{j\in J} B_j\right) = \bigcup_{i\in I}\bigcup_{j\in J} (A_i \times B_j) \ .$$

PROOF: Easy. □

**Proposition 3.59.** *Let $\{A_i\}_{i\in I}$ and $\{B_j\}_{j\in J}$ be nonempty families of sets. Then*

$$\left(\bigcap_{i\in I} A_i\right) \times \left(\bigcap_{j\in J} B_j\right) = \bigcap_{i\in I}\bigcap_{j\in J} (A_i \times B_j) \ .$$

PROOF: Easy. □

**Proposition 3.60.** *Let $f : X \to Y$. Let $\{A_i\}_{i\in I}$ be a family of subsets of $X$. Then*

$$f\left(\bigcup_{i\in I} A_i\right) = \bigcup_{i\in I} f(A_i) \ .$$

PROOF: Easy. □

**Example 3.61.** It is not true in general that, if $f : X \to Y$ and $\{A_i\}_{i\in I}$ is a nonempty family of subsets of $X$, then $f\left(\bigcap_{i\in I} A_i\right) = \bigcap_{i\in I} f(A_i)$.

Take $X = \{a, b\}$ and $Y = \{c\}$ where $a \neq b$. Take $I = \{i, j\}$ with $i \neq j$. Let $A_i = \{a\}$ and $A_j = \{b\}$. Let $f$ be the unique function $X \to Y$. Then $f\left(\bigcap_{i\in I} A_i\right) = f(\varnothing) = \varnothing$ but $\bigcap_{i\in I} f(A_i) = \{c\}$.

## 3.8 Inverses and Composites of Functions

### 3.8.1 Inverse Image

**Definition 3.62** (Inverse Image)**.** Let $f : X \to Y$. Let $B$ be a subset of $Y$. Then the *inverse image* of $B$ under $f$ is

$$f^{-1}(B) = \{x \in X : f(x) \in B\} \ .$$

**Proposition 3.63.** *Let $f : X \to Y$. Let $B \subseteq Y$. Then*

$$f(f^{-1}(B)) \subseteq B \ .$$

*Equality holds if $f$ is surjective.*

PROOF:
⟨1⟩1. LET: $X$ and $Y$ be sets.
⟨1⟩2. LET: $f : X \to Y$
⟨1⟩3. LET: $B \subseteq Y$
⟨1⟩4. $f(f^{-1}(B)) \subseteq B$
  ⟨2⟩1. LET: $y \in f(f^{-1}(B))$
  ⟨2⟩2. PICK $x \in f^{-1}(B)$ such that $f(x) = y$
  ⟨2⟩3. $f(x) \in B$
  ⟨2⟩4. $y \in B$
⟨1⟩5. If $f$ is surjective then $f(f^{-1}(B)) = B$
  ⟨2⟩1. ASSUME: $f$ is surjective.
  ⟨2⟩2. LET: $y \in B$
  ⟨2⟩3. PICK $x \in X$ such that $f(x) = y$
    PROOF: ⟨2⟩1, ⟨2⟩2
  ⟨2⟩4. $x \in f^{-1}(B)$
    PROOF: ⟨2⟩2, ⟨2⟩3
  ⟨2⟩5. $y \in f(f^{-1}(B))$
    PROOF: ⟨2⟩3, ⟨2⟩4
□

**Proposition 3.64.** *Let $f : X \to Y$. Let $A \subseteq X$. Then*

$$A \subseteq f^{-1}(f(A)) \ .$$

*Equality holds if $f$ is one-to-one.*

PROOF:
⟨1⟩1. LET: $X$ and $Y$ be sets.
⟨1⟩2. LET: $f : X \to Y$
⟨1⟩3. LET: $A \subseteq X$
⟨1⟩4. $A \subseteq f^{-1}(f(A))$
  ⟨2⟩1. LET: $x \in A$
  ⟨2⟩2. $f(x) \in f(A)$
  ⟨2⟩3. $x \in f^{-1}(f(x))$

⟨1⟩5. If $f$ is injective then $f^{-1}(f(A)) = A$
  ⟨2⟩1. ASSUME: $f$ is injective.
  ⟨2⟩2. LET: $x \in f^{-1}(f(A))$
  ⟨2⟩3. $f(x) \in f(A)$
    PROOF: ⟨2⟩2
  ⟨2⟩4. PICK $x' \in A$ such that $f(x') = f(x)$
    PROOF: ⟨2⟩3
  ⟨2⟩5. $x' = x$
    PROOF: ⟨2⟩1, ⟨2⟩4
  ⟨2⟩6. $x \in A$
    PROOF: ⟨2⟩4, ⟨2⟩5
□

**Proposition 3.65.** *Let $f : X \to Y$. Let $A \subseteq B \subseteq Y$. Then $f^{-1}(A) \subseteq f^{-1}(B)$.*

PROOF:
⟨1⟩1. LET: $X$ and $Y$ be sets.
⟨1⟩2. LET: $f : X \to Y$
⟨1⟩3. LET: $A \subseteq B \subseteq Y$
⟨1⟩4. LET: $x \in f^{-1}(A)$
⟨1⟩5. $f(x) \in A$
⟨1⟩6. $f(x) \in B$
⟨1⟩7. $x \in f^{-1}(B)$
□

**Proposition 3.66.** *Let $f : X \to Y$. Let $\mathcal{B} \subseteq Y$. Then*

$$f^{-1}\left(\bigcup \mathcal{B}\right) = \bigcup_{B \in \mathcal{B}} f^{-1}(B) \ .$$

PROOF:

$$\begin{aligned} x \in f^{-1}\left(\bigcup \mathcal{B}\right) &\Leftrightarrow f(x) \in \bigcup \mathcal{B} \\ &\Leftrightarrow \exists B \in \mathcal{B}.f(x) \in B \\ &\Leftrightarrow \exists B \in \mathcal{B}.x \in f^{-1}(B) \\ &\Leftrightarrow x \in \bigcup_{B \in \mathcal{B}} f^{-1}(B) \end{aligned}$$ □

**Proposition 3.67.** *Let $f : X \to Y$. Let $\{B_i\}_{i \in I}$ be a nonempty family of subsets of $Y$. Then*

$$f^{-1}\left(\bigcap_{i \in I} B_i\right) = \bigcap_{i \in I} f^{-1}(B_i) \ .$$

PROOF: Easy. □

**Proposition 3.68.** *Let $f : X \to Y$ and $B \subseteq Y$. Then $f^{-1}(Y - B) = X - f^{-1}(B)$.*

PROOF: Easy. □

### 3.8.2 Inverse of a Function

**Proposition 3.69.** *Let $f : X \approx Y$. Then $f^{-1}$ is a function, and is a bijection $f^{-1} : Y \approx X$.*

PROOF:
⟨1⟩1. LET: $X$ and $Y$ be sets.
⟨1⟩2. LET: $f : X \approx Y$
⟨1⟩3. $f^{-1}$ is a function.
  ⟨2⟩1. LET: $(x, y), (x, z) \in f^{-1}$
  ⟨2⟩2. $(y, x), (z, x) \in f$
  ⟨2⟩3. $y = z$
    PROOF: $f$ is injective.
⟨1⟩4. $\operatorname{dom} f^{-1} = Y$
  PROOF: Proposition 3.20, ⟨1⟩2
⟨1⟩5. $\operatorname{ran} f^{-1} = X$
  PROOF:

$$\begin{aligned} x \in \operatorname{ran} f^{-1} &\Leftrightarrow \exists y.(y, x) \in f^{-1} \\ &\Leftrightarrow \exists y.(x, y) \in f \\ &\Leftrightarrow x \in \operatorname{dom} f \\ &\Leftrightarrow x \in X \end{aligned}$$

⟨1⟩6. $f^{-1}$ is injective.
  ⟨2⟩1. LET: $y, y' \in Y$
  ⟨2⟩2. ASSUME: $f^{-1}(y) = f^{-1}(y')$
  ⟨2⟩3. $y = y'$
    PROOF: $y = f(f^{-1}(y)) = f(f^{-1}(y')) = y'$.
□

**Proposition 3.70.** *Let $f : X \to Y$ and $g : Y \to Z$. Then $gf : X \to Z$ and, for all $x \in X$, we have*

$$(g \circ f)(x) = g(f(x)) \ .$$

PROOF: Easy. □

**Example 3.71.** Example 3.17 shows that function composition is not commutative in general.

**Proposition 3.72.** *The composite of two injective functions is injective.*

PROOF:
⟨1⟩1. LET: $f : X \rightarrowtail Y$ and $g : Y \rightarrowtail Z$
⟨1⟩2. LET: $x, y \in X$
⟨1⟩3. ASSUME: $(g \circ f)(x) = (g \circ f)(y)$
⟨1⟩4. $g(f(x)) = g(f(y))$
⟨1⟩5. $f(x) = f(y)$
  PROOF: $g$ is injective.
⟨1⟩6. $x = y$
  PROOF: $f$ is injective.

□

**Proposition 3.73.** *Let $f : X \to Y$ and $g : Y \to Z$. If $g \circ f$ is injective then $f$ is injective.*

PROOF: If $f(x) = f(y)$ then $g(f(x)) = g(f(y))$ and so $x = y$. □

**Proposition 3.74.** *The composite of two surjective functions is surjective.*

PROOF:
⟨1⟩1. LET: $f : X \twoheadrightarrow Y$ and $g : Y \twoheadrightarrow Z$
⟨1⟩2. LET: $z \in Z$
⟨1⟩3. PICK $y \in Y$ such that $g(y) = z$
  PROOF: Since $g$ is surjective.
⟨1⟩4. PICK $x \in X$ such that $f(x) = y$
  PROOF: Since $f$ is surjective.
⟨1⟩5. $(g \circ f)(x) = z$
□

**Proposition 3.75.** *Let $f : X \to Y$ and $g : Y \to Z$. If $g \circ f$ is surjective then $g$ is surjective.*

PROOF: Let $z \in Z$. Pick $x \in X$ such that $g(f(x)) = z$. Then there exists $y$ such that $g(y) = z$, namely $y = f(x)$. □

**Proposition 3.76.** *The composite of two bijective functions is bijective.*

PROOF: Propositions 3.72 and 3.74. □

**Proposition 3.77.** *Let $X$, $Y$ and $Z$ be sets. Let $f : X \to Y$ and $g : Y \to Z$. Let $A \subseteq Z$. Then*

$$(g \circ f)^{-1}(A) = f^{-1}(g^{-1}(A)) \ .$$

PROOF:
⟨1⟩1. LET: $X$, $Y$ and $Z$ be sets.
⟨1⟩2. LET: $f : X \to Y$ and $g : Y \to Z$
⟨1⟩3. LET: $A \subseteq Z$
⟨1⟩4. $(g \circ f)^{-1}(A) = f^{-1}(g^{-1}(A))$
  PROOF:
  ⟨2⟩1. LET: $x \in X$
  ⟨2⟩2. $x \in (g \circ f)^{-1}(A) \Leftrightarrow x \in f^{-1}(g^{-1}(A))$
    PROOF:
      $x \in (g \circ f)^{-1}(A) \Leftrightarrow (g \circ f)(x) \in A$
      $\Leftrightarrow g(f(x)) \in A$ (Proposition 3.70, ⟨1⟩2, ⟨2⟩1)
      $\Leftrightarrow f(x) \in g^{-1}(A)$
      $\Leftrightarrow x \in f^{-1}(g^{-1}(A))$
□

**Proposition 3.78.** *Let $f : X \approx Y$ and $g : Y \approx Z$. Then*

$$(gf)^{-1} = f^{-1}g^{-1} : Z \to X \ .$$

PROOF: Easy. □

**Definition 3.79** (Left Inverse, Right Inverse)**.** Let $f : X \to Y$ and $g : Y \to X$. Then $g$ is a *left inverse* of $f$, and $f$ is a *right inverse* of $g$, iff $g \circ f = I_X$.

**Proposition 3.80.** *Let $f : X \to Y$ and $g : Y \to X$. If $gf = I_X$ then $f$ is one-to-one and $g$ maps $Y$ onto $X$.*

PROOF: Easy. □

**Lemma 3.81.** *Let $f : A \to B$. If there are functions $g : B \to A$ and $h : B \to A$ such that $\forall a \in A.g(f(a)) = a$ and $\forall b \in B.f(h(b)) = b$, then $f$ is bijective and $g = h = f^{-1}$.*

PROOF:
⟨1⟩1. LET: $A$ and $B$ be sets.
⟨1⟩2. LET: $f : A \to B$ and $g, h : B \to A$
⟨1⟩3. ASSUME: $\forall a \in A.g(f(a)) = a$
⟨1⟩4. ASSUME: $\forall b \in B.f(h(b)) = b$
⟨1⟩5. $f$ is injective.
  PROOF: Proposition 3.80, ⟨1⟩2, ⟨1⟩3.
⟨1⟩6. $f$ is surjective.
  PROOF: Proposition 3.80, ⟨1⟩2, ⟨1⟩4.
⟨1⟩7. $g = h$
  ⟨2⟩1. LET: $b \in B$
  ⟨2⟩2. $g(b) = h(b)$
    PROOF:

$$\begin{aligned} g(b) &= g(f(h(b))) && (\langle 1\rangle 4, \langle 2\rangle 1) \\ &= h(b) && (\langle 1\rangle 3, \langle 1\rangle 2, \langle 2\rangle 1) \end{aligned}$$

⟨1⟩8. $h = f^{-1}$
  ⟨2⟩1. LET: $b \in B$
  ⟨2⟩2. $f(h(b)) = b$
    PROOF: ⟨1⟩4, ⟨2⟩1
  ⟨2⟩3. $h(b) = f^{-1}(b)$
□

## 3.9 Choice Functions

**Definition 3.82** (Choice Function)**.** A *choice function* for a set $X$ is a function $f : \mathcal{P}X - \{\emptyset\} \to X$ such that $f(S) \in S$ for all $S$.

**Proposition 3.83.** *Every set has a choice function.*

PROOF: Given a nonempty set $X$, apply the Axiom of Choice to the family $\{S\}_{S \in \mathcal{P}X - \{\emptyset\}}$. □

**Proposition 3.84.** *For any relation $R$, there exists a function $f \subseteq R$ such that* $\operatorname{dom} f = \operatorname{dom} R$.

PROOF:
$\langle 1 \rangle 1$. LET: $R$ be a relation.
$\langle 1 \rangle 2$. PICK a choice function $g$ for $\operatorname{ran} R$.
$\langle 1 \rangle 3$. LET: $f : \operatorname{dom} R \to \operatorname{ran} R$ be the function $f(x) = g(\{y \in \operatorname{ran} R : xRy\})$
$\langle 1 \rangle 4$. $f \subseteq R$ and $\operatorname{dom} f = \operatorname{dom} R$.
□

**Proposition 3.85.** *If $\mathcal{C}$ is a set of pairwise disjoint nonempty sets , then there exists a set $A$ such that, for all $C \in \mathcal{C}$, we have $A \cap C$ is a singleton.*

PROOF:
$\langle 1 \rangle 1$. LET: $f$ be a choice function for $\bigcup \mathcal{C}$
$\langle 1 \rangle 2$. LET: $A = \{f(C) : C \in \mathcal{C}\}$
$\langle 1 \rangle 3$. For all $C \in \mathcal{C}$ we have $A \cap C = \{f(C)\}$
□

# Chapter 4

# Equivalence

**Definition 4.1** (Equivalent)**.** Sets $E$ and $F$ are *equivalent*, $E \sim F$, iff there exists a one-to-one correspondence between them.

**Proposition 4.2.** *For any set $X$, equivalence is an equivalence relation on $\mathcal{P}X$.*

PROOF: Easy.

**Theorem 4.3** (Schröder-Bernstein)**.** *Let $X$ and $Y$ be sets. If there exist injective functions $X \to Y$ and $Y \to X$, then $X \sim Y$.*

PROOF:
⟨1⟩1. LET: $f : X \to Y$ and $g : Y \to X$ be one-to-one.
⟨1⟩2. ASSUME: w.l.o.g. $X \cap Y = \varnothing$
⟨1⟩3. For $x \in X$, let us say that $x$ is the *parent* of $f(x)$; and for $y \in Y$, let us say that $y$ is the *parent* of $g(y)$.
⟨1⟩4. For $z \in X \cup Y$, let the set of *descendants* of $z$ be the intersection of all the subsets $S$ of $X \cup Y$ such that $z \in S$ and, if $t \in S$ and $t$ is the parent of $u$ then $u \in S$.
⟨1⟩5. LET: $X_X$ be the set of all elements of $X$ that are descendants of the elements of $X$ that have no parent.
⟨1⟩6. LET: $X_Y$ be the set of all elements of $X$ that are descendants of the elements of $Y$ that have no parent.
⟨1⟩7. LET: $X_\infty = X - X_X - X_Y$
⟨1⟩8. LET: $Y_X$ be the set of all elements of $Y$ that are descendants of the elements of $X$ that have no parent.
⟨1⟩9. LET: $Y_Y$ be the set of all elements of $Y$ that are descendants of the elements of $Y$ that have no parent.
⟨1⟩10. LET: $Y_\infty = Y - Y_X - Y_Y$
⟨1⟩11. $f \restriction X_X : X_X \sim Y_X$
⟨1⟩12. $g \restriction Y_Y : Y_Y \sim X_Y$
⟨1⟩13. $f \restriction X_\infty : X_\infty \sim Y_\infty$
⟨1⟩14. Define $h : X \to Y$ by $h(x) = g^{-1}(x)$ if $x \in X_Y$, and $f(x)$ if not.

$\langle 1 \rangle 15.\ h : X \sim Y$
□

**Theorem 4.4** (Cantor)**.** *For any set $X$ we have $X \not\sim \mathcal{P}X$.*

Proof: If $f : X \to \mathcal{P}X$ then $\{x \in X : x \notin f(x)\}$ is a subset of $X$ not in $\operatorname{ran} f$. □

# Chapter 5

# Order

## 5.1 Partial Orders

**Definition 5.1** (Partial Order)**.** A *partial order* on a set $X$ is a relation on $X$ that is reflexive, antisymmetric and transitive.

A *partially ordered set* or *poset* is a pair $(X, \leqslant)$ such that $\leqslant$ is a partial order on $X$. We write $X$ for the poset $(X, \leqslant)$.

Given a partial order $\leqslant$, we write $\geqslant$ for the inverse of $\leqslant$.

We write $x < y$ or $y > x$ for $x \leqslant y \wedge x \neq y$. When this holds, we say $x$ is *less than* $y$ or *smaller* than $y$; and $y$ is *greater than* $x$, *larger* than $x$.

**Proposition 5.2.** *For any set $X$, the relation $\subseteq$ is a partial order on $\mathcal{P}X$.*

Proof: From Theorems 2.11, 2.12 and 2.13. □

**Proposition 5.3.** *Let $X$ be a set. Let $<$ be a relation on $X$. Then there exists a partial order $\leqslant$ on $X$ such that*

$$\forall x, y \in X(x < y \Leftrightarrow x \leqslant y \wedge x \neq y)$$

*if and only if $<$ is irreflexive and transitive. In this case, $\leqslant$ is unique and is defined by*

$$\forall x, y \in X(x \leqslant y \Leftrightarrow x < y \vee x = y) \ .$$

Proof:

$\langle 1 \rangle 1$. Let: $X$ be a set.

$\langle 1 \rangle 2$. Let: $<$ be a relation on $X$.

$\langle 1 \rangle 3$. If there exists a partial order $\leqslant$ on $X$ such that $\forall x, y \in X(x < y \Leftrightarrow x \leqslant y \wedge x \neq y)$, then $<$ is irreflexive.

Proof: Trivial.

$\langle 1 \rangle 4$. If there exists a partial order $\leqslant$ on $X$ such that $\forall x, y \in X(x < y \Leftrightarrow x \leqslant y \wedge x \neq y)$, then $<$ is transitive.

$\langle 2 \rangle 1$. Let: $\leqslant$ be a partial order on $X$.

$\langle 2 \rangle 2$. Assume: $\forall x, y \in X(x < y \Leftrightarrow x \leqslant y \wedge x \neq y)$

⟨2⟩3. LET: $x < y$ and $y < z$
⟨2⟩4. $x \leqslant y$
PROOF: ⟨2⟩3
⟨2⟩5. $x \neq y$
PROOF: ⟨2⟩3
⟨2⟩6. $y \leqslant z$
PROOF: ⟨2⟩3
⟨2⟩7. $y \neq z$
PROOF: ⟨2⟩3
⟨2⟩8. $x \leqslant z$
PROOF: From ⟨2⟩4 and ⟨2⟩6 since $\leqslant$ is transitive by ⟨2⟩1.
⟨2⟩9. $x \neq z$
⟨3⟩1. ASSUME: for a contradiction $x = z$
⟨3⟩2. $y \leqslant x$
PROOF: ⟨2⟩6, ⟨3⟩1
⟨3⟩3. $x = y$
PROOF: From ⟨2⟩4 and ⟨3⟩2 since $\leqslant$ is antisymmetric by ⟨2⟩1.
⟨3⟩4. Q.E.D.
PROOF: ⟨2⟩5 and ⟨3⟩3 form a contradiction.
⟨2⟩10. $x < z$
PROOF: ⟨2⟩8, ⟨2⟩9
⟨1⟩5. If there exists a partial order $\leqslant$ on $X$ such that $\forall x, y \in X(x < y \Leftrightarrow x \leqslant y \wedge x \neq y)$, then $\forall x, y \in X(x \leqslant y \Leftrightarrow x < y \vee x = y)$.
PROOF: Trivial.
⟨1⟩6. If $<$ is irreflexive and transitive, then the relation $\leqslant$ defined by $\forall x, y \in X(x \leqslant y \Leftrightarrow x < y \vee x = y)$ is a partial order on $X$.
⟨2⟩1. ASSUME: $<$ is irreflexive.
⟨2⟩2. ASSUME: $<$ is transitive.
⟨2⟩3. LET: $\leqslant$ be the relation defined by $\forall x, y \in X(x \leqslant y \Leftrightarrow x < y \vee x = y)$
⟨2⟩4. $\leqslant$ is reflexive.
PROOF: Immediate from ⟨2⟩3.
⟨2⟩5. $\leqslant$ is transitive.
⟨3⟩1. LET: $x, y, z \in X$
⟨3⟩2. ASSUME: $x \leqslant y$ and $y \leqslant z$
⟨3⟩3. $x < y$ or $x = y$
PROOF: ⟨2⟩4, ⟨3⟩2
⟨3⟩4. $y < z$ or $y = z$
PROOF: ⟨2⟩4, ⟨3⟩2
⟨3⟩5. CASE: $x < y$ and $y < z$
⟨4⟩1. $x < z$
PROOF: ⟨2⟩2
⟨4⟩2. $x \leqslant z$
PROOF: ⟨2⟩4, ⟨4⟩1
⟨3⟩6. CASE: $x = y$
PROOF: Then $x \leqslant z$ from ⟨3⟩2
⟨3⟩7. CASE: $y = z$

PROOF: Then $x \leqslant z$ from $\langle 3 \rangle 2$

$\langle 2 \rangle 6$. $\leqslant$ is antisymmetric.

$\langle 3 \rangle 1$. LET: $x, y \in X$

$\langle 3 \rangle 2$. ASSUME: $x \leqslant y$

$\langle 3 \rangle 3$. ASSUME: $y \leqslant x$

$\langle 3 \rangle 4$. $x < y$ or $x = y$

PROOF: $\langle 2 \rangle 4$, $\langle 3 \rangle 2$

$\langle 3 \rangle 5$. $y < x$ or $y = x$

PROOF: $\langle 2 \rangle 4$, $\langle 3 \rangle 2$

$\langle 3 \rangle 6$. $\neg(x < y \wedge y < x)$

$\langle 4 \rangle 1$. ASSUME: for a contradiction $x < y$ and $y < x$

$\langle 4 \rangle 2$. $x < x$

PROOF: $\langle 2 \rangle 2$, $\langle 4 \rangle 1$

$\langle 4 \rangle 3$. Q.E.D.

PROOF: $\langle 2 \rangle 1$ and $\langle 4 \rangle 2$ form a contradiction.

$\langle 3 \rangle 7$. $x = y$

PROOF: $\langle 3 \rangle 4$, $\langle 3 \rangle 5$, $\langle 3 \rangle 6$

$\langle 1 \rangle 7$. If $<$ is irreflexive, then the relation $\leqslant$ defined by $\forall x, y \in X (x \leqslant y \Leftrightarrow x < y \vee x = y)$ satisfies $\forall x, y \in X (x < y \Leftrightarrow x \leqslant y \wedge x \neq y)$.

PROOF: Trivial.

□

**Proposition 5.4.** *In a poset, we never have $x < y$ and $y < x$.*

PROOF: We would then have $x < x$ by transitivity, contradicting the irreflexivity of $<$. □

**Definition 5.5** ((Strict) Initial Segment)**.** Let $X$ be a poset and $a \in X$. The *(strict) initial segment* determined by $a$ is

$$s(a) := \{x \in X : x < a\} \ .$$

**Definition 5.6** (Weak Initial Segment)**.** Let $X$ be a poset and $a \in X$. The *weak initial segment* determined by $a$ is

$$\overline{s}(a) := \{x \in X : x \leqslant a\} \ .$$

**Definition 5.7** (Immediate Successor)**.** Let $X$ be a poset and $x, y \in X$. Then $y$ is the *(immediate) successor* of $x$, and $x$ is the *(immediate) predecessor* of $y$, iff $x < y$ and there is no $z$ such that $x < z < y$.

**Definition 5.8** (Least)**.** Let $X$ be a partial order and $a \in X$. Then $a$ is *least* in $X$ iff $\forall x \in X . a \leqslant x$.

**Proposition 5.9.** *A poset has at most one least element.*

PROOF: If $a$ and $b$ are least then $a \leqslant b$ and $b \leqslant a$, hence $a = b$. □

**Definition 5.10** (Greatest)**.** Let $X$ be a partial order and $a \in X$. Then $a$ is *greatest* in $X$ iff $\forall x \in X . x \leqslant a$.

**Proposition 5.11.** *A poset has at most one greatest element.*

PROOF: If $a$ and $b$ are greatest then $a \leqslant b$ and $b \leqslant a$, hence $a = b$. □

**Definition 5.12** (Minimal)**.** Let $X$ be a poset and $a \in X$. Then $a$ is *minimal* iff there is no $x \in X$ such that $x < a$.

**Definition 5.13** (Maximal)**.** Let $X$ be a poset and $a \in X$. Then $a$ is *maximal* iff there is no $x \in X$ such that $a < x$.

**Definition 5.14** (Lower Bound)**.** Let $X$ be a poset. Let $E \subseteq X$ and $a \in X$. Then $a$ is a *lower bound* for $E$ iff $\forall x \in E.a \leqslant x$.

**Definition 5.15** (Upper Bound)**.** Let $X$ be a poset. Let $E \subseteq X$ and $a \in X$. Then $a$ is an *upper bound* for $E$ iff $\forall x \in E.x \leqslant a$.

**Definition 5.16** (Greatest Lower Bound, Infimum)**.** Let $X$ be a poset. Let $E \subseteq X$ and $a \in X$. Then $a$ is the *greatest lower bound* or *infimum* for $E$ iff $a$ is the greatest element in the set of lower bounds for $E$.

**Definition 5.17** (Least Upper Bound, Supremum)**.** Let $X$ be a poset. Let $E \subseteq X$ and $a \in X$. Then $a$ is the *least upper bound* or *supremum* for $E$ iff $a$ is the least element in the set of upper bounds for $E$.

## 5.2 Linear Orders

**Definition 5.18** (Linear Order)**.** A partial order $\leqslant$ on a set $X$ is a *linear order*, *total order* or *simple order* iff, for all $x, y \in X$, either $x \leqslant y$ or $y \leqslant x$. We then call the poset $(X, \leqslant)$ a *linearly ordered set* or a *chain*.

**Proposition 5.19.** *Let $R$ be a partial order on $X$. Then $R$ is total if and only if $X^2 \subseteq R \cup R^{-1}$.*

PROOF: Easy. □

**Proposition 5.20.** *Let $X$ be a set and $<$ a relation on $X$. Then there exists a linear order $\leqslant$ on $X$ such that*

$$\forall x, y \in X.(x < y \Leftrightarrow x \leqslant y \wedge x \neq y)$$

*if and only if $<$ is irreflexive, transitive, and:*

$$\forall x, y \in X.(x < y \vee x = y \vee y < x) \ .$$

*In this case, $\leqslant$ is unique and is defined by*

$$\forall x, y \in X.(x \leqslant y \Leftrightarrow x < y \vee x = y)$$

PROOF:
$\langle 1 \rangle 1$. LET: $X$ be a set.

⟨1⟩2. LET: $<$ be a relation on $X$

⟨1⟩3. If there exists a linear order $\leqslant$ on $X$ such that $\forall x, y \in X(x < y \Leftrightarrow x \leqslant y \wedge x \neq y)$, then $<$ is irreflexive.

PROOF: Trivial.

⟨1⟩4. If there exists a linear order $\leqslant$ on $X$ such that $\forall x, y \in X(x < y \Leftrightarrow x \leqslant y \wedge x \neq y)$, then $<$ is transitive.

⟨2⟩1. LET: $\leqslant$ be a linear order on $X$.

⟨2⟩2. ASSUME: $\forall x, y \in X(x < y \Leftrightarrow x \leqslant y \wedge x \neq y)$

⟨2⟩3. LET: $x < y$ and $y < z$

⟨2⟩4. $x \leqslant y$

PROOF: ⟨2⟩3

⟨2⟩5. $x \neq y$

PROOF: ⟨2⟩3

⟨2⟩6. $y \leqslant z$

PROOF: ⟨2⟩3

⟨2⟩7. $y \neq z$

PROOF: ⟨2⟩3

⟨2⟩8. $x \leqslant z$

PROOF: From ⟨2⟩4 and ⟨2⟩6 since $\leqslant$ is transitive.

⟨2⟩9. $x \neq z$

⟨3⟩1. ASSUME: for a contradiction $x = z$

⟨3⟩2. $y \leqslant x$

PROOF: ⟨2⟩6, ⟨3⟩1

⟨3⟩3. $x = y$

PROOF: From ⟨2⟩4 and ⟨3⟩2 since $\leqslant$ is antisymmetric.

⟨3⟩4. Q.E.D.

PROOF: ⟨2⟩5 and ⟨3⟩3 form a contradiction.

⟨2⟩10. $x < z$

PROOF: ⟨2⟩8, ⟨2⟩9

⟨1⟩5. If there exists a linear order $\leqslant$ on $X$ such that $\forall x, y \in X(x < y \Leftrightarrow x \leqslant y \wedge x \neq y)$, then $\forall x, y \in X(x < y \vee x = y \vee y < x)$.

⟨2⟩1. LET: $\leqslant$ be a linear order on $X$.

⟨2⟩2. ASSUME: $\forall x, y \in X(x < y \Leftrightarrow x \leqslant y \wedge x \neq y)$

⟨2⟩3. LET: $x, y \in X$

⟨2⟩4. $x \leqslant y$ or $y \leqslant x$

⟨2⟩5. CASE: $x \leqslant y$

PROOF: Then $x < y$ or $x = y$ using ⟨2⟩2.

⟨2⟩6. CASE: $y \leqslant x$

PROOF: Then $y < x$ or $x = y$ using ⟨2⟩2.

⟨1⟩6. If there exists a linear order $\leqslant$ on $X$ such that $\forall x, y \in X(x < y \Leftrightarrow x \leqslant y \wedge x \neq y)$, then $\forall x, y \in X(x \leqslant y \Leftrightarrow x < y \vee x = y)$.

PROOF: Trivial.

⟨1⟩7. If $<$ is irreflexive, transitive and satisfies $\forall x, y \in X.(x < y \vee x = y \vee y < x)$, then the relation $\leqslant$ defined by $\forall x, y(x \leqslant y \Leftrightarrow x < y \vee x = y)$ is a linear order on $X$.

⟨2⟩1. ASSUME: $<$ is irreflexive.

⟨2⟩2. ASSUME: $<$ is transitive.
⟨2⟩3. ASSUME: $\forall x, y \in X(x < y \vee x = y \vee y < x)$
⟨2⟩4. LET: $\leqslant$ be the relation defined by $\forall x, y(x \leqslant y \Leftrightarrow x < y \vee x = y)$
⟨2⟩5. $\leqslant$ is reflexive.
PROOF: Immediate from ⟨2⟩4.
⟨2⟩6. $\leqslant$ is transitive.
⟨3⟩1. LET: $x, y, z \in X$
⟨3⟩2. ASSUME: $x \leqslant y$ and $y \leqslant z$
⟨3⟩3. $x < y$ or $x = y$
PROOF: ⟨2⟩4, ⟨3⟩2
⟨3⟩4. $y < z$ or $y = z$
PROOF: ⟨2⟩4, ⟨3⟩2
⟨3⟩5. CASE: $x < y$ and $y < z$

⟨3⟩2. $x < y$ or $x = y$ or $y < x$
PROOF: ⟨2⟩3, ⟨3⟩1
⟨3⟩3. $x \leqslant y$ or $y \leqslant x$
PROOF: ⟨2⟩4, ⟨3⟩2
□

**Theorem 5.21** (Zorn's Lemma)**.** *Let $X$ be a poset such that every chain in $X$*

*has an upper bound. Then $X$ has a maximal element.*

PROOF:
⟨1⟩1. PICK a choice function $f$ for $X$.
⟨1⟩2. LET: $\mathcal{X}$ be the set of chains in $X$.
⟨1⟩3. For all $A \in \mathcal{X}$,
LET: $\hat{A} = \{x \in X : A \cup \{x\} \in \mathcal{X}\}$
⟨1⟩4. LET: $g : \mathcal{X} \to \mathcal{X}$ be the function

$$g(A) = \begin{cases} A \cup \{f(\hat{A} - A)\} & \text{if } \hat{A} - A \neq \varnothing \\ A & \text{if } \hat{A} - A = \varnothing \end{cases}$$

⟨1⟩5. For $\mathcal{T} \subseteq \mathcal{X}$, let us say $\mathcal{T}$ is a *tower* iff:

- $\varnothing \in \mathcal{T}$
- $\forall A \in \mathcal{T}.g(A) \in \mathcal{T}$
- For every chain $\mathcal{C}$ in $\mathcal{T}$, we have $\bigcup \mathcal{C} \in \mathcal{T}$

⟨1⟩6. LET: $\mathcal{T}_0$ be the intersection of the set of all towers.
PROOF: The set of all towers is nonempty since $\mathcal{X}$ is a tower.
⟨1⟩7. LET: $A = \bigcup \mathcal{T}_0$
⟨1⟩8. $A$ is a chain in $X$.
⟨2⟩1. $\mathcal{T}_0$ is a chain under $\subseteq$
⟨3⟩1. Given $C \in \mathcal{T}_0$, let us say that $C$ is *comparable* iff, for all $A \in \mathcal{T}_0$, either $A \subseteq C$ or $C \subseteq A$.
⟨3⟩2. For all $A, C \in \mathcal{T}_0$, if $C$ is comparable and $A \subsetneq C$ then $g(A) \subseteq C$.
PROOF: Since $g(A) - A$ has at most one element, so if $A \subsetneq C \subseteq g(A)$ then $C = g(A)$.
⟨3⟩3. For $C \in \mathcal{T}_0$ comparable,
LET: $\mathcal{U}_C = \{A \in \mathcal{T}_0 : A \subseteq C \vee g(C) \subseteq A\}$
⟨3⟩4. For $C \in \mathcal{T}_0$ comparable, $\mathcal{U}_C$ is a tower.
⟨4⟩1. LET: $C \in \mathcal{T}_0$ be comparable
⟨4⟩2. $\varnothing \in \mathcal{U}_C$
PROOF: Since $\varnothing \subseteq C$.
⟨4⟩3. $\forall A \in \mathcal{U}_C.g(A) \in \mathcal{U}_C$
PROOF: By ⟨1⟩8.
⟨4⟩4. For every chain $\mathcal{C} \subseteq \mathcal{U}_C$ we have $\bigcup \mathcal{C} \in \mathcal{U}_C$
⟨5⟩1. LET: $\mathcal{C} \subseteq \mathcal{U}_C$ be a chain.
⟨5⟩2. CASE: $\exists A \in \mathcal{C}.g(C) \subseteq A$
PROOF: Then $g(C) \subseteq \bigcup \mathcal{C}$
⟨5⟩3. CASE: $\forall A \in \mathcal{C}.A \subseteq C$
PROOF: Then $\bigcup \mathcal{C} \subseteq C$.
⟨3⟩5. For $C \in \mathcal{T}_0$ comparable, $\mathcal{U}_C = \mathcal{T}_0$.
⟨3⟩6. For $C \in \mathcal{T}_0$ comparable we have $g(C)$ is comparable.
PROOF: Since for all $A \in \mathcal{T}_0$ either $A \subseteq C \subseteq g(C)$ or $g(C) \subseteq A$.
⟨3⟩7. The set of comparable sets in $\mathcal{T}_0$ is a tower.
⟨4⟩1. $\varnothing$ is comparable.
PROOF: $\forall A \in \mathcal{T}_0.\varnothing \subseteq A$

⟨4⟩2. For all $C \in \mathcal{T}_0$, if $A$ is comparable then $g(C)$ is comparable.
PROOF: ⟨3⟩6
⟨4⟩3. For every chain $\mathcal{C} \subseteq \mathcal{T}_0$ of comparable sets, we have $\bigcup \mathcal{C}$ is comparable.
⟨5⟩1. LET: $\mathcal{C} \subseteq \mathcal{T}_0$ be a chain of comparable sets.
⟨5⟩2. LET: $A \in \mathcal{T}_0$
⟨5⟩3. CASE: there exists $C \in \mathcal{C}$ such that $A \subseteq C$
PROOF: Then $A \subseteq \bigcup \mathcal{C}$.
⟨5⟩4. CASE: for all $C \in \mathcal{C}$ we have $C \subseteq A$
PROOF: Then $\bigcup \mathcal{C} \subseteq A$.
⟨3⟩8. Every set in $\mathcal{T}_0$ is comparable.
⟨2⟩2. LET: $x, y \in A$
⟨2⟩3. PICK $A, C \in \mathcal{T}_0$ such that $x \in A$ and $y \in C$
⟨2⟩4. ASSUME: w.l.o.g. $A \subseteq C$
⟨2⟩5. $x, y \in C$
⟨2⟩6. $x \leqslant y$ or $y \leqslant x$
PROOF: Since $C \in \mathcal{X}$ so $C$ is a chain.
⟨1⟩9. PICK an upper bound $u$ for $A$.
⟨1⟩10. $A \in \mathcal{T}_0$
PROOF: Since $\mathcal{T}_0$ is a chain in $\mathcal{T}_0$ so $\bigcup \mathcal{T}_0 \in \mathcal{T}_0$.
⟨1⟩11. $g(A) \in \mathcal{T}_0$
⟨1⟩12. $g(A) \subseteq A$
⟨1⟩13. $g(A) = A$
⟨1⟩14. $\hat{A} - A = \varnothing$
⟨1⟩15. $u \in A$
PROOF: Since $A \cup \{u\}$ is a chain so $u \in \hat{A}$ and therefore $u \in A$.
⟨1⟩16. $u$ is maximal in $X$.
⟨2⟩1. LET: $x \in X$
⟨2⟩2. ASSUME: $u \leqslant x$
⟨2⟩3. $A \cup \{x\}$ is a chain.
⟨2⟩4. $x \in A$
⟨2⟩5. $x \leqslant u$
⟨2⟩6. $x = u$
□

**Definition 5.22** (Cofinal)**.** Let $X$ be a poset and $A \subseteq X$. Then $A$ is *cofinal* iff, for all $x \in X$, there exists $a \in A$ such that $x \leqslant a$.

**Definition 5.23** (Order Isomorphism)**.** Two posets $X$ and $Y$ are *(order) isomorphic*, $X \cong Y$ iff there exists an order preserving one-to-one correspondence $f$ between them. We write $f : X \cong Y$ and call $f$ a *(order) isomorphism*.

**Proposition 5.24.** *Let $X$ and $Y$ be posets. Let $f$ be a one-to-one correspondence between $X$ and $Y$. Then $f$ is a similarity if and only if, for all $x, y \in X$, we have $x < y$ iff $f(x) < f(y)$.*

PROOF: Easy. □

**Proposition 5.25.** *For any poset $X$ we have $I_X : X \cong X$.*

PROOF: Easy. □

**Proposition 5.26.** *If $f : X \cong Y$ then $f^{-1} : Y \cong X$.*

PROOF: Easy. □

**Proposition 5.27.** *If $f : X \cong Y$ and $g : Y \cong Z$ then $g \circ f : X \cong Z$.*

PROOF: Easy. □

**Corollary 5.27.1.** *For any set $E$, similarity is an equivalence relation on the set of all posets that are subsets of $E$.*

**Definition 5.28** (Open Interval)**.** Let $X$ be a linearly ordered set. Let $a, b \in X$ with $a < b$. The *open interval* $(a, b)$ is

$$(a, b) := \{x \in X : a < x < b\} \ .$$

**Definition 5.29** (Lexicographical Order)**.** Let $A$ and $B$ be linearly ordered sets. The *lexicographical* order on $A \times B$ is the relation $\leqslant$ defined by $(a, b) \leqslant (x, y)$ iff $a < x$ or $(a = x$ and $b \leqslant y)$.

**Definition 5.30** (Least Upper Bound Property)**.** A linearly ordered set $A$ has the *least upper bound property* iff every nonempty subset of $A$ bounded above has a least upper bound.

**Proposition 5.31.** *Let $A$ be a linearly ordered set. Then $A$ has the least upper bound property if and only if every nonempty subset of $A$ bounded below has a greatest lower bound.*

PROOF:
⟨1⟩1. For any linearly ordered set $A$, if $A$ has the least upper bound property then every nonempty subset of $A$ bounded below has a greatest lower bound.
  ⟨2⟩1. LET: $A$ be a linearly ordered set.
  ⟨2⟩2. ASSUME: $A$ has the least upper bound property.
  ⟨2⟩3. LET: $S$ be a nonempty subset of $A$ bounded below.
  ⟨2⟩4. LET: $S\downarrow$ be the set of all lower bounds for $S$.
  ⟨2⟩5. $S\downarrow \neq \varnothing$
    PROOF: Since $S$ is bounded below by ⟨2⟩3.
  ⟨2⟩6. $S\downarrow$ is bounded above.
    ⟨3⟩1. PICK $s \in S$
      PROOF: $S$ is nonempty by ⟨2⟩3.
    ⟨3⟩2. $s$ is an upper bound for $S\downarrow$.
  ⟨2⟩7. LET: $l$ be the supremum of $S\downarrow$.
    PROOF: ⟨2⟩2, ⟨2⟩5, ⟨2⟩6
  ⟨2⟩8. $l$ is a lower bound for $S$.
    ⟨3⟩1. LET: $s \in S$

⟨3⟩2. $s$ is an upper bound for $S\downarrow$
⟨3⟩3. $l \leqslant s$
PROOF: ⟨2⟩7, ⟨3⟩2
⟨2⟩9. For any lower bound $l'$ for $S$ we have $l' \leqslant l$.
PROOF: Since $l$ is an upper bound for $S\downarrow$ by ⟨2⟩7.
⟨1⟩2. For any linearly ordered set $A$, if every nonempty subset of $A$ bounded below has a greatest lower bound then $A$ has the least upper bound property.
⟨2⟩1. LET: $(A, \leqslant)$ be a linearly ordered set.
⟨2⟩2. ASSUME: Every nonempty subset of $A$ bounded below has a greatest lower bound.
⟨2⟩3. $(A, \geqslant)$ has the least upper bound property.
⟨2⟩4. Every nonempty subset of $A$ bounded below with respect to $\geqslant$ has ¡a greatest lower bound with respect to $\geqslant$.
⟨2⟩5. Every nonempty subset of $A$ bounded above with respect to $\leqslant$ has a least upper bound with respect to $\leqslant$.
□

## 5.3 Linear Continua

**Definition 5.32** (Linear Continuum)**.** A *linear continuum* is a linearly ordered set $X$ with the least upper bound property such that, for all $x, y \in X$, if $x < y$ then there exists $z \in X$ such that $x < z < y$.

## 5.4 Well Orderings

**Definition 5.33** (Well Ordered Set)**.** A poset $X$ is *well ordered*, and its ordering is a *well ordering*, iff every nonempty subset of $X$ has a least element.

**Proposition 5.34.** *Every well ordered set is totally ordered.*

PROOF: For all $x$ and $y$ we have $\{x, y\}$ has a least element, so $x \leqslant y$ or $y \leqslant x$. □

**Theorem 5.35** (Transfinite Induction)**.** *Let $X$ be a well ordered set. Let $S \subseteq X$ satisfy:*

$$\forall x \in X(\forall y < x.y \in S) \Rightarrow x \in S \ .$$

*Then $S = X$.*

PROOF: We have $X - S$ has no least element, so $X - S = \varnothing$. □

**Definition 5.36** (Continuation)**.** Let $A$ and $B$ be well ordered sets. Then $B$ is a *continuation* of $A$ iff there exists $b \in B$ such that $A = s(b)$ and the order on $A$ is the restriction of the order on $B$ to $A$.

**Proposition 5.37.** *Let $\mathcal{C}$ be a set of well ordered sets that is totally ordered under continuation. Then there exists a unique well ordering on $\bigcup \mathcal{C}$ such that $\bigcup \mathcal{C}$ is a continuation of every element of $\mathcal{C}$.*

PROOF: Define $\leqslant$ on $\bigcup \mathcal{C}$ by: $x \leqslant y$ iff there exists $C \in \mathcal{C}$ such that $x, y \in C$ and $x \leqslant y$ in $C$. □

**Proposition 5.38.** *Every totally ordered set has a cofinal well ordered subset.*

PROOF:
⟨1⟩1. LET: $X$ be a totally ordered set.
⟨1⟩2. LET: $\mathcal{C}$ be the poset of all well ordered subsets of $X$ under continuation.
⟨1⟩3. Every chain in $\mathcal{C}$ has an upper bound.
  PROOF: Proposition 5.37.
⟨1⟩4. PICK a maximal element $C$ of $\mathcal{C}$
    PROVE: $C$ is cofinal
  PROOF: Zorn's Lemma
⟨1⟩5. LET: $x \in X$
⟨1⟩6. We cannot have $\forall c \in C.c < x$
  PROOF: Then $C \cup \{x\}$ would be a larger chain.
⟨1⟩7. $\exists c \in C.x \leqslant c$
□

**Theorem 5.39** (Well Ordering Theorem)**.** *Every set can be well ordered.*

PROOF:
⟨1⟩1. LET: $X$ be a set.
⟨1⟩2. LET: $\mathcal{W}$ be the poset of all well ordered subsets of $X$ under continuation.
⟨1⟩3. Every chain in $\mathcal{W}$ has an upper bound.
  PROOF: Proposition 5.37.
⟨1⟩4. PICK a maximal $M \in \mathcal{W}$
  PROOF: Zorn's Lemma
⟨1⟩5. $M = X$
  PROOF: If $x \in X - M$ then $M \cup \{x\}$ with $x$ as the greatest element is a continuation of $M$.
□

**Theorem 5.40** (Transfinite Recursion)**.** *Let $W$ be a well ordered set and $X$ a set. Let $S$ be the set of all functions $f$ such that* $\operatorname{ran} f \subseteq X$*, and there exists $a \in W$ such that* $\operatorname{dom} f = s(a)$*. Then there exists a unique function $U : W \to X$ such that*

$$\forall a \in W.U(a) = f(U \restriction s(a)) \ .$$

PROOF:
⟨1⟩1. Let us say that a subset $A \subseteq W \times X$ is *$f$-closed* iff, whenever $a \in W$ and $t : s(a) \to X$ satisfies $\forall c < a.(c, t(c)) \in A$, then $(a, f(t)) \in A$.
⟨1⟩2. LET: $U$ be the intersection of the set of $f$-closed subsets of $W \times X$
  PROOF: This set is nonempty since $W \times X$ is $f$-closed.
⟨1⟩3. $U$ is $f$-closed.
⟨1⟩4. $U$ is a function.
  ⟨2⟩1. LET: $P(a)$ be the property: there is at most one $x \in X$ such that $(a, x) \in U$

⟨2⟩2. LET: $a \in W$
⟨2⟩3. ASSUME: as transfinite induction hypothesis $\forall c < a.P(c)$
⟨2⟩4. LET: $(a, x), (a, y) \in U$
⟨2⟩5. $x = f(U \restriction c)$
PROOF: If not then $U - \{(a, x)\}$ would be $f$-closed.
⟨2⟩6. $y = f(U \restriction c)$
⟨2⟩7. $x = y$
⟨1⟩5. $\operatorname{dom} U = W$
⟨2⟩1. LET: $a \in W$
⟨2⟩2. ASSUME: as transfinite induction hypothesis $\forall c < a.c \in \operatorname{dom} U$
⟨2⟩3. $(a, f(U \restriction s(a))) \in U$
⟨1⟩6. If $U' : W \to X$ and $\forall a \in W.U'(a) = f(U' \restriction s(a))$, then $U' = U$.
PROOF: Prove $U'(a) = U(a)$ by transfinite induction on $a$.
□

**Proposition 5.41.** *Let $X$ be a well ordered set and $f$ a similarity between $X$ and a subset of $X$. Then, for all $a \in X$, we have $a \leqslant f(a)$.*

PROOF:
⟨1⟩1. LET: $a \in X$
⟨1⟩2. ASSUME: as transfinite induction hypothesis $\forall c < a.c \leqslant f(c)$
⟨1⟩3. ASSUME: for a contradiction $f(a) < a$
⟨1⟩4. $f(a) \leqslant f(f(a))$
PROOF: ⟨1⟩2
⟨1⟩5. $f(f(a)) < f(a)$
PROOF: From ⟨1⟩3 since $f$ is a similarity.
⟨1⟩6. Q.E.D.
PROOF: This is a contradiction.
□

**Proposition 5.42.** *Let $X$ and $Y$ be well ordered sets. Then there is at most one similarity between them.*

PROOF:
⟨1⟩1. LET: $f, g : X \cong Y$
PROVE: $\forall a \in X.f(a) = g(a)$
⟨1⟩2. LET: $a \in X$
⟨1⟩3. ASSUME: as transfinite induction hypothesis $\forall c < a.f(c) = g(c)$
⟨1⟩4. $f(a)$ is the least element of $Y - \{f(c) : c < a\}$
⟨1⟩5. $g(a)$ is the least element of $Y - \{g(c) : c < a\}$
⟨1⟩6. $f(a) = g(a)$
□

**Proposition 5.43.** *A well ordered set is not similar to any of its initial segments.*

PROOF:
⟨1⟩1. LET: $X$ be a well ordered set.

⟨1⟩2. ASSUME: for a contradiction $f : X \cong s(a)$ for some $a \in X$
⟨1⟩3. $f(a) < a$
⟨1⟩4. Q.E.D.
PROOF: This contradicts Proposition 5.41.
□

**Theorem 5.44** (Comparability Theorem)**.** *Given well ordered sets $X$ and $Y$, either $X \cong Y$, or $X$ is similar to an initial segment of $Y$, or $Y$ is similar to an initial segment of $X$.*

PROOF:
⟨1⟩1. LET: $X_0 = \{a \in X : \exists b \in Y. s(a) \cong s(b)\}$
⟨1⟩2. LET: $U : X_0 \to Y$ be the function: for $a \in X_0$, we have $U(a)$ is the unique element in $Y$ such that $s(a) \cong s(U(a))$
⟨1⟩3. LET: $Y_0 = \operatorname{ran} U$
⟨1⟩4. Either $X_0 = X$ or there exists $a \in X$ such that $X_0 = s(a)$
  ⟨2⟩1. ASSUME: $X_0 \neq X$
  ⟨2⟩2. LET: $a$ be the least element of $X - X_0$
  ⟨2⟩3. LET: $x \in X_0$
    PROVE: $x < a$
  ⟨2⟩4. PICK $f : s(x) \cong s(U(x))$
  ⟨2⟩5. ASSUME: for a contradiction $a < x$
  ⟨2⟩6. $f \restriction s(a) : s(a) \cong s(f(a))$
  ⟨2⟩7. $a \in X_0$
  ⟨2⟩8. Q.E.D.
    PROOF: This is a contradiction.
⟨1⟩5. Either $Y_0 = Y$ or there exists $b \in Y$ such that $Y_0 = s(b)$
  PROOF: Similar.
⟨1⟩6. CASE: $X_0 = X$ and $Y_0 = Y$
  PROOF: Then $U : X \cong Y$.
⟨1⟩7. CASE: $X_0 = X$ and $Y_0 \neq Y$
  PROOF: Then $U : X \cong s(b)$ where $Y_0 = s(b)$.
⟨1⟩8. CASE: $X_0 \neq X$ and $Y_0 = Y$
  PROOF: Then $U : s(a) \cong Y$ where $X_0 = s(a)$.
⟨1⟩9. CASE: $X_0 \neq X$ and $Y_0 \neq Y$
  ⟨2⟩1. LET: $X_0 = s(a)$ and $Y_0 = s(b)$
  ⟨2⟩2. $U : s(a) \cong s(b)$
  ⟨2⟩3. $a \in X_0$
  ⟨2⟩4. Q.E.D.
    PROOF: This is a contradiction.
□

**Corollary 5.44.1.** *Let $X$ be a well ordered set. Then any subset $A$ of $X$ is either similar to $X$ or to an initial segment of $X$.*

PROOF: We cannot have $X$ is similar to an initial segment of $A$, say $f : X \cong \{x \in A : x < a\}$, because then we would have $f(a) < a$ contradicting Proposition 5.41. □

**Corollary 5.44.2.** *For any sets $X$ and $Y$, either there exists an injective function $X \to Y$, or there exists an injective function $Y \to X$.*

PROOF: Using the Well Ordering Theorem. □

# Chapter 6

# Natural Numbers

## 6.1 Natural Numbers

**Definition 6.1** (Successor)**.** The *successor* of a set $x$, $x^+$, is defined by

$$x^+ := x \cup \{x\} \ .$$

**Definition 6.2.** We define

$$0 = \varnothing$$
$$1 = 0^+$$
$$2 = 1^+$$

etc.

**Definition 6.3** (Characteristic Function)**.** Let $X$ be a set and $A \subseteq X$. The *characteristic function* of $A$ is the function $\chi_A : X \to 2$ defined by

$$\chi_A(x) = \begin{cases} 1 & \text{if } x \in A \\ 0 & \text{if } x \notin A \end{cases}$$

**Theorem 6.4.** *Let $X$ be a set. The function $\chi : \mathcal{P}X \to 2^X$ that maps a subset $A$ of $X$ to $\chi_A$ is a one-to-one correspondence.*

Proof: Easy. □

**Definition 6.5.** The set $\omega$ of *natural numbers* is the set such that:

- $0 \in \omega$
- For all $n \in \omega$ we have $n^+ \in \omega$
- For any set $X$, if $0 \in X$ and $\forall n \in X . n^+ \in X$ then $\omega \subseteq X$

PROOF: To show this exists, pick a set $A$ such that $0 \in A$ and $\forall n \in A.n^+ \in A$ (by the Axiom of Infinity), and let $\omega = \bigcap\{X \in \mathcal{P}A : 0 \in X \wedge \forall n \in X.n^+ \in X\}$. □

**Definition 6.6** (Sequence)**.** A *finite sequence* is a family whose index set is a natural number. For $n$ a natural number, an *$n$-tuple* is a family whose index set is $n$.

An *infinite sequence* is a family whose index set is $\omega$.

Given a finite sequence of sets $\{A_i\}_{i\in n^+}$, we write $\bigcup_{i=0}^{n} A_i$ for $\bigcup_{i\in n^+} A_i$. Given an infinite sequence of sets $\{A_i\}_{i\in\omega}$, we write $\bigcup_{i=0}^{\infty} A_i$ for $\bigcup_{i\in\omega} A_i$.

We make similar definitions for $\bigcap$ and $\times$.

**Proposition 6.7.** *For any natural numbers $m$ and $n$, if $m \in n$ then $m^+ \in n^+$.*

PROOF:
⟨1⟩1. LET: $P(n)$ be the property $\forall m \in n.m^+ \in n^+$
⟨1⟩2. $P(0)$
  PROOF: Vacuous.
⟨1⟩3. For any natural number $n$, if $P(n)$ then $P(n^+)$.
  ⟨2⟩1. LET: $n$ be a natural number.
  ⟨2⟩2. ASSUME: $P(n)$
  ⟨2⟩3. LET: $m \in n^+$
  ⟨2⟩4. $m \in n$ or $m = n$
  ⟨2⟩5. $m^+ \in n^+$ or $m^+ = n^+$
    PROOF: ⟨2⟩2
  ⟨2⟩6. CASE: $m^+ \in n^{++}$
□

**Theorem 6.8** (Principle of Mathematical Induction)**.** *For any subset $S$ of $\omega$, if $0 \in S$ and $\forall n \in S.n^+ \in S$, then $S = \omega$.*

PROOF: From the definition of $\omega$. □

**Proposition 6.9.**

$$\forall n \in \omega.\forall x \in n.n \nsubseteq x$$

PROOF:
⟨1⟩1. $\forall x \in 0.0 \nsubseteq x$
  PROOF: Vacuous.
⟨1⟩2. For any natural number $n$, if $\forall x \in n.n \nsubseteq x$ then $\forall x \in n^+.n^+ \nsubseteq x$.
  ⟨2⟩1. LET: $n$ be a natural number.
  ⟨2⟩2. ASSUME: $\forall x \in n.n \nsubseteq x$
  ⟨2⟩3. LET: $x \in n^+$
  ⟨2⟩4. ASSUME: for a contradiction $n^+ \subseteq x$
  ⟨2⟩5. $x \in n$ or $x = n$
  ⟨2⟩6. CASE: $x \in n$
    PROOF: Then we have $n \subseteq n^+ \subseteq x$ contradicting ⟨2⟩2.
  ⟨2⟩7. CASE: $x = n$

PROOF: Then we have $n \in n^+ \subseteq x = n$ and $n \subseteq n$ contradicting $\langle 2 \rangle 2$.
□

**Corollary 6.9.1.** *For any natural number $n$ we have $n \notin n$.*

**Corollary 6.9.2.** *For any natural number $n$ we have $n \neq n^+$.*

**Definition 6.10** (Transitive Set)**.** A set $E$ is a *transitive* set iff, whenever $x \in y \in E$, then $x \in E$.

**Proposition 6.11.** *Every natural number is a transitive set.*

PROOF:
$\langle 1 \rangle 1$. 0 is a transitive set.
  PROOF: Vacuously, if $x \in y \in 0$ then $x \in 0$.
$\langle 1 \rangle 2$. For any natural number $n$, if $n$ is a transitive set, then $n^+$ is a transitive set.
  $\langle 2 \rangle 1$. LET: $n$ be a natural number.
  $\langle 2 \rangle 2$. ASSUME: $n$ is a transitive set.
  $\langle 2 \rangle 3$. LET: $x \in y \in n^+$
  $\langle 2 \rangle 4$. $y \in n$ or $y = n$
  $\langle 2 \rangle 5$. CASE: $y \in n$
    $\langle 3 \rangle 1$. $x \in n$
      PROOF: $\langle 2 \rangle 2$, $\langle 2 \rangle 3$, $\langle 2 \rangle 5$.
    $\langle 3 \rangle 2$. $x \in n^+$
  $\langle 2 \rangle 6$. CASE: $y = n$
    $\langle 3 \rangle 1$. $x \in n$
      PROOF: $\langle 2 \rangle 3$, $\langle 2 \rangle 6$
    $\langle 3 \rangle 2$. $x \in n^+$
□

**Proposition 6.12.** *For any natural numbers $m$ and $n$, if $m^+ = n^+$ then $m = n$.*

PROOF:
$\langle 1 \rangle 1$. LET: $m$ and $n$ be natural numbers.
$\langle 1 \rangle 2$. ASSUME: $m^+ = n^+$
$\langle 1 \rangle 3$. $m \in m^+ = n^+$
$\langle 1 \rangle 4$. $m \in n$ or $m = n$
$\langle 1 \rangle 5$. $n \in n^+ = m^+$
$\langle 1 \rangle 6$. $n \in m$ or $n = m$
$\langle 1 \rangle 7$. We cannot have $m \in n$ and $n \in m$
  $\langle 2 \rangle 1$. ASSUME: for a contradiction $m \in n$ and $n \in m$
  $\langle 2 \rangle 2$. $m \in m$
    PROOF: Since $m$ is a transitive set (Proposition 6.11).
  $\langle 2 \rangle 3$. Q.E.D.
    PROOF: This contradicts Proposition 6.9.
$\langle 1 \rangle 8$. $m = n$
□

**Theorem 6.13** (Recursion Theorem)**.** *Let $X$ be a set. Let $a \in X$. Let $f : X \to X$. There exists a function $u : \omega \to X$ such that $u(0) = a$ and, for all $n \in \omega$, we have $u(n^+) = f(u(n))$.*

PROOF:
$\langle 1 \rangle 1$. LET: $\mathcal{C} = \{A \in \mathcal{P}(\omega \times X) : (0, a) \in A \wedge \forall n \in \omega . \forall x \in X . (n, x) \in A \Rightarrow (n^+, f(x)) \in A\}$
$\langle 1 \rangle 2$. $\mathcal{C} \neq \varnothing$
  PROOF: $\omega \times X \in \mathcal{C}$
$\langle 1 \rangle 3$. LET: $u = \bigcap \mathcal{C}$
$\langle 1 \rangle 4$. $u \in \mathcal{C}$
$\langle 1 \rangle 5$. $u$ is a function.
  $\langle 2 \rangle 1$. LET: $P(n)$ be the property: $\forall x, y \in X . (n, x) \in u \wedge (n, y) \in u \Rightarrow x = y$
  $\langle 2 \rangle 2$. $P(0)$
    $\langle 3 \rangle 1$. $\forall x \in X . (0, x) \in u \Rightarrow x = a$
      PROOF: If $(0, x) \in u$ and $x \neq a$ then $u - \{(0, x)\} \in \mathcal{C}$ and so $u - \{(0, x)\} \subseteq u$, which is impossible.
  $\langle 2 \rangle 3$. For every natural number $n$, if $P(n)$ then $P(n^+)$.
    $\langle 3 \rangle 1$. LET: $n$ be a natural number.
    $\langle 3 \rangle 2$. ASSUME: $P(n)$
    $\langle 3 \rangle 3$. LET: $x, y \in X$
    $\langle 3 \rangle 4$. ASSUME: $(n^+, x), (n^+, y) \in u$
    $\langle 3 \rangle 5$. PICK $x', y' \in X$ such that $(n, x') \in u$, $(n, y') \in u$ and $f(x') = x$ and $f(y') = y$
      PROOF: If no such $x'$ exists then $u - \{(n^+, x)\} \in \mathcal{C}$ and so $u - \{(n^+, x)\} \subseteq u$ which is impossible. Similarly for $y'$.
    $\langle 3 \rangle 6$. $x' = y'$
      PROOF: $\langle 3 \rangle 2$
    $\langle 3 \rangle 7$. $x = y$
□

**Proposition 6.14.** *For any natural number $n$, either $n = 0$ or there exists a natural number $m$ such that $n = m^+$.*

PROOF: Easy induction on $n$. □

**Proposition 6.15.** *$\omega$ is a transitive set.*

PROOF:
$\langle 1 \rangle 1$. LET: $P(n)$ be the property $\forall x \in n . x \in \omega$
$\langle 1 \rangle 2$. $P(0)$
  PROOF: Vacuous.
$\langle 1 \rangle 3$. For any natural number $n$, if $P(n)$ then $P(n^+)$.
  $\langle 2 \rangle 1$. LET: $n$ be a natural number.
  $\langle 2 \rangle 2$. ASSUME: $P(n)$
  $\langle 2 \rangle 3$. LET: $x \in n^+$
  $\langle 2 \rangle 4$. $x \in n$ or $x = n$
  $\langle 2 \rangle 5$. CASE: $x \in n$

PROOF: Then $x \in \omega$ by $\langle 2 \rangle 2$.

$\langle 2 \rangle 6$. CASE: $x = n$

PROOF: Then $x \in \omega$ by $\langle 2 \rangle 1$.

□

**Proposition 6.16.** *For any natural number $n$ and any nonempty subset $E \subseteq n$, there exists $k \in E$ such that $\forall m \in E.k = m \vee k \in m$.*

PROOF:

$\langle 1 \rangle 1$. LET: $P(n)$ be the property: for any nonempty subset $E \subseteq n$, there exists $k \in E$ such that $\forall m \in E.k = m \vee k \in m$

$\langle 1 \rangle 2$. $P(0)$

PROOF: Vacuous as there is no nonempty subset of 0.

$\langle 1 \rangle 3$. For any natural number $n$, if $P(n)$ then $P(n^+)$.

$\langle 2 \rangle 1$. LET: $n$ be a natural number.

$\langle 2 \rangle 2$. ASSUME: $P(n)$

$\langle 2 \rangle 3$. LET: $E$ be a nonempty subset of $n^+$

$\langle 2 \rangle 4$. CASE: $E - \{n\} = \varnothing$

PROOF: Then $E = \{n\}$ so take $k = n$.

$\langle 2 \rangle 5$. CASE: $E - \{n\} \neq \varnothing$

$\langle 3 \rangle 1$. PICK $k \in E - \{n\}$ such that $\forall m \in E - \{n\}.k = m \vee k \in m$

PROOF: By $\langle 2 \rangle 2$.

$\langle 3 \rangle 2$. $\forall m \in E.k = m \vee k \in m$

PROOF: Since $k \in n$.

# Chapter 7

# Ordinal Numbers

**Definition 7.1** (Ordinal (Number))**.** An *ordinal (number)* is a well ordered set $\alpha$ such that $\forall \xi \in \alpha . s(\xi) = \xi$.

Given ordinals $\alpha$, $\beta$, we write $\alpha < \beta$ iff $\alpha \in \beta$.

**Proposition 7.2.** *Every natural number is an ordinal.*

Proof: Easy. □

**Proposition 7.3.** *$\omega$ is an ordinal.*

Proof: Easy. □

**Proposition 7.4.** *If $\alpha$ is an ordinal number then so is $\alpha^+$.*

Proof: Easy. □

**Proposition 7.5.** *Let $\alpha$ be an ordinal and $\eta, \xi \in \alpha$. Then $\eta < \xi$ if and only if $\eta \in \xi$.*

Proof: Easy. □

**Proposition 7.6.** *Every ordinal is a transitive set.*

Proof: Easy. □

**Proposition 7.7.** *Every element of an ordinal is an ordinal.*

Proof: Easy. □

**Proposition 7.8.** *Similar ordinals are equal.*

Proof:
$\langle 1 \rangle 1$. Let: $\alpha, \beta$ be ordinals.
$\langle 1 \rangle 2$. Let: $f : \alpha \cong \beta$ be a similarity.
Prove: $\forall \xi \in \alpha . f(\xi) = \xi$
$\langle 1 \rangle 3$. Let: $\xi \in \alpha$

⟨1⟩4. ASSUME: as transfinite induction hypothesis $\forall \eta < \xi . f(\eta) = \eta$
⟨1⟩5. $f(\xi) \subseteq \xi$
  ⟨2⟩1. LET: $\eta \in f(\xi)$
  ⟨2⟩2. PICK $\zeta \in \alpha$ such that $f(\zeta) = \eta$
  ⟨2⟩3. $\zeta \in \xi$
    PROOF: Since $f(\zeta) \in f(\xi)$ and $f$ is a similarity.
  ⟨2⟩4. $f(\zeta) = \zeta$
    PROOF: ⟨1⟩4
  ⟨2⟩5. $\eta = \zeta$
    PROOF: ⟨2⟩2, ⟨2⟩4
  ⟨2⟩6. $\eta \in \xi$
    PROOF: ⟨2⟩3, ⟨2⟩5
⟨1⟩6. $\xi \subseteq f(\xi)$
  ⟨2⟩1. LET: $\eta \in \xi$
  ⟨2⟩2. $\eta = f(\eta) \in f(\xi)$
⟨1⟩7. $f(\xi) = \xi$
□

**Proposition 7.9.** *Let $\alpha$ and $\beta$ be ordinals. Then the following are equivalent.*

1. $\alpha \in \beta$
2. $\alpha \subsetneq \beta$
3. *$\beta$ is a continuation of $\alpha$.*

PROOF:
⟨1⟩1. $1 \Rightarrow 3$
  PROOF: If $\alpha \in \beta$ then $\alpha = s(\alpha)$.
⟨1⟩2. $3 \Rightarrow 2$
  PROOF: Immediate from definitions.
⟨1⟩3. $2 \Rightarrow 1$
  ⟨2⟩1. LET: $\gamma$ be the least element of $\beta$ such that $\gamma \notin \alpha$
  ⟨2⟩2. $\alpha \subseteq \gamma$
    ⟨3⟩1. LET: $\eta \in \alpha$
    ⟨3⟩2. $\eta \subseteq \alpha$
    ⟨3⟩3. $\gamma \notin \eta$
    ⟨3⟩4. $\eta \in \gamma$ or $\eta = \gamma$
    ⟨3⟩5. $\eta \neq \gamma$
      PROOF: Since $\eta \in \alpha$ and $\gamma \notin \alpha$.
    ⟨3⟩6. $\eta \in \gamma$
  ⟨2⟩3. $\gamma \subseteq \alpha$
    PROOF: For all $\eta \in \gamma$ we have $\eta \in \alpha$ by leastness of $\gamma$.
  ⟨2⟩4. $\gamma = \alpha$
  ⟨2⟩5. $\alpha \in \beta$
□

**Proposition 7.10.** *For any ordinal numbers $\alpha$ and $\beta$, either $\alpha = \beta$, or $\alpha < \beta$, or $\beta < \alpha$.*

PROOF:
⟨1⟩1. Either $\alpha = \beta$, or $\alpha$ is similar to an initial segment of $\beta$, or $\beta$ is similar to an initial segment of $\alpha$.
⟨1⟩2. CASE: $\alpha$ is similar to an initial segment of $\beta$.
  ⟨2⟩1. PICK $\eta \in \beta$ such that $\alpha \sim s(\eta)$
  ⟨2⟩2. $\alpha \sim \eta$
  ⟨2⟩3. $\alpha = \eta$
    PROOF: Proposition 7.8.
  ⟨2⟩4. $\alpha \in \beta$
⟨1⟩3. CASE: $\beta$ is similar to an initial segment of $\alpha$.
  PROOF: Then $\beta \in \alpha$ similarly.
□

**Proposition 7.11.** *Every set of ordinals is well ordered by $<$.*

PROOF:
⟨1⟩1. LET: $E$ be a set of ordinals.
⟨1⟩2. LET: $A$ be a nonempty subset of $E$.
⟨1⟩3. PICK $\alpha \in A$
⟨1⟩4. CASE: $\alpha \cap A = \varnothing$
  PROOF: Then $\alpha$ is least in $A$.
⟨1⟩5. CASE: $\alpha \cap A \neq \varnothing$
  PROOF: Then $\alpha \cap A$ has a least element, which is least in $A$.
□

**Definition 7.12** (Limit Ordinal)**.** A *limit ordinal* is an ordinal number that is not 0 and not $\alpha^+$ for any ordinal $\alpha$.

**Proposition 7.13.** *For any set $E$ of ordinal numbers, $\bigcup E$ is an ordinal and is the supremum of $E$.*

PROOF: Proposition 5.37. □

**Theorem 7.14** (Burali-Forti Paradox)**.** *There is no set whose members are exactly the ordinal numbers.*

PROOF: For any set of ordinals $E$, we have $(\bigcup E)^+$ is an ordinal that is not in $E$. □

**Theorem 7.15** (Counting Theorem)**.** *Every well ordered set is similar to a unique ordinal.*

PROOF:
⟨1⟩1. LET: $X$ be a well ordered set.
⟨1⟩2. There exists an ordinal $\alpha$ such that $X \cong \alpha$.
  ⟨2⟩1. For all $a \in X$, there exists a unique ordinal $\alpha$ such that $s(a) \cong \alpha$
    ⟨3⟩1. LET: $a \in X$
    ⟨3⟩2. ASSUME: as transfinite induction hypothesis that, for all $b < a$, there exists a unique ordinal $\beta$ such that $s(b) \cong \beta$

⟨3⟩3. LET: $\alpha = \{\beta : \beta \text{ is an ordinal } \wedge \exists b < a.s(b) \cong \beta\}$
PROOF: This is a set by the Axiom of Substitution.
⟨3⟩4. $\alpha$ is an ordinal
⟨4⟩1. LET: $\gamma \in \beta \in \alpha$
⟨4⟩2. PICK $b < a$ and $f : s(b) \cong \beta$
⟨4⟩3. PICK $c < b$ such that $f(c) = \gamma$
⟨4⟩4. $f \restriction s(c) : s(c) \cong \gamma$
⟨3⟩5. $s(a) \cong \alpha$
PROOF: The function $f : s(a) \to \alpha$ defined by $f(b)$ is the ordinal such that $s(b) \cong f(b)$ is a similarity.
⟨3⟩6. $\alpha$ is unique.
PROOF: Proposition 7.8.
⟨2⟩2. LET: $\alpha = \{\beta : \beta \text{ is an ordinal } \wedge \exists a \in X.s(a) \cong \beta\}$
PROOF: This is a set by the Axiom of Substitution.
⟨2⟩3. $\alpha$ is an ordinal.
PROOF: Similar.
⟨2⟩4. $X \cong \alpha$
PROOF: Similar.
⟨1⟩3. For any ordinals $\alpha$ and $\beta$, if $X \cong \alpha$ and $X \cong \beta$ then $\alpha = \beta$.
PROOF: Proposition 7.8.
□

## 7.1 Order on the Natural Numbers

**Proposition 7.16.** *For natural numbers $m$, $n$ and $k$, if $m < n$ then $m + k < n + k$.*

PROOF:
⟨1⟩1. LET: $m, n \in \omega$
⟨1⟩2. ASSUME: $m < n$
⟨1⟩3. $m + 0 < n + 0$
⟨1⟩4. $\forall k \in \omega.m + k < n + k \Rightarrow m + k^+ < n + k^+$
PROOF: By Proposition 6.7.
□

**Proposition 7.17.** *For natural numbers $m$, $n$ and $k$, if $m < n$ and $k \neq 0$ then $mk < nk$.*

PROOF:
⟨1⟩1. LET: $m, n \in \omega$
⟨1⟩2. ASSUME: $m < n$
⟨1⟩3. $m1 < n1$
⟨1⟩4. For all $k \in \omega$, if $k \neq 0$ and $mk < nk$ then $m(k + 1) < n(k + 1)$

PROOF:

$$\begin{aligned} m(k+1) &= mk + m \\ &< mk + n && \text{(Proposition 7.16)} \\ &< nk + n && \text{(Proposition 7.16)} \\ &= n(k+1) \end{aligned}$$

□

**Proposition 7.18.** *Let $n$ be a natural number. Let $X$ be a proper subset of $n$. Then there exists $m < n$ such that $X \sim m$.*

PROOF:
⟨1⟩1. LET: $P(n)$ be the property: for every proper subset $X \subsetneq n$, there exists $m < n$ such that $X \sim m$.
⟨1⟩2. $P(0)$
  PROOF: Vacuous.
⟨1⟩3. $\forall n \in \omega . P(n) \Rightarrow P(n+1)$
  ⟨2⟩1. LET: $n \in \omega$
  ⟨2⟩2. ASSUME: $P(n)$
  ⟨2⟩3. LET: $X$ be a proper subset of $n+1$
  ⟨2⟩4. CASE: $X - \{n\} = n$
    PROOF: Then $X = n$ so $X \sim n < n+1$.
  ⟨2⟩5. CASE: $X - \{n\} \subsetneq n$
    ⟨3⟩1. PICK $m < n$ such that $X - \{n\} \sim m$
    ⟨3⟩2. $X \sim m$ or $X \sim m+1$
      PROOF: If $n \in X$ then $X \sim m+1$. If $n \notin X$ then $X \sim m$.

□

**Proposition 7.19.** *For every natural number $n$, we have $n$ is not equivalent to a proper subset of $n$.*

PROOF:
⟨1⟩1. LET: $P(n)$ be the property: every one-to-one function $n \to n$ is onto.
⟨1⟩2. $P(0)$
  PROOF: The only function $0 \to 0$ is $\varnothing$.
⟨1⟩3. $\forall n \in \omega . P(n) \Rightarrow P(n+1)$
  ⟨2⟩1. LET: $n \in \omega$
  ⟨2⟩2. ASSUME: $P(n)$
  ⟨2⟩3. ASSUME: $f : n+1 \to n+1$ is one-to-one.
  ⟨2⟩4. LET: $g : n \to n$ be the function

$$g(k) = \begin{cases} f(k) & \text{if } f(k) < n \\ f(n) & \text{if } f(k) = n \end{cases}$$

    PROOF: If $k < n$ and $f(k) = n$ then $f(n) < n$ since $f$ is one-to-one.
  ⟨2⟩5. $g$ is one-to-one.
    ⟨3⟩1. LET: $k, l < n$
    ⟨3⟩2. ASSUME: $g(k) = g(l)$
    ⟨3⟩3. CASE: $f(k) < n$ and $f(l) < n$

PROOF: Then $f(k) = g(k) = g(l) = f(l)$ so $k = l$ since $f$ is one-to-one.

$\langle 3 \rangle 4$. CASE: $f(k) < n$ and $f(l) = n$

PROOF: Then $f(k) = g(k) = g(l) = f(n)$ contradicting the fact that $f$ is one-to-one.

$\langle 3 \rangle 5$. CASE: $f(k) = n$ and $f(l) < n$

PROOF: Similar.

$\langle 3 \rangle 6$. CASE: $f(k) = n$ and $f(l) = n$

PROOF: Then $k = l$ since $f$ is one-to-one.

$\langle 2 \rangle 6$. $g$ maps $n$ onto $n$.

PROOF: $\langle 2 \rangle 2$

$\langle 2 \rangle 7$. $f$ maps $n + 1$ onto $n + 1$.

$\langle 3 \rangle 1$. LET: $l < n + 1$

$\langle 3 \rangle 2$. CASE: $l < n$

$\langle 4 \rangle 1$. PICK $k < n$ such that $g(k) = l$

$\langle 4 \rangle 2$. $f(k) = l$ or $f(n) = l$

$\langle 3 \rangle 3$. CASE: $l = n$

$\langle 4 \rangle 1$. CASE: $f(n) = n$

PROOF: Then $l \in \operatorname{ran} f$ as required.

$\langle 4 \rangle 2$. CASE: $f(n) < n$

$\langle 5 \rangle 1$. PICK $k < n$ such that $g(k) = f(n)$

$\langle 5 \rangle 2$. $f(k) = n$

□

**Corollary 7.19.1.** *Equivalent natural numbers are equal.*

**Proposition 7.20.** *The lexicographical order is a well ordering on $\omega \times \omega$.*

PROOF: Easy. □

## 7.2 Finite Sets

**Definition 7.21** (Finite)**.** A set is *finite* iff it is equivalent to a natural number; otherwise, it is *infinite*.

**Proposition 7.22.** *No finite set is equivalent to one of its proper subsets.*

PROOF: From Proposition 7.19. □

**Proposition 7.23.** *$\omega$ is infinite.*

PROOF: Since the function that maps $n$ to $n + 1$ is a one-to-one correspondence between $\omega$ and $\omega - \{0\}$. □

**Proposition 7.24.** *Every subset of a finite set is finite.*

PROOF: Proposition 7.18. □

**Definition 7.25** (Number of Elements)**.** For any finite set $E$, the *number of elements* in $E$, $\sharp(E)$, is the unique natural number such that $E \sim \sharp(E)$.

**Proposition 7.26.** *Let $E$ and $F$ be finite sets. If $E \subseteq F$ then $\sharp(E) \leqslant \sharp(F)$.*

PROOF: Proposition 7.18. □

**Proposition 7.27.** *Let $E$ and $F$ be disjoint finite sets. Then $E \cup F$ is finite and $\sharp(E \cup F) = \sharp(E) \cup \sharp(F)$.*

PROOF:
⟨1⟩1. LET: $P(n)$ be the statement: $n \in \omega$ and for any $m \in \omega$, if $E \sim m$, $F \sim n$ and $E \cap F = \varnothing$, then $E \cup F \sim m + n$
⟨1⟩2. $P(0)$
  ⟨2⟩1. LET: $m \in \omega$
  ⟨2⟩2. LET: $E \sim m$ and $F \sim 0$
  ⟨2⟩3. $F = \varnothing$
  ⟨2⟩4. $E \cup F = E \sim m = m + 0$
⟨1⟩3. $\forall n \in \omega . P(n) \Rightarrow P(n + 1)$
  ⟨2⟩1. LET: $n \in \omega$
  ⟨2⟩2. ASSUME: $P(n)$
  ⟨2⟩3. LET: $m \in \omega$
  ⟨2⟩4. LET: $E \sim m$ and $F \sim n + 1$
  ⟨2⟩5. ASSUME: $E \cap F = \varnothing$
  ⟨2⟩6. PICK $f \in F$
  ⟨2⟩7. $F - \{f\} \sim n$
  ⟨2⟩8. $E \cap (F - \{f\}) = \varnothing$
  ⟨2⟩9. $E \cup (F - \{f\}) \sim m + n$
    PROOF: ⟨2⟩2
  ⟨2⟩10. $E \cup F \sim m + n + 1$
□

**Corollary 7.27.1.** *The union of two finite sets is finite.*

PROOF: Since, if $E$ and $F$ are finite, then $E \cup F = (E - F) \cup (E \cap F) \cup (F - E)$ and these are finite and disjoint. □

**Proposition 7.28.** *If $E$ and $F$ are finite sets then $E \times F$ is finite and $\sharp(E \times F) = \sharp(E)\sharp(F)$.*

PROOF:
⟨1⟩1. LET: $P(n)$ be the statement: $n \in \omega$ and for all $m \in \omega$, if $E \sim m$ and $F \sim n$ then $E \times F \sim mn$
⟨1⟩2. $P(0)$
  PROOF: If $F \sim 0$ then $F = \varnothing$ so $E \times F = \varnothing \sim 0$.
⟨1⟩3. $\forall n \in \omega . P(n) \Rightarrow P(n + 1)$
  ⟨2⟩1. LET: $n \in \omega$
  ⟨2⟩2. ASSUME: $P(n)$
  ⟨2⟩3. LET: $m \in \omega$
  ⟨2⟩4. ASSUME: $E \sim m$ and $F \sim n + 1$
  ⟨2⟩5. PICK $f \in F$

⟨2⟩6. $F - \{f\} \sim n$
⟨2⟩7. $E \times (F - \{f\}) \sim mn$
⟨2⟩8. $E \times F = (E \times (F - \{f\})) \cup (E \times \{f\})$
⟨2⟩9. $E \times \{f\} \sim m$
⟨2⟩10. $E \times F \sim mn + m$
PROOF: Proposition 7.27.
□

**Proposition 7.29.** *For any finite sets $E$ and $F$, we have $E^F$ is finite and $\sharp(E^F) = \sharp(E)^{\sharp(F)}$.*

PROOF:
⟨1⟩1. LET: $P(n)$ be the property: $n \in \omega$ and for all $m \in \omega$, if $E \sim m$ and $F \sim n$ then $E^F \sim m^n$
⟨1⟩2. $P(0)$
PROOF: Since $E^{\varnothing} = \{\varnothing\} \sim 1$
⟨1⟩3. $\forall n \in \omega . P(n) \Rightarrow P(n+1)$
⟨2⟩1. LET: $n \in \omega$
⟨2⟩2. ASSUME: $P(n)$
⟨2⟩3. LET: $m \in \omega$
⟨2⟩4. LET: $E \sim m$ and $F \sim n + 1$
⟨2⟩5. PICK $f \in F$
⟨2⟩6. $F - \{f\} \sim n$
⟨2⟩7. LET: $\phi : E^F \to E^{F-\{f\}} \times E$ be the function $\phi(g) = (g \restriction (F - \{f\}), g(f))$
⟨2⟩8. $\phi$ is a one-to-one correspondence
⟨2⟩9. $\sharp(E^F) = m^{n+1}$
PROOF:

$$\begin{aligned} \sharp(E^F) &= \sharp(E^{F-\{f\}} \times E) \\ &= \sharp(E^{F-\{f\}})\sharp(E) && \text{(Proposition 7.28)} \\ &= m^n m && (\langle 2\rangle 2, \langle 2\rangle 4) \\ &= m^{n+1} \end{aligned}$$

□

**Corollary 7.29.1.** *If $E$ is finite then $\mathcal{P}E$ is finite and $\sharp(\mathcal{P}E) = 2^{\sharp(E)}$.*

**Proposition 7.30.** *The union of a finite set of finite sets is finite.*

PROOF:
⟨1⟩1. LET: $P(n)$ be the property: for any set $E$, if $E \sim n$ and every element of $E$ is finite, then $\bigcup E$ is finite.
⟨1⟩2. $P(0)$
PROOF: Since $\bigcup \varnothing = \varnothing$ is finite.
⟨1⟩3. $\forall n \in \omega . P(n) \Rightarrow P(n+1)$
⟨2⟩1. LET: $n$ be a natural number.
⟨2⟩2. ASSUME: $P(n)$
⟨2⟩3. LET: $E \sim n + 1$

⟨2⟩4. PICK $X \in E$
⟨2⟩5. $E - \{X\} \sim n$
⟨2⟩6. $\bigcup(E - \{X\})$ is finite.
PROOF: ⟨2⟩2
⟨2⟩7. $\bigcup E = \bigcup(E - \{X\}) \cup X$
⟨2⟩8. $\bigcup E$ is finite.
PROOF: Corollary 7.27.1.
□

**Proposition 7.31.** *Every nonempty finite set of natural numbers has a greatest element.*

PROOF:
⟨1⟩1. LET: $P(n)$ be the property: for every $E \subseteq \mathbb{N}$, if $E \sim n$ then $E$ has a greatest element.
⟨1⟩2. $P(1)$
PROOF: Since $k$ is the greatest element of $\{k\}$.
⟨1⟩3. $\forall n \geqslant 1.P(n) \Rightarrow P(n+1)$
⟨2⟩1. LET: $n \geqslant 1$
⟨2⟩2. ASSUME: $P(n)$
⟨2⟩3. ASSUME: $E \subseteq \omega$ and $E \sim n+1$
⟨2⟩4. PICK $k \in E$
⟨2⟩5. LET: $l$ be the greatest element of $E - \{k\}$
⟨2⟩6. Either $k$ or $l$ is greatest in $E$.
□

**Proposition 7.32.** *Every infinite set has a subset equivalent to $\omega$.*

PROOF:
⟨1⟩1. LET: $X$ be an infinite set.
⟨1⟩2. PICK a choice function $f$ for $X$.
⟨1⟩3. LET: $\mathcal{C}$ be the set of all finite subsets of $X$.
⟨1⟩4. For all $A \in \mathcal{C}$ we have $X - A \in \operatorname{dom} f$.
PROOF: For all $A \in \mathcal{C}$ we have $X - A \neq \varnothing$.
⟨1⟩5. LET: $U : \omega \to \mathcal{C}$ be the function defined recursively by $U(0) = \varnothing$ and $U(n+1) = U(n) \cup \{f(X - U(n))\}$ for all $n \in \omega$.
⟨1⟩6. LET: $v : \omega \to X$ be the function $v(n) = f(X - U(n))$
PROVE: $v$ is one-to-one.
⟨1⟩7. $\forall n \in \omega.v(n) \notin U(n)$
PROOF: Since $v(n) = f(X - U(n)) \in X - U(n)$.
⟨1⟩8. $\forall n \in \omega.v(n) \in U(n+1)$
⟨1⟩9. $\forall m, n \in \omega.n \leqslant m \Rightarrow U(n) \subseteq U(m)$
PROOF: Since $U(n) \subseteq U(n+1)$ for all $n$.
⟨1⟩10. $\forall m, n \in \omega.n < m \Rightarrow v(n) \neq v(m)$
PROOF: Since $v(n) \in U(m)$ and $v(m) \notin U(m)$.
□

**Corollary 7.32.1.** *A set is infinite if and only if it is equivalent to a proper subset.*

## 7.3 Ordinal Arithmetic

**Definition 7.33** (Addition)**.** Let $I$ be a well ordered set and $(\alpha_i)_{i\in I}$ be a sequence of ordinals. Choose a well ordered set $A_i$ such that $A_i \cong \alpha_i$ for each $i \in I$, and assume the sets $A_i$ are pairwise disjoint. The *sum* $\sum_{i\in I} \alpha_i$ is the ordinal of the well ordered set $\bigcup_{i\in I} A_i$, where:

- for $x, y \in A_i$, we have $x <_{\bigcup_{i\in I} A_i} y$ if and only if $x <_{A_i} y$
- for $x \in A_i$ and $y \in A_j$ with $i \neq j$, we have $x <_{\bigcup_{i\in I} A_i} y$ iff $i <_I j$

We write $\alpha + \beta$ for $\sum_{i\in 2} \gamma_i$ where $\gamma_0 = \alpha$ and $\gamma_1 = \beta$.

**Proposition 7.34.**

$$\begin{aligned} \alpha + 0 &= \alpha \\ 0 + \alpha &= \alpha \\ \alpha + 1 &= \alpha^+ \\ \alpha + (\beta + \gamma) &= (\alpha + \beta) + \gamma \end{aligned}$$

Proof: Easy. □

**Proposition 7.35.** *For any ordinals $\alpha$ and $\beta$, we have $\alpha < \beta$ if and only if there exists $\gamma \neq 0$ such that $\beta = \alpha + \gamma$.*

Proof: Easy. □

**Proposition 7.36.**

$$1 + \omega = \omega$$

Proof: Easy. □

**Definition 7.37** (Multiplication)**.** Given ordinals $\alpha$ and $\beta$, the *product* $\alpha\beta$ is the ordinal of $\alpha \times \beta$ under the *reverse lexicographic order*: $(a, b) < (c, d)$ iff $b < d$ or ($b = d$ and $a < c$).

**Proposition 7.38.**

$$\begin{aligned} \alpha 0 &= 0 \\ 0\alpha &= 0 \\ \alpha 1 &= \alpha \\ 1\alpha &= \alpha \\ \alpha(\beta\gamma) &= (\alpha\beta)\gamma \\ \alpha(\beta + \gamma) &= \alpha\beta + \alpha\gamma \end{aligned}$$

Proof: Easy. □

**Proposition 7.39.** *For ordinals $\alpha$ and $\beta$, if $\alpha\beta = 0$ then $\alpha = 0$ or $\beta = 0$.*

PROOF: Easy. □

**Example 7.40.** The commutative law fails:

$$2\omega = \omega \neq \omega 2$$

PROOF: Easy. □

**Example 7.41.** The right distributive law fails:

$$(1+1)\omega = \omega \neq 1\omega + 1\omega = \omega 2$$

**Definition 7.42** (Exponentiation)**.** Given ordinals $\alpha$ and $\beta$, define the ordinal $\alpha^\beta$ by

$$\begin{aligned} \alpha^0 &= 1 \\ \alpha^{\beta+1} &= \alpha^\beta \alpha \\ \alpha^\lambda &= \bigcup_{\beta<\lambda} \alpha^\beta && (\lambda \text{ a limit ordinal}) \end{aligned}$$

**Proposition 7.43.**

$$\begin{aligned} 0^\alpha &= 0 && (\alpha \geqslant 1) \\ 1^\gamma &= 1 \\ \alpha^{\beta+\gamma} &= \alpha^\beta \alpha^\gamma \\ \alpha^{\beta\gamma} &= (\alpha^\beta)^\gamma \end{aligned}$$

PROOF: Easy. □

**Example 7.44.** $(\alpha\beta)^\gamma$ is different from $\alpha^\gamma \beta^\gamma$ in general:

$$(2 \cdot 2)^\omega = \omega \neq 2^\omega 2^\omega = \omega^2 \ .$$

## 7.4 Arithmetic on the Natural Numbers

**Proposition 7.45.** *For all $m, n \in \omega$, we have*

$$m + n = n + m \ .$$

PROOF:
⟨1⟩1. LET: $P(m)$ be the property $\forall n \in \omega . m + n = n + m$
⟨1⟩2. $P(0)$
  ⟨2⟩1. LET: $Q(n)$ be the property $0 + n = n + 0$
  ⟨2⟩2. $Q(0)$
    PROOF: Trivial.
  ⟨2⟩3. $\forall n \in \omega . Q(n) \Rightarrow Q(n^+)$
    ⟨3⟩1. LET: $n \in \omega$

⟨3⟩2. ASSUME: $Q(n)$
⟨3⟩3. $0 + n^+ = n^+ + 0$
PROOF:

$$\begin{aligned} 0 + n^+ &= (0 + n)^+ \\ &= (n + 0)^+ && (\langle 3 \rangle 2) \\ &= n^+ \\ &= n^+ + 0 \end{aligned}$$

⟨1⟩3. $\forall m \in \omega . P(m) \Rightarrow P(m^+)$
⟨2⟩1. LET: $m \in \omega$
⟨2⟩2. ASSUME: $P(m)$
⟨2⟩3. LET: $Q(n)$ be the property $m^+ + n = n + m^+$
⟨2⟩4. $Q(0)$
PROOF: ⟨1⟩2
⟨2⟩5. $\forall n \in \omega . Q(n) \Rightarrow Q(n^+)$
⟨3⟩1. LET: $n \in \omega$
⟨3⟩2. ASSUME: $Q(n)$
⟨3⟩3. $Q(n^+)$
PROOF:

$$\begin{aligned} m^+ + n^+ &= (m^+ + n)^+ \\ &= (n + m^+)^+ && (\langle 3 \rangle 2) \\ &= (n + m)^{++} \\ &= (m + n)^{++} && (\langle 2 \rangle 2) \\ &= (m + n^+)^+ \\ &= (n^+ + m)^+ && (\langle 2 \rangle 2) \\ &= n^+ + m^+ \end{aligned}$$

□

**Proposition 7.46.** *For all $m, n \in \omega$, we have*

$$mn = nm \ .$$

PROOF:
⟨1⟩1. LET: $P(m)$ be the statement $\forall n \in \omega . mn = nm$
⟨1⟩2. $P(0)$
⟨2⟩1. LET: $Q(n)$ be the statement $0n = n0$
⟨2⟩2. $Q(0)$
PROOF: Trivial.
⟨2⟩3. $\forall n \in \omega . Q(n) \Rightarrow Q(n^+)$
⟨3⟩1. LET: $n \in \omega$
⟨3⟩2. ASSUME: $Q(n)$
⟨3⟩3. $Q(n^+)$

PROOF:

$$\begin{aligned} 0n^+ &= 0n + 0 \\ &= 0n \\ &= n0 && (\langle 3\rangle 2) \\ &= 0 \\ &= n^+0 \end{aligned}$$

$\langle 1\rangle 3.\ \forall m \in \omega . P(m) \Rightarrow P(m^+)$
  $\langle 2\rangle 1.$ LET: $m \in \omega$
  $\langle 2\rangle 2.$ ASSUME: $P(m)$
  $\langle 2\rangle 3.$ LET: $Q(n)$ be the statement $m^+n = nm^+$
  $\langle 2\rangle 4.\ Q(0)$
    PROOF: $\langle 1\rangle 2$
  $\langle 2\rangle 5.\ \forall n \in \omega . Q(n) \Rightarrow Q(n^+)$
    $\langle 3\rangle 1.$ LET: $n \in \omega$
    $\langle 3\rangle 2.$ ASSUME: $Q(n)$
    $\langle 3\rangle 3.\ Q(n^+)$
      PROOF:

$$\begin{aligned} m^+n^+ &= m^+n + m^+ \\ &= (m^+n + m)^+ \\ &= (nm^+ + m)^+ && (\langle 3\rangle 2) \\ &= (nm + n + m)^+ \\ &= (mn + m + n)^+ && (\langle 2\rangle 2, \text{ Proposition 7.45}) \\ &= (mn^+ + n)^+ \\ &= (n^+m + n)^+ && (\langle 2\rangle 2) \\ &= n^+m + n^+ \\ &= n^+m^+ \end{aligned}$$

□

# Chapter 8

# Countable Sets

**Definition 8.1** (Countable)**.** A set $A$ is *countable* or *denumerable* iff there exists an injective function $A \to \omega$.

**Definition 8.2** (Countably Infinite)**.** A set is *countably infinite* iff it is similar to $\omega$.

**Proposition 8.3.** *Every subset of a countable set is countable.*

PROOF: Easy. □

**Proposition 8.4.** *Let $X$ be a set. If there exists a function from $\omega$ onto $X$, then $X$ is countable.*

PROOF:
⟨1⟩1. LET: $f$ be a function from $\omega$ onto $X$.
⟨1⟩2. Choose a function $g : X \to \omega$ such that, for all $x \in X$, we have $f(g(x)) = x$.
⟨1⟩3. $g$ is one-to-one.
□

**Proposition 8.5.** *$\omega \times \omega$ is countable.*

PROOF: The sequence

$$(0,0), (0,1), (1,0), (0,2), (1,1), (2,0), \ldots$$

is an enumeration of $\omega \times \omega$. □

**Corollary 8.5.1.** *A countable union of countable sets is countable.*

PROOF:
⟨1⟩1. LET: $A$ be a countable set of countable sets.
⟨1⟩2. PICK a surjection $f : \omega \to A$
⟨1⟩3. For $n \in \omega$, PICK a surjection $g_n : \omega \to f(n)$
⟨1⟩4. PICK a surjection $h : \omega \to \omega \times \omega$
⟨1⟩5. $\lambda n \in \omega . g_{\pi_1(h(n))}(\pi_2(h(n)))$ is a surjection $\omega \to \bigcup A$
□

**Corollary 8.5.2.** *The Cartesian product of two countable sets is countable.*

**Corollary 8.5.3.** *For any countable set $A$, the set of all finite subsets of $A$ is countable.*

PROOF: Prove by induction on $n$ that the set of all subsets of size $n$ is countable. The set of all finite subsets is then the union of these. □

**Proposition 8.6.** *$\mathcal{P}\omega$ is uncountable.*

PROOF: Cantor's Theorem. □

# Chapter 9

# Cardinal Numbers

**Definition 9.1** (Cardinal Number)**.** A *cardinal number* or *initial ordinal* is an ordinal $\alpha$ such that, for all $\beta < \alpha$, we have $\beta \not\sim \alpha$.

**Definition 9.2** (Cardinality)**.** For any set $X$, the *cardinality* of $X$, $\operatorname{card} X$, is the least ordinal that is equivalent to $X$.

**Proposition 9.3.** *Given sets $X$ and $Y$, we have $X \sim Y$ if and only if* $\operatorname{card} X = \operatorname{card} Y$.

Proof: Easy. □

**Proposition 9.4.** *For sets $X$ and $Y$, we have* $\operatorname{card} X \leqslant \operatorname{card} Y$ *if and only if there exists an injective function $X \to Y$.*

Proof: Easy. □

**Proposition 9.5.** *Every natural number is a cardinal. $\omega$ is a cardinal.*

Proof: Easy. □

**Proposition 9.6.** *Every inifinite cardinal is a limit ordinal.*

Proof: For $\alpha$ infinite we have $f : \alpha^+ \sim \alpha$ where $f(\alpha) = 0$ and $f(\beta) = \beta^+$ for all other $\beta$. □

## 9.1 Cardinal Arithmetic

**Definition 9.7** (Addition)**.** Given a family of cardinal numbers $\{\kappa_i\}_{i\in I}$, let $\sum_{i\in I} \kappa_i$ be $\operatorname{card} \bigcup_{i\in I} A_i$, where $\{A_i\}_{i\in I}$ is a pairwise disjoint family of sets with $\operatorname{card} A_i = \kappa_i$ for all $i$.

We write $\kappa + \lambda$ for $\sum_{i\in 2} \kappa_i$ where $\kappa_0 = \kappa$ and $\kappa_1 = \lambda$.

**Proposition 9.8.**

$$\kappa + \lambda = \lambda + \kappa$$
$$\kappa + (\lambda + \mu) = (\kappa + \lambda) + \mu$$

PROOF: Easy. □

**Proposition 9.9.** *Cardinal addition agrees with ordinal addition on the natural numbers.*

PROOF: Easy induction. □

**Proposition 9.10.** *If $\kappa \leqslant \kappa'$ then $\kappa + \lambda \leqslant \kappa' + \lambda$.*

PROOF: Easy. □

**Proposition 9.11.** *If $\kappa$ is an infinite cardinal number then $\kappa + \kappa = \kappa$.*

PROOF:
⟨1⟩1. LET: $A$ be an infinite set.
PROVE: $A \times 2 \sim A$
⟨1⟩2. LET: $\mathcal{F}$ be the set of all functions $f$ such that there exists $X \subseteq A$ such that $f : X \times 2 \sim X$.
⟨1⟩3. $\mathcal{F}$ is non-empty.
PROOF: Pick a subset $X \subseteq A$ such that $X \sim \omega$, and a bijection $X \times 2 \sim X$.
⟨1⟩4. $\mathcal{F}$ is partially ordered by extension.
⟨1⟩5. Every chain in $\mathcal{F}$ has an upper bound.
PROOF: If $\mathcal{C} \subseteq \mathcal{F}$ is a chain then $\bigcup \mathcal{C} \in \mathcal{F}$.
⟨1⟩6. PICK $f \in \mathcal{F}$ maximal.
⟨1⟩7. PICK $X \subseteq A$ such that $f : X \times 2 \sim X$
⟨1⟩8. $X - A$ is finite.
⟨2⟩1. ASSUME: for a contradiction $X - A$ is infinite.
⟨2⟩2. PICK $Y \subseteq X - A$ such that $Y \sim \omega$.
⟨2⟩3. PICK $g : Y \times 2 \sim Y$
⟨2⟩4. $f \cup g : (X \cup Y) \times 2 \sim X \cup Y$
⟨2⟩5. Q.E.D.
PROOF: This contradicts the maximality of $f$.
⟨1⟩9. $\operatorname{card} A + \operatorname{card} A = \operatorname{card} A$
PROOF:

$$\begin{aligned}
2 \operatorname{card} A &= 2(\operatorname{card} X + \operatorname{card}(A - X)) \\
&= 2 \operatorname{card} X + 2 \operatorname{card}(A - X) \\
&= \operatorname{card} X + 2 \operatorname{card}(A - X) && (\langle 1 \rangle 7) \\
&= \operatorname{card} X && (\langle 1 \rangle 8) \\
&= \operatorname{card} X + \operatorname{card}(A - X) && (\langle 1 \rangle 8) \\
&= \operatorname{card} A
\end{aligned}$$

□

**Corollary 9.11.1.** *For any cardinals $\kappa$ and $\lambda$ that are not both finite, we have*

$$\kappa + \lambda = \max(\kappa, \lambda) \ .$$

**Definition 9.12** (Multiplication)**.** Given a family of cardinal numbers $\{\kappa_i\}_{i \in I}$, let $\prod_{i \in I} \kappa_i = \operatorname{card} \times_{i \in I} \kappa_i$.
We write $\kappa\lambda$ for $\prod_{i \in 2} \kappa_i$ where $\kappa_0 = \kappa$ and $\kappa_1 = \lambda$.

**Proposition 9.13.**

$$\kappa\lambda = \lambda\kappa$$
$$\kappa(\lambda\mu) = (\kappa\lambda)\mu$$
$$\kappa(\lambda + \mu) = \kappa\lambda + \kappa\mu$$

**Proposition 9.14.** *Cardinal multiplication agrees with ordinal multiplication on the natural numbers.*

PROOF: Easy induction. □

**Proposition 9.15.** *If $\kappa \leqslant \kappa'$ then $\kappa\lambda \leqslant \kappa'\lambda$.*

PROOF: Easy. □

**Proposition 9.16.** *Let $\{\kappa_i\}_{i\in I}$ and $\{\lambda_i\}_{i\in I}$ be families of cardinal numbers with the same index set. If $\kappa_i < \lambda_i$ for all $i$, then $\sum_{i\in I} \kappa_i < \prod_{i\in I} \lambda_i$.*

PROOF:
⟨1⟩1. Choose a one-to-one function $f_i : \kappa_i \to \lambda_i$ for each $i \in I$
⟨1⟩2. $\sum_{i\in I} \kappa_i \leqslant \prod_{i\in I} \lambda_i$
  PROOF: Define $g : \sum_{i\in I} \kappa_i \to \prod_{i\in I} \lambda_i$ by
$$g(i,\eta)(j) = \begin{cases} f_i(\eta) & \text{if } i = j \\ 0 & \text{if } i \neq j \end{cases}$$
⟨1⟩3. There is no surjective function $\sum_{i\in I} \kappa_i < \prod_{i\in I} \lambda_i$
  ⟨2⟩1. LET: $h : \sum_i \kappa_i \to \prod_i \lambda_i$
  ⟨2⟩2. Choose $t(i) < \lambda_i$ for each $i \in I$ such that, for all $\eta < \kappa_i$, we have $t(i) \neq h(i,\eta)(i)$.
    PROOF: Since the function that maps $\eta$ to $h(i,\eta)(i)$ cannot be surjective $\kappa_i \to \lambda_i$.
  ⟨2⟩3. For all $i \in I$ and $\eta < \kappa_i$ we have $h \neq t(i,\eta)$.
□

**Proposition 9.17.** *If $\kappa$ is an infinite cardinal then $\kappa\kappa = \kappa$.*

PROOF:
⟨1⟩1. LET: $A$ be an infinite set.
⟨1⟩2. LET: $\mathcal{F}$ be the set of all functions $f$ such that there exists $X \subseteq A$ such that $f : X \times X \sim X$
⟨1⟩3. $\mathcal{F}$ is nonempty.
  PROOF: Pick a countably infinite $X \subseteq A$. Then $X \times X \sim X$.
⟨1⟩4. $\mathcal{F}$ is partially ordered by extension.
⟨1⟩5. Every chain in $\mathcal{F}$ has an upper bound.
⟨1⟩6. PICK $f \in \mathcal{F}$ maximal.
⟨1⟩7. PICK $X \subseteq A$ such that $f : X \times X \sim X$.
⟨1⟩8. $\operatorname{card} X = \operatorname{card} A$
  ⟨2⟩1. ASSUME: for a contradiction $\operatorname{card} X < \operatorname{card} A$
  ⟨2⟩2. $\operatorname{card} A = \operatorname{card}(A - X)$

PROOF: Corollary 9.11.1.

⟨2⟩3. $\operatorname{card} X < \operatorname{card}(A - X)$

⟨2⟩4. PICK $Y \subseteq A - X$ such that $Y \sim X$

⟨2⟩5. PICK $g : (X \times Y) \cup (Y \times X) \cup (Y \times Y) \sim Y$

PROOF:

$$\begin{aligned}(X \times Y) \cup (Y \times X) \cup (Y \times Y) &\sim 3 \times X \times X && (\langle 2\rangle 4)\\ &\sim 3 \times X && (\langle 1\rangle 7)\\ &\sim X && \text{(Corollary 9.11.1)}\\ &\sim Y && (\langle 2\rangle 4)\end{aligned}$$

⟨2⟩6. $f \cup g : (X \cup Y) \times (X \cup Y) \sim X \cup Y$

⟨2⟩7. Q.E.D.

PROOF: This contradicts the maximality of $f$.

□

**Corollary 9.17.1.** *If $\kappa$ and $\lambda$ are non-zero cardinals that are not both finite, then*

$$\kappa\lambda = \max(\kappa, \lambda) \ .$$

**Definition 9.18** (Exponentiation)**.** Given cardinal numbers $\kappa$ and $\lambda$, let $\kappa^\lambda$ be the cardinality of the set of all functions $\lambda \to \kappa$.

**Proposition 9.19.**

$$\begin{aligned}\kappa^{\lambda+\mu} &= \kappa^\lambda \kappa^\mu\\ (\kappa\lambda)^\mu &= \kappa^\mu \lambda^\mu\\ \kappa^{\lambda\mu} &= (\kappa^\lambda)^\mu\end{aligned}$$

PROOF: Easy. □

**Proposition 9.20.** *Cardinal exponentiation and ordinal exponentiation agree on the natural numbers.*

PROOF: Easy. □

**Proposition 9.21.**

$$\operatorname{card} \mathcal{P}X = 2^{\operatorname{card} X}$$

PROOF: Define $\chi : \mathcal{P}X \sim 2^X$ to be the function that maps $S$ to the function $\chi_S : X \to 2$ where $\chi_S(x) = 1$ if $x \in S$ and $\chi_S(x) = 0$ if $x \notin S$. □

**Proposition 9.22.** *For any infinite cardinal $\kappa$ we have $\kappa < 2^\kappa$.*

PROOF: Proposition 9.16. □

**Proposition 9.23.** *If $\kappa \leqslant \lambda$ then $\kappa^\mu \leqslant \lambda^\mu$.*

PROOF: Easy. □

## 9.2 Alephs

**Definition 9.24** (Aleph)**.** Define the cardinal $\aleph_\alpha$ for every ordinal $\alpha$ as follows: $\aleph_\alpha$ is the least infinite cardinal greater than $\aleph_\beta$ for all $\beta < \alpha$.

**Proposition 9.25.**

$$\aleph_0 = \omega$$

Proof: Easy. □

**Definition 9.26** (Continuum Hypothesis)**.** The *continuum hypothesis* is the statement $\aleph_1 = 2^{\aleph_0}$.

**Definition 9.27** (Generalized Continuum Hypothesis)**.** The *generalized continuum hypothesis* is the statement: for every ordinal $\alpha$ we have $\aleph_{\alpha+1} = 2^{\aleph_\alpha}$.

# Chapter 10

# Field Theory

**Definition 10.1** (Field)**.** A *field* is a triple $(K, +, \cdot)$ such that $K$ is a set, $+$ and $\cdot$ are functions $K^2 \to K$, and:

1. $\forall x, y, z \in K . x + (y + z) = (x + y) + z$
2. $\forall x, y, z \in K . x(yz) = (xy)z$
3. $\forall x, y \in K . x + y = y + x$
4. $\forall x, y \in K . xy = yx$
5. There exists a unique $0 \in K$ such that $\forall x \in K . x + 0 = x$
6. There exists a unique $1 \in K$ such that $\forall x \in K . x1 = x$
7. $0 \neq 1$
8. $\forall x \in K . \exists! (-x) \in K . x + (-x) = 0$
9. For all $x \in K$, if $x \neq 0$ then $\exists! (1/x) \in K . x \cdot 1/x = 1$
10. $\forall x, y, z \in K . x(y + z) = xy + xz$

We call $-x$ the *negation* of $x$.

**Definition 10.2** (Subtraction)**.** In any field $K$, define *subtraction* $- : K^2 \to K$ by $x - y = x + (-y)$.

**Definition 10.3** (Ordered Field)**.** An *ordered field* is a quadruple $(K, +, \cdot, \leqslant)$ such that $(K, +, \cdot)$ is a field and $\leqslant$ is a linear order on $K$, and:

1. For all $x, y, z \in K$, if $x < y$ then $x + z < y + z$
2. For all $x, y, z \in K$, if $x < y$ and $0 < z$ then $xz < yz$

# Chapter 11

# Real Numbers

## 11.1 Axioms for Real Numbers

Let there be a set $\mathbb{R}$, whose elements are called *real numbers*.
Let there be two functions $+, \cdot : \mathbb{R}^2 \to \mathbb{R}$.
Let there be a relation $< \subseteq \mathbb{R}^2$.

**Axiom 11.1** (Associativity of Addition)**.**

$$\forall x, y, z \in \mathbb{R}.x + (y + z) = (x + y) + z$$

**Axiom 11.2** (Associativity of Multiplication)**.**

$$\forall x, y, z \in \mathbb{R}.x(yz) = (xy)z$$

**Axiom 11.3** (Commutativity of Addition)**.**

$$\forall x, y \in \mathbb{R}.x + y = y + x$$

**Axiom 11.4** (Commutativity of Multiplication)**.**

$$\forall x, y \in \mathbb{R}.xy = yx$$

**Axiom 11.5** (Identity for Addition)**.** *There exists a unique* $z \in \mathbb{R}$ *such that* $\forall x \in \mathbb{R}.x + z = x$.

**Definition 11.6** (Zero)**.** The real number *zero*, 0, is the unique real number such that $\forall x \in \mathbb{R}.x + 0 = x$.

**Axiom 11.7** (Identity for Multiplication)**.** *There exists a unique* $i \in \mathbb{R}$ *such that* $\forall x \in \mathbb{R}.xi = x$. *Further, we have* $i \neq 0$.

**Definition 11.8** (One)**.** The real number *one*, 1, is the unique real number such that $\forall x \in \mathbb{R}.x1 = x$.

**Axiom 11.9** (Additive Inverses)**.** *For all $x \in \mathbb{R}$, there exists a unique $y \in \mathbb{R}$ such that $x + y = 0$.*

**Axiom 11.10** (Multiplicative Inverses)**.** *For all $x \in \mathbb{R}$, if $x \neq 0$ then there exists a unique $y \in \mathbb{R}$ such that $xy = 1$.*

**Axiom 11.11** (Distributive Law)**.**

$$\forall x, y, z \in \mathbb{R}.x(y + z) = xy + xz$$

**Axiom 11.12** (Monotonicity of Addition)**.** *For all $x, y, z \in \mathbb{R}$, if $x < y$ then $x + z < y + z$.*

**Axiom 11.13** (Monotonicity of Multiplication)**.** *For all $x, y, z \in \mathbb{R}$, if $x < y$ and $0 < z$ then $xz < yz$.*

**Axiom 11.14** (Least Upper Bound Property)**.** *The relation $<$ is a strict linear order on $\mathbb{R}$ with the least upper bound property.*

## 11.2 Consequences of the Axioms

### 11.2.1 Negation

**Theorem 11.15.** *For any real numbers $x$ and $y$, if $x + y = x$ then $y = 0$.*

PROOF:
⟨1⟩1. LET: $x, y \in \mathbb{R}$
⟨1⟩2. ASSUME: $x + y = x$
⟨1⟩3. $y = 0$
PROOF:

$$\begin{aligned} y &= y + 0 && \text{(Definition of zero)} \\ &= y + (x + (-x)) && \text{(Definition of } -x) \\ &= (y + x) + (-x) && \text{(Associativity of Addition)} \\ &= (x + y) + (-x) && \text{(Commutativity of Addition)} \\ &= x + (-x) && (\langle 1 \rangle 2) \\ &= 0 && \text{(Definition of } -x) \end{aligned}$$

□

**Theorem 11.16.**

$$\forall x \in \mathbb{R}.0x = 0$$

PROOF:
⟨1⟩1. LET: $x \in \mathbb{R}$
⟨1⟩2. $xx + 0x = xx$
PROOF:

$$\begin{aligned} xx + 0x &= (x + 0)x && \text{(Distributive Law)} \\ &= xx && \text{(Definition of 0)} \end{aligned}$$

⟨1⟩3. $0x = 0$
PROOF: Theorem 11.15, ⟨1⟩2.
□

**Theorem 11.17.**

$$-0 = 0$$

PROOF: Since $0 + 0 = 0$. □

**Theorem 11.18.**

$$\forall x \in \mathbb{R}. -(-x) = x$$

PROOF: Since $-x + x = 0$. □

**Theorem 11.19.**

$$\forall x, y \in \mathbb{R}. x(-y) = -(xy)$$

PROOF:

$$\begin{aligned} x(-y) + xy &= x((-y) + y) && \text{(Distributive Law)} \\ &= x0 && \text{(Definition of } -y) \\ &= 0 && \text{(Theorem 11.16)} \end{aligned}$$ □

**Theorem 11.20.**

$$\forall x \in \mathbb{R}. (-1)x = -x$$

PROOF:

$$\begin{aligned} (-1)x &= -(1 \cdot x) && \text{(Theorem 11.19)} \\ &= -x && \text{(Definition of 1)} \end{aligned}$$ □

### 11.2.2 Subtraction

**Theorem 11.21.**

$$\forall x, y, z \in \mathbb{R}. x(y - z) = xy - xz$$

PROOF:

$$\begin{aligned} x(y - z) &= x(y + (-z)) && \text{(Definition of subtraction)} \\ &= xy + x(-z) && \text{(Distributive Law)} \\ &= xy + (-(xz)) && \text{(Theorem 11.19)} \\ &= xy - xz && \text{(Definition of subtraction)} \end{aligned}$$ □

**Theorem 11.22.**

$$\forall x, y \in \mathbb{R}. -(x + y) = -x - y$$

PROOF:

$$\begin{aligned} -(x + y) &= (-1)(x + y) && \text{(Theorem 11.20)} \\ &= (-1)x + (-1)y && \text{(Distributive Law)} \\ &= -x + (-y) && \text{(Theorem 11.20)} \\ &= -x - y && \text{(Definition of subtraction)} \end{aligned}$$ □

**Theorem 11.23.**

$$\forall x, y \in \mathbb{R}. -(x - y) = -x + y$$

PROOF:

$$\begin{aligned} -(x-y) &= -(x+(-y)) && \text{(Definition of subtraction)} \\ &= -x-(-y) && \text{(Theorem 11.22)} \\ &= -x+(-(-y)) && \text{(Definition of subtraction)} \\ &= -x+y && \text{(Theorem 11.18)} \end{aligned}$$

□

**Definition 11.24** (Reciprocal)**.** Given $x \in \mathbb{R}$ with $x \neq 0$, the *reciprocal* of $x$, $1/x$, is the unique real number such that $x \cdot 1/x = 1$.

**Theorem 11.25.** *For any real numbers $x$ and $y$, if $x \neq 0$ and $xy = x$ then $y = 1$.*

PROOF:
⟨1⟩1. LET: $x, y \in \mathbb{R}$
⟨1⟩2. ASSUME: $x \neq 0$
⟨1⟩3. ASSUME: $xy = x$
⟨1⟩4. $y = 1$
PROOF:

$$\begin{aligned} y &= y1 && \text{(Definition of 1)} \\ &= y(x \cdot 1/x) && \text{(Definition of } 1/x, \langle 1\rangle 2) \\ &= (yx)1/x && \text{(Associativity of Multiplication)} \\ &= (xy)1/x && \text{(Commutativity of Multiplication)} \\ &= x \cdot 1/x && (\langle 1\rangle 3) \\ &= 1 && \text{(Definition of } 1/x, \langle 1\rangle 2) \end{aligned}$$

□

**Definition 11.26** (Quotient)**.** Given real numbers $x$ and $y$ with $y \neq 0$, the *quotient* $x/y$ is defined by

$$x/y = x \cdot 1/y \ .$$

**Theorem 11.27.** *For any real number $x$, if $x \neq 0$ then $x/x = 1$.*

PROOF: Immediate from definitions. □

**Theorem 11.28.**

$$\forall x \in \mathbb{R}. x/1 = x$$

PROOF:
⟨1⟩1. LET: $x \in \mathbb{R}$
⟨1⟩2. $1/1 = 1$
PROOF: Since $1 \cdot 1 = 1$.
⟨1⟩3. $x/1 = x$
PROOF: Since $x/1 = x \cdot 1/1 = x \cdot 1 = x$.
□

**Theorem 11.29.** *For any real numbers $x$ and $y$, if $x \neq 0$ and $y \neq 0$ then $xy \neq 0$.*

PROOF:
$\langle 1 \rangle 1$. LET: $x, y \in \mathbb{R}$
$\langle 1 \rangle 2$. ASSUME: $xy = 0$ and $x \neq 0$
PROVE: $y = 0$
$\langle 1 \rangle 3$. $y = 0$
PROOF:

$$\begin{aligned} y &= 1y && \text{(Definition of 1)} \\ &= (1/x)xy && \text{(Definition of } 1/x, \langle 1 \rangle 2) \\ &= (1/x)0 && (\langle 1 \rangle 2) \\ &= 0 && \text{(Theorem 11.16)} \end{aligned}$$

□

**Theorem 11.30.** *For any real numbers $y$ and $z$, if $y \neq 0$ and $z \neq 0$ then $(1/y)(1/z) = 1/(yz)$.*

PROOF: Since $yz(1/y)(1/z) = 1 \cdot 1 = 1$. □

**Corollary 11.30.1.** *For any real numbers $x$, $y$, $z$, $w$ with $y \neq 0 \neq w$, we have $(x/y)(z/w) = (xz)/(yw)$.*

**Theorem 11.31.** *For any real numbers $x$, $y$, $z$, $w$ with $y \neq 0 \neq w$, we have*

$$\frac{x}{y} + \frac{z}{w} = \frac{xw + yz}{yw}$$

PROOF:

$$\begin{aligned} yw\left(\frac{x}{y} + \frac{z}{w}\right) &= yw\frac{x}{y} + yw\frac{z}{w} \\ &= wx + yz \end{aligned}$$

□

**Theorem 11.32.** *For any real number $x$, if $x \neq 0$ then $1/x \neq 0$.*

PROOF: Since $x \cdot 1/x = 1 \neq 0$. □

**Theorem 11.33.** *For any real numbers $w$, $z$, if $w \neq 0 \neq z$ then $1/(w/z) = z/w$.*

PROOF: Since $(z/w)(w/z) = (wz)/(wz) = 1$. □

**Theorem 11.34.** *For any real numbers $a$, $x$ and $y$, if $y \neq 0$ then $(ax)/y = a(x/y)$*

PROOF: Since $ya(x/y) = ax$. □

**Theorem 11.35.** *For any real numbers $x$ and $y$, if $y \neq 0$ then $(-x)/y = x/(-y) = -(x/y)$.*

PROOF:

⟨1⟩1. $(-x)/y = -(x/y)$
PROOF: Take $a = -1$ in Theorem 11.34.
⟨1⟩2. $x/(-y) = -(x/y)$
PROOF: Since $(-y)(-(x/y)) = y(x/y) = x$.
□

**Theorem 11.36.** *For any real numbers $x$, $y$, $z$ and $w$, if $x > y$ and $w > z$ then $x + w > y + z$.*

PROOF: We have $y + z < x + z < x + w$ by Monotonicity of Addition twice. □

**Corollary 11.36.1.** *For any real numbers $x$ and $y$, if $x > 0$ and $y > 0$ then $x + y > 0$.*

**Theorem 11.37.** *For any real numbers $x$ and $y$, if $x > 0$ and $y > 0$ then $xy > 0$.*

PROOF:

$$\begin{aligned} xy &> 0y && \text{(Monotonicity of Multiplication)} \\ &= 0 && \text{(Theorem 11.16)} \end{aligned}$$

□

**Theorem 11.38.** *For any real number $x$, we have $x > 0$ iff $-x < 0$.*

PROOF:
⟨1⟩1. If $0 < x$ then $-x < 0$
PROOF: By Monotonicity of Addition adding $-x$ to both sides.
⟨1⟩2. If $-x < 0$ then $0 < x$
PROOF: By Monotonicity of Addition adding $x$ to both sides.
□

**Theorem 11.39.** *For any real numbers $x$ and $y$, we have $x > y$ iff $-x < -y$.*

PROOF:
⟨1⟩1. If $y < x$ then $-x < -y$.
PROOF: By Monotonicity of Addition adding $-x - y$ to both sides.
⟨1⟩2. If $-x < -y$ then $y < x$.
PROOF: By Monotonicity of Addition adding $x + y$ to both sides.
□

**Theorem 11.40.** *For any real numbers $x$, $y$ and $z$, if $x > y$ and $z < 0$ then $xz < yz$.*

PROOF:
⟨1⟩1. LET: $x$, $y$ and $z$ be real numbers.
⟨1⟩2. ASSUME: $x > y$
⟨1⟩3. ASSUME: $z < 0$
⟨1⟩4. $-z > 0$
PROOF: Theorem 11.38, ⟨1⟩3.
⟨1⟩5. $x(-z) > y(-z)$

PROOF: ⟨1⟩2, ⟨1⟩4, Monotonicity of Multiplication.
⟨1⟩6. $-(xz) > -(yz)$
PROOF: Theorem 11.19, ⟨1⟩5.
⟨1⟩7. $xz < yz$
PROOF: Theorem 11.38, ⟨1⟩6.
□

**Theorem 11.41.** *For any real number $x$, if $x \neq 0$ then $xx > 0$.*

PROOF:
⟨1⟩1. If $x > 0$ then $xx > 0$
PROOF: By Monotonicity of Multiplication.
⟨1⟩2. If $x < 0$ then $xx > 0$
PROOF: Theorem 11.40.
□

**Theorem 11.42.**

$$0 < 1$$

PROOF: By Theorem 11.41 since $1 = 1 \cdot 1$. □

**Definition 11.43** (Positive)**.** A real number $x$ is *positive* iff $x > 0$.
We write $\mathbb{R}_+$ for the set of positive reals.

**Theorem 11.44.** *For any real numbers $x$ and $y$, we have $xy$ is positive if and only if $x$ and $y$ are both positive or both negative.*

PROOF: By the Monotonicity of Multiplication and Theorem 11.40. □

**Corollary 11.44.1.** *For any real number $x$, if $x > 0$ then $1/x > 0$.*

PROOF: Since $x \cdot 1/x = 1$ is positive. □

**Theorem 11.45.** *For any real numbers $x$ and $y$, if $x > y > 0$ then $1/x < 1/y$.*

PROOF: If $1/y \leqslant 1/x$ then $1 < 1$ by Monotonicity of Multiplication. □

**Theorem 11.46.** *For any real numbers $x$ and $y$, if $x < y$ then $x < (x+y)/2 < y$.*

PROOF: We have $2x < x + y$ and $x + y < 2y$ by Monotonicity of Addition, hence $x < (x + y)/2 < y$ by Monotonicity of Multiplication since $1/2 > 0$. □

**Corollary 11.46.1.** $\mathbb{R}$ *is a linear continuum.*

**Definition 11.47** (Negative)**.** A real number $x$ is *negative* iff $x < 0$.
We write $\overline{\mathbb{R}_+}$ for the set of nonnegative reals.

**Theorem 11.48.** *For every positive real number $a$, there exists a unique positive real $\sqrt{a}$ such that $\sqrt{a}^2 = a$.*

PROOF:
⟨1⟩1. LET: $a$ be a positive real.

⟨1⟩2. For any real numbers $x$ and $h$, if $0 \leqslant h < 1$, then
$$(x+h)^2 < x^2 + h(2x+1) \ .$$
⟨2⟩1. LET: $x$ and $h$ be real numbers.
⟨2⟩2. ASSUME: $0 \leqslant h < 1$
⟨2⟩3. $(x+h)^2 < x^2 + h(2x+1)$
PROOF:
$$\begin{aligned}(x+h)^2 &= x^2 + 2hx + h^2 \\ &< x^2 + 2hx + h && (\langle 2\rangle 2) \\ &= x^2 + h(2x+1)\end{aligned}$$
⟨1⟩3. For any real numbers $x$ and $h$, if $h > 0$ then
$$(x-h)^2 > x^2 - 2hx \ .$$
⟨2⟩1. LET: $x$ and $h$ be real numbers.
⟨2⟩2. ASSUME: $h > 0$
⟨2⟩3. $(x-h)^2 > x^2 - 2hx$
PROOF:
$$\begin{aligned}(x-h)^2 &= x^2 - 2hx + h^2 \\ &> x^2 - 2hx && (\langle 2\rangle 2)\end{aligned}$$
⟨1⟩4. For any positive real $x$, if $x^2 < a$ then there exists $h > 0$ such that $(x+h)^2 < a$.
⟨2⟩1. LET: $x$ be a positive real.
⟨2⟩2. ASSUME: $x^2 < a$
⟨2⟩3. LET: $h = \min((a-x^2)/(2x+1), 1/2)$
⟨2⟩4. $0 < h < 1$
⟨2⟩5. $(x+h)^2 < a$
PROOF:
$$\begin{aligned}(x+h)^2 &< x^2 + h(2x+1) && (\langle 1\rangle 2) \\ &\leqslant a\end{aligned}$$
⟨1⟩5. For any positive real $x$, if $x^2 > a$ then there exists $h > 0$ such that $(x-h)^2 > a$.
⟨2⟩1. LET: $x$ be a positive real.
⟨2⟩2. ASSUME: $x^2 > a$
⟨2⟩3. LET: $h = (x^2 - a)/2x$
⟨2⟩4. $h > 0$
⟨2⟩5. $(x-h)^2 > a$
PROOF:
$$\begin{aligned}(x-h)^2 &> x^2 - 2hx \\ &= a && (\langle 2\rangle 3)\end{aligned}$$
⟨1⟩6. LET: $B = \{x \in \mathbb{R} : x^2 < a\}$
⟨1⟩7. $B$ is bounded above.
PROOF: If $a \geqslant 1$ then $a$ is an upper bound. If $a < 1$ then 1 is an upper bound.
⟨1⟩8. $B$ contains at least one positive real.
PROOF: If $a \geqslant 1$ then $1 \in B$. If $a < 1$ then $a \in B$.
⟨1⟩9. LET: $b = \sup B$
⟨1⟩10. $b^2 = a$

⟨2⟩1. $b^2 \geqslant a$
  ⟨3⟩1. ASSUME: for a contradiction $b^2 < a$
  ⟨3⟩2. PICK $h > 0$ such that $(b+h)^2 < a$
    PROOF: ⟨1⟩4
  ⟨3⟩3. $b + h \in B$
  ⟨3⟩4. Q.E.D.
    PROOF: This contradicts ⟨1⟩9.
⟨2⟩2. $b^2 \leqslant a$
  ⟨3⟩1. ASSUME: for a contradiction $b^2 > a$
  ⟨3⟩2. PICK $h > 0$ such that $(b-h)^2 > a$
    PROOF: ⟨1⟩5
  ⟨3⟩3. PICK $x \in B$ such that $b - h < x$
    PROOF: ⟨1⟩9
  ⟨3⟩4. $(b-h)^2 < x^2 < a$
  ⟨3⟩5. Q.E.D.
    PROOF: This contradicts ⟨3⟩2
⟨1⟩11. For any positive reals $b$ and $c$, if $b^2 = c^2$ then $b = c$.
  ⟨2⟩1. LET: $b$ and $c$ be positive reals.
  ⟨2⟩2. ASSUME: $b^2 = c^2$
  ⟨2⟩3. $b^2 - c^2 = 0$
  ⟨2⟩4. $(b-c)(b+c) = 0$
  ⟨2⟩5. $b - c = 0$ or $b + c = 0$
  ⟨2⟩6. $b + c \neq 0$
    PROOF: Since $b + c > 0$
  ⟨2⟩7. $b - c = 0$
  ⟨2⟩8. $b = c$
□

# Chapter 12

# Integers and Rationals

## 12.1 Positive Integers

**Definition 12.1** (Inductive)**.** A set of real numbers $A$ is *inductive* iff $1 \in A$ and $\forall x \in A.x + 1 \in A$.

**Definition 12.2** (Positive Integer)**.** The set $\mathbb{Z}_+$ of *positive integers* is the intersection of the set of inductive sets.

**Proposition 12.3.** *Every positive integer is positive.*

PROOF: The set of positive reals is inductive. □

**Proposition 12.4.** *1 is the least element of* $\mathbb{Z}_+$.

PROOF: Since $\{x \in \mathbb{R} : x \geqslant 1\}$ is inductive. □

**Proposition 12.5.** $\mathbb{Z}_+$ *is inductive.*

PROOF: 1 is an element of every inductive set, and for all $x \in \mathbb{R}$, if $x$ is an element of every inductive set then so is $x + 1$. □

**Theorem 12.6** (Principle of Induction)**.** *If $A$ is an inductive set of positive integers then $A = \mathbb{Z}_+$.*

PROOF: Immediate from definitions. □

**Theorem 12.7** (Well-Ordering Property)**.** $\mathbb{Z}_+$ *is well ordered.*

PROOF: Construct the obvious order isomorphism $\omega \cong \mathbb{Z}_+$. □

**Theorem 12.8** (Archimedean Ordering Property)**.** *The set $\mathbb{Z}_+$ is unbounded above.*

PROOF:
$\langle 1 \rangle 1$. ASSUME: for a contradiction $\mathbb{Z}_+$ is bounded above.

⟨1⟩2. LET:
$s = \sup \mathbb{Z}_+$
⟨1⟩3. PICK $n \in \mathbb{Z}_+$ such that $s - 1 < n$
⟨1⟩4. $s < n + 1$
⟨1⟩5. Q.E.D.
PROOF: ⟨1⟩2 and ⟨1⟩4 form a contradiction.
□

### 12.1.1 Exponentiation

**Definition 12.9.** For $a$ a real number and $n$ a positive integer, define the real number $a^n$ recursively as follows:

$$a^1 = a$$
$$a^{n+1} = a^n a$$

**Theorem 12.10.** *For all $a \in \mathbb{R}$ and $m, n \in mathbbZ_+$, we have*

$$a^n a^m = a^{n+m}$$

PROOF:
⟨1⟩1. LET: $P(m)$ be the property $\forall a \in \mathbb{R}. \forall n \in \mathbb{Z}_+. a^n a^m = a^{n+m}$
⟨1⟩2. $P(1)$
PROOF: $a^n a^1 = a^n a = a^{n+1}$.
⟨1⟩3. $\forall m \in \mathbb{Z}_+. P(m) \Rightarrow P(m+1)$
⟨2⟩1. LET: $m$ be a positive integer.
⟨2⟩2. ASSUME: $P(m)$
⟨2⟩3. LET: $a \in \mathbb{R}$
⟨2⟩4. LET: $n \in \mathbb{Z}_+$
⟨2⟩5. $a^n a^{m+1} = a^{n+m+1}$
PROOF:

$$\begin{aligned} a^n a^{m+1} &= a^n a^m a \\ &= a^{n+m} a && (\langle 2 \rangle 2) \\ &= a^{n+m+1} \end{aligned}$$

⟨1⟩4. Q.E.D.
PROOF: By induction.
□

**Theorem 12.11.** *For all $a \in \mathbb{R}$ and $m, n \in \mathbb{Z}_+$,*

$$(a^n)^m = a^{nm} \quad .$$

PROOF:
⟨1⟩1. LET: $P(m)$ be the property $\forall a \in \mathbb{R}. \forall n \in \mathbb{Z}_+. (a^n)^m = a^{nm}$.
⟨1⟩2. $P(1)$
PROOF: $(a^n)^1 = a^n = a^{n \cdot 1}$

⟨1⟩3. $\forall m \in \mathbb{Z}_+ . P(m) \Rightarrow P(m+1)$

PROOF:

$$\begin{aligned}(a^n)^{m+1} &= (a^n)^m a^n \\ &= a^{nm} a^n \\ &= a^{nm+n} && \text{(Theorem 12.10)} \\ &= a^{n(m+1)}\end{aligned}$$

□

**Theorem 12.12.** *For any real numbers $a$ and $b$ and positive integer $m$,*

$$a^m b^m = (ab)^m \ .$$

PROOF: Induction on $m$. □

## 12.2 Integers

**Definition 12.13** (Integer)**.** The set $\mathbb{Z}$ of *integers* is

$$\mathbb{Z} = \mathbb{Z}_+ \cup \{0\} \cup \{-x : x \in \mathbb{Z}_+\} \ .$$

**Proposition 12.14.** *The sum, difference and product of two integers is an integer.*

PROOF: Easy. □

**Example 12.15.** $1/2$ is not an integer.

**Proposition 12.16.** *For any integer $n$, there is no integer $a$ such that $n < a < n+1$.*

PROOF:

⟨1⟩1. For any positive integer $n$, there is no integer $a$ such that $n < a < n+1$.

⟨2⟩1. There is no integer $a$ such that $1 < a < 2$.

⟨3⟩1. There is no positive integer $a$ such that $1 < a < 2$.

⟨4⟩1. We do not have $1 < 1 < 2$.

⟨4⟩2. For any positive integer $n$, we do not have $1 < n+1 < 2$.

PROOF: Since $n \geqslant 1$ so $n+1 \geqslant 2$.

⟨3⟩2. We do not have $1 < 0 < 2$.

⟨3⟩3. For any positive integer $a$, we do not have $1 < -a < 2$.

PROOF: Since $-a < 0 < 1$.

⟨2⟩2. For any positive integer $n$, if there is no integer $a$ such that $n < a < n+1$, then there is no integer $a$ such that $n+1 < a < n+2$.

PROOF: If $n+1 < a < n+2$ then $n < a-1 < n+1$.

⟨1⟩2. There is no integer $a$ such that $0 < a < 1$.

PROOF: If $0 < a < 1$ then $1 < a+1 < 2$.

⟨1⟩3. For any positive integer $n$, there is no integer $a$ such that $-n < a < -n+1$.

PROOF: If $-n < a < -n+1$ then $n-1 < -a < n$.

□

**Theorem 12.17.** *Every nonempty subset of $\mathbb{Z}$ bounded above has a largest element.*

PROOF:
⟨1⟩1. LET: $S$ be a nonempty subset of $\mathbb{Z}$ bounded above.
⟨1⟩2. LET: $u$ be an upper bound for $S$.
⟨1⟩3. PICK an integer $n > u$
  PROOF: Archimedean property.
⟨1⟩4. LET: $k$ be the least positive integer such that $n - k \in S$.
  ⟨2⟩1. PICK $m \in S$
  ⟨2⟩2. $n - m$ is a positive integer.
  ⟨2⟩3. There exists a positive integer $k$ such that $n - k \in S$.
⟨1⟩5. $n - k$ is the greatest element in $S$.
  ⟨2⟩1. LET: $m \in S$
  ⟨2⟩2. $n - m \geqslant k$
  ⟨2⟩3. $m \leqslant n - k$
□

**Theorem 12.18.** *For any real number $x$, if $x$ is not an integer then there exists a unique integer $n$ such that $n < x < n + 1$.*

PROOF:
⟨1⟩1. $\{n \in \mathbb{Z} : n < x\}$ is a nonempty set of integers bounded above.
  ⟨2⟩1. PICK $m > -x$
    PROOF: Archimedean property.
  ⟨2⟩2. $-m < x$
  ⟨2⟩3. $\{n \in \mathbb{Z} : n < x\}$ is nonempty.
⟨1⟩2. LET: $n$ be the greatest integer such that $n < x$
⟨1⟩3. $x < n + 1$
⟨1⟩4. If $n'$ is an integer with $n' < x < n' + 1$ then $n' = n$.
  PROOF: We have $n' < n + 1$ so $n' \leqslant n$, and $n < n' + 1$ so $n \leqslant n'$.
□

**Definition 12.19** (Even)**.** An integer $n$ is *even* iff $n/2$ is an integer; otherwise, $n$ is *odd*.

**Theorem 12.20.** *If the integer $m$ is odd then there exists an integer $n$ such that $m = 2n + 1$.*

PROOF:
⟨1⟩1. LET: $n$ be the integer such that $n < m/2 < n + 1$
  PROOF: Theorem 12.18.
⟨1⟩2. $2n < m < 2n + 2$
⟨1⟩3. $m = 2n + 1$
□

**Theorem 12.21.** *The product of two odd integers is odd.*

PROOF: $(2m+1)(2n+1) = 2(2mn+m+n)+1$. □

**Corollary 12.21.1.** *If $p$ is an odd integer and $n$ is a positive integer then $p^n$ is an odd integer.*

**Definition 12.22** (Exponentiation)**.** Extend the definition of exponentiation so $a^n$ is defined for:

- all real numbers $a$ and non-negative integers $n$
- all non-zero real numbers $a$ and integers $n$

as follows:

$$\begin{aligned} a^0 &= 1 \\ a^{-n} &= 1/a^n \qquad\qquad (n \text{ a positive integer}) \end{aligned}$$

**Theorem 12.23** (Laws of Exponents)**.** *For all non-zero reals $a$ and $b$ and integers $m$ and $n$,*

$$\begin{aligned} a^n a^m &= a^{n+m} \\ (a^n)^m &= a^{nm} \\ a^m b^m &= (ab)^m \end{aligned}$$

PROOF: Easy. □

## 12.3 Rational Numbers

**Definition 12.24** (Rational Number)**.** The set $\mathbb{Q}$ of *rational numbers* is the set of all real numbers that are the quotient of two integers. A real that is not rational is *irrational*.

**Theorem 12.25.** *$\sqrt{2}$ is irrational.*

PROOF:
⟨1⟩1. For any positive rational $a$, there exist positive integers $m$ and $n$ not both even such that $a = m/n$.
  ⟨2⟩1. LET: $a$ be a positive rational.
  ⟨2⟩2. LET: $n$ be the least positive integer such that $na$ is a positive integer.
  ⟨2⟩3. LET: $m = na$
  ⟨2⟩4. ASSUME: for a contradiction $m$ and $n$ are both even.
  ⟨2⟩5. $m/2 = (n/2)a$
  ⟨2⟩6. Q.E.D.
    PROOF: This contradicts the leastness of $n$ (⟨2⟩2).
⟨1⟩2. ASSUME: for a contradiction $\sqrt{2}$ is rational.
⟨1⟩3. PICK positive integers $m$ and $n$ not both even such that $\sqrt{2} = m/n$.
⟨1⟩4. $m^2 = 2n^2$
⟨1⟩5. $m^2$ is even.

⟨1⟩6. $m$ is even.
PROOF: Theorem 12.21.
⟨1⟩7. LET: $k = m/2$
⟨1⟩8. $4k^2 = 2n^2$
⟨1⟩9. $n^2 = 2k^2$
⟨1⟩10. $n^2$ is even.
⟨1⟩11. $n$ is even.
PROOF: Theorem 12.21.
⟨1⟩12. Q.E.D.
PROOF: ⟨1⟩3, ⟨1⟩6 and ⟨1⟩11 form a contradiction.
□

**Definition 12.26** (Euclidean $n$-space)**.** For $n$ a natural number, *Euclidean $n$-space* is the set $\mathbb{R}^n$.
