Chapter 1

Sets and Classes

1.1 Classes

Our language is the language of first-order logic with equality over one primitive binary predicate \in . We call all the objects we reason about *sets*. When $a \in b$, we say a is a *member* or *element* of b , or b *contains* a . We write $b \ni a$ for $a \in b$, and $a \notin b$ for $\neg(a \in b)$. We write $\forall x \in a. \phi$ as an abbreviation for $\forall x(x \in a \rightarrow \phi)$, and $\exists x \in a. \phi$ as an abbreviation for $\exists x(x \in a \wedge \phi)$.

We shall speak informally of *classes* as an abbreviation for talking about predicates. A *class* is determined by a unary predicate $\phi[x]$ (possibly with parameters). We write $\{x \mid \phi[x]\}$ or $\{x : \phi[x]\}$ for the class determined by $\phi[x]$. We write ' a is an element of $\{x \mid \phi[x]\}$ ' or ' $a \in \{x \mid \phi[x]\}$ ' for $\phi[a]$.

We write $\{t[x_1, \dots, x_n] \mid P[x_1, \dots, x_n]\}$ for $\{y \mid \exists x_1, \dots, x_n(y = t[x_1, \dots, x_n] \wedge P[x_1, \dots, x_n])\}$.

We say two classes **A** and **B** are *equal*, and write $\mathbf{A} = \mathbf{B}$, iff $\forall x(x \in \mathbf{A} \leftrightarrow x \in \mathbf{B})$.

Proposition Schema 1.1.1. *For any class **A**, the following is a theorem.*

$$\mathbf{A} = \mathbf{A}$$

PROOF: We have $\forall x(x \in \mathbf{A} \leftrightarrow x \in \mathbf{A})$. \square

Proposition Schema 1.1.2. *For any classes **A** and **B**, the following is a theorem.*

If $\mathbf{A} = \mathbf{B}$ then $\mathbf{B} = \mathbf{A}$.

PROOF: If $\forall x(x \in \mathbf{A} \leftrightarrow x \in \mathbf{B})$ then $\forall x(x \in \mathbf{B} \leftrightarrow x \in \mathbf{A})$. \square

Proposition Schema 1.1.3. *For any classes **A**, **B** and **C**, the following is a theorem.*

If $\mathbf{A} = \mathbf{B}$ and $\mathbf{B} = \mathbf{C}$ then $\mathbf{A} = \mathbf{C}$.

PROOF: If $\forall x(x \in \mathbf{A} \leftrightarrow x \in \mathbf{B})$ and $\forall x(x \in \mathbf{B} \leftrightarrow x \in \mathbf{C})$ then $\forall x(x \in \mathbf{A} \leftrightarrow x \in \mathbf{C})$. \square

1.1.1 Subclasses

Definition 1.1.4 (Subclass). We say a class \mathbf{A} is a *subclass* of \mathbf{B} , or \mathbf{B} is a *superclass* of \mathbf{A} , or \mathbf{B} *includes* \mathbf{A} , and write $\mathbf{A} \subseteq \mathbf{B}$ or $\mathbf{B} \supseteq \mathbf{A}$, iff every element of \mathbf{A} is an element of \mathbf{B} . Otherwise we write $\mathbf{A} \not\subseteq \mathbf{B}$ or $\mathbf{B} \not\supseteq \mathbf{A}$.

We say \mathbf{A} is a *proper* subclass of \mathbf{B} , \mathbf{B} is a *proper* superclass of \mathbf{A} , or \mathbf{B} *properly* includes \mathbf{A} , and write $\mathbf{A} \subsetneq \mathbf{B}$ or $\mathbf{B} \supsetneq \mathbf{A}$, iff $\mathbf{A} \subseteq \mathbf{B}$ and $\mathbf{A} \neq \mathbf{B}$.

Proposition Schema 1.1.5. *For any class \mathbf{A} , the following is a theorem.*

$$\mathbf{A} \subseteq \mathbf{A}$$

PROOF: Every element of \mathbf{A} is an element of \mathbf{A} . \square

Proposition Schema 1.1.6. *For any classes \mathbf{A} and \mathbf{B} , the following is a theorem.*

If $\mathbf{A} \subseteq \mathbf{B}$ and $\mathbf{B} \subseteq \mathbf{A}$ then $\mathbf{A} = \mathbf{B}$.

PROOF: If every element of \mathbf{A} is an element of \mathbf{B} , and every element of \mathbf{B} is an element of \mathbf{A} , then \mathbf{A} and \mathbf{B} have exactly the same elements. \square

Proposition Schema 1.1.7. *For any classes \mathbf{A} , \mathbf{B} and \mathbf{C} , the following is a theorem.*

If $\mathbf{A} \subseteq \mathbf{B}$ and $\mathbf{B} \subseteq \mathbf{C}$ then $\mathbf{A} \subseteq \mathbf{C}$.

PROOF: If every element of \mathbf{A} is an element of \mathbf{B} and every element of \mathbf{B} is an element of \mathbf{C} then every element of \mathbf{A} is an element of \mathbf{C} . \square

1.1.2 Constructions of Classes

Definition 1.1.8 (Empty Class). The *empty class* \emptyset is $\{x \mid \perp\}$. Every other class is *nonempty*.

Definition 1.1.9 (Universal Class). The *universal class* \mathbf{V} is $\{x \mid \top\}$.

Definition 1.1.10 (Enumeration). Given objects a_1, \dots, a_n , we define the class $\{a_1, \dots, a_n\}$ to be the class $\{x \mid x = a_1 \vee \dots \vee x = a_n\}$.

Definition 1.1.11 (Intersection). For any classes \mathbf{A} and \mathbf{B} , the *intersection* $\mathbf{A} \cap \mathbf{B}$ is $\{x \mid x \in \mathbf{A} \wedge x \in \mathbf{B}\}$.

Definition 1.1.12 (Union). For any classes \mathbf{A} and \mathbf{B} , the *union* $\mathbf{A} \cup \mathbf{B}$ is $\{x \mid x \in \mathbf{A} \vee x \in \mathbf{B}\}$.

Definition 1.1.13 (Relative Complement). Let \mathbf{A} and \mathbf{B} be classes. The *relative complement* of \mathbf{B} in \mathbf{A} is the class $\mathbf{A} - \mathbf{B} := \{x \in \mathbf{A} \mid x \notin \mathbf{B}\}$.

Definition 1.1.14 (Symmetric Difference). For any classes \mathbf{A} and \mathbf{B} , the *symmetric difference* is the class $\mathbf{A} + \mathbf{B} := (\mathbf{A} - \mathbf{B}) \cup (\mathbf{B} - \mathbf{A})$.

Definition 1.1.15 (Pairwise disjoint). Let \mathbf{A} be a class. We say the elements of \mathbf{A} are *pairwise disjoint* iff, for all $x, y \in \mathbf{A}$, if $x \cap y \neq \emptyset$ then $x = y$.

1.2 Sets and the Axiom of Extensionality

Axiom 1.2.1 (Extensionality). *If two sets have exactly the same members, they are equal.*

Thanks to this axiom, we may identify a set a with the class $\{x \mid x \in a\}$. Our use of the symbols \in and $=$ is consistent. We say a class \mathbf{A} *is a set* iff there exists a set a such that $a = \mathbf{A}$; that is, $\{x \mid \phi[x]\}$ is a set iff $\exists a \forall x (x \in a \leftrightarrow \phi[x])$. Otherwise, \mathbf{A} is a *proper class*.

Definition 1.2.2 (Subset). If A is a set and $A \subseteq \mathbf{B}$, we say A is a *subset* of \mathbf{B} .

Definition 1.2.3 (Union). The *union* of a class \mathbf{A} is $\{x \mid \exists X \in \mathbf{A}. x \in X\}$. We write $\bigcup_{P(x)} t(x)$ for $\bigcup \{t(x) \mid P(x)\}$.

Definition 1.2.4 (Intersection). The *intersection* of a class \mathbf{A} is $\{x \mid \forall X \in \mathbf{A}. x \in X\}$. We write $\bigcap_{P(x)} t(x)$ for $\bigcap \{t(x) \mid P(x)\}$.

Definition 1.2.5 (Power Class). For any class \mathbf{A} , the *power class* $\mathcal{P}\mathbf{A}$ is $\{X \mid X \subseteq \mathbf{A}\}$.

1.3 The Other Axioms

Axiom 1.3.1 (Union). *The union of a set is a set.*

Axiom 1.3.2 (Power Set). *The power class of a set is a set, which we call a power set.*

Axiom 1.3.3 (Infinity). *There exists a set I such that:*

- *There exists an element of I that has no members*
- *For every $x \in I$, there exists a set $y \in I$ such that the elements of y are exactly x and the members of x .*

Axiom 1.3.4 (Choice). *For any set A of pairwise disjoint, nonempty sets, there exists a set C such that, for all $x \in A$, we have $x \cap C$ has exactly one element.*

Axiom Schema 1.3.5 (Replacement). *For any predicate $P(x, y)$, the following is an axiom:*

Let A be a set. Assume that, for all $x \in A$, there exists at most one y such that $P(x, y)$. Then $\{y \mid \exists x \in A. P(x, y)\}$ is a set.

Axiom 1.3.6 (Regularity). *For any A , if A has a member, then there exists $m \in A$ such that $m \cap A = \emptyset$.*

1.4 Consequences of the Axioms

Proposition 1.4.1. *The empty class \emptyset is a set.*

PROOF: Immediate from the Axiom of Infinity. \square

Proposition 1.4.2 (Russell's Paradox). *The class $\{x \mid x \notin x\}$ is a proper class.*

PROOF: Assume for a contradiction $R = \{x \mid x \notin x\}$ is a set. Then $R \in R$ if and only if $R \notin R$, which is impossible. \square

Proposition 1.4.3 (Pairing). *For any sets a and b , the class $\{a, b\}$ is a set.*

PROOF:

$\langle 1 \rangle 1$. LET: $P(x, y)$ be the predicate $(x = \emptyset \wedge y = a) \vee (x = \mathcal{P}\emptyset \wedge y = b)$.

$\langle 1 \rangle 2$. For all $x \in \mathcal{P}\mathcal{P}\emptyset$, there exists at most one y such that $P(x, y)$.

$\langle 2 \rangle 1$. LET: $x \in \mathcal{P}\mathcal{P}\emptyset$

$\langle 2 \rangle 2$. LET: y and y' be sets.

$\langle 2 \rangle 3$. ASSUME: $P(x, y)$ and $P(x, y')$

$\langle 2 \rangle 4$. $(x = \emptyset \wedge y = a) \vee (x = \mathcal{P}\emptyset \wedge y = b)$

PROOF: From $\langle 2 \rangle 3$.

$\langle 2 \rangle 5$. $(x = \emptyset \wedge y' = a) \vee (x = \mathcal{P}\emptyset \wedge y' = b)$

PROOF: From $\langle 2 \rangle 3$.

$\langle 2 \rangle 6$. $\emptyset \neq \mathcal{P}\emptyset$

PROOF: Since $\emptyset \in \mathcal{P}\emptyset$ and $\emptyset \notin \emptyset$.

$\langle 2 \rangle 7$. $y = y'$

$\langle 1 \rangle 3$. LET: A be the set $\{y \mid \exists x \in \mathcal{P}\mathcal{P}\emptyset. P(x, y)\}$.

$\langle 1 \rangle 4$. $A = \{a, b\}$

\square

Proposition 1.4.4. *The union of two sets is a set.*

PROOF: Because $A \cup B = \bigcup \{A, B\}$. \square

Proposition Schema 1.4.5. *For any number n , the following is a theorem:*

For any sets a_1, \dots, a_n , the class $\{a_1, \dots, a_n\} = \{x \mid x = a_1 \vee \dots \vee x = a_n\}$ is a set.

PROOF: The case $n = 1$ follows from Pairing since $\{a\} = \{a, a\}$.

If we have proved the theorem for n we have $\{a_1, \dots, a_n, a_{n+1}\} = \{a_1, \dots, a_n\} \cup \{a_{n+1}\}$. \square

Proposition Schema 1.4.6 (Comprehension). *For any predicate $P(x)$, the following is a theorem:*

For any set A , the class $\{x \in A \mid P(x)\}$ is a set.

PROOF:

$\langle 1 \rangle 1$. LET: A be a set.

$\langle 1 \rangle 2$. LET: $Q(x, y)$ be the predicate $P(x) \wedge y = x$.

$\langle 1 \rangle 3$. For all $x \in A$, there exists at most one y such that $Q(x, y)$.

⟨2⟩1. LET: $x \in A$
 ⟨2⟩2. LET: y and y' be sets.
 ⟨2⟩3. ASSUME: $Q(x, y)$ and $Q(x, y')$
 ⟨2⟩4. $x \in A \wedge P(x) \wedge y = x \wedge y' = x$
 PROOF: From ⟨2⟩3.
 ⟨2⟩5. $y = y'$
 PROOF: From ⟨2⟩4.
 ⟨1⟩4. LET: B be the set $\{y \mid \exists x \in A. Q(x, y)\}$
 PROOF: This is a set by an Axiom of Replacement and ⟨1⟩3.
 ⟨1⟩5. $B = \{y \in A \mid P(y)\}$
 PROOF:

$$y \in B \Leftrightarrow \exists x \in A. Q(x, y) \quad ((1)4)$$

$$\Leftrightarrow \exists x \in A. (P(x) \wedge y = x) \quad ((1)2)$$

$$\Leftrightarrow P(y)$$

□

Corollary Schema 1.4.6.1. *For any class \mathbf{A} , the following is a theorem:
For any set B , if $\mathbf{A} \subseteq B$ then \mathbf{A} is a set.*

Corollary 1.4.6.1. *The universal class \mathbf{V} is a proper class.*

Corollary 1.4.6.2. *The intersection of a set and a class is a set.*

Corollary 1.4.6.3. *The relative complement of a class in a set is a set.*

Corollary 1.4.6.4. *The symmetric difference of two sets is a set.*

Corollary 1.4.6.5. *The intersection of a nonempty class is a set.*

Proposition Schema 1.4.7. *For any classes \mathbf{A} and \mathbf{B} , the following is a theorem:*

If $\mathbf{A} \subseteq \mathbf{B}$ then $\mathcal{P}\mathbf{A} \subseteq \mathcal{P}\mathbf{B}$.

PROOF: Every subset of \mathbf{A} is a subset of \mathbf{B} . □

Proposition Schema 1.4.8. *For any class \mathbf{A} , the following is a theorem:*

$$\mathbf{A} = \bigcup \mathcal{P}\mathbf{A}$$

PROOF:

⟨1⟩1. $\mathbf{A} \subseteq \bigcup \mathcal{P}\mathbf{A}$

PROOF: For all $x \in \mathbf{A}$ we have $x \in \{x\} \in \mathcal{P}\mathbf{A}$.

⟨1⟩2. $\bigcup \mathcal{P}\mathbf{A} \subseteq \mathbf{A}$

⟨2⟩1. LET: $x \in \bigcup \mathcal{P}\mathbf{A}$

⟨2⟩2. PICK $X \in \mathcal{P}\mathbf{A}$ such that $x \in X$

⟨2⟩3. $X \subseteq \mathbf{A}$

⟨2⟩4. $x \in \mathbf{A}$

□

1.5 Transitive Classes

Definition 1.5.1 (Transitive Class). A class \mathbf{A} is a *transitive class* iff whenever $x \in y \in \mathbf{A}$ then $x \in \mathbf{A}$.

Proposition Schema 1.5.2. *For any class \mathbf{A} , the following is a theorem:
The following are equivalent.*

1. \mathbf{A} is a transitive class.
2. $\bigcup \mathbf{A} \subseteq \mathbf{A}$
3. Every element of \mathbf{A} is a subset of \mathbf{A} .
4. $\mathbf{A} \subseteq \mathcal{P}\mathbf{A}$

PROOF: Immediate from definitions. \square

Proposition Schema 1.5.3. *For any class \mathbf{A} , the following is a theorem:
If \mathbf{A} is a transitive class then $\bigcup \mathbf{A}$ is a transitive class.*

PROOF:

$\langle 1 \rangle 1$. ASSUME: \mathbf{A} is a transitive class.

$\langle 1 \rangle 2$. LET: $x \in y \in \bigcup \mathbf{A}$

$\langle 1 \rangle 3$. $y \in \mathbf{A}$

PROOF: Since $\bigcup \mathbf{A} \subseteq \mathbf{A}$ by Proposition 1.5.2.

$\langle 1 \rangle 4$. $x \in \bigcup \mathbf{A}$

\square

Proposition Schema 1.5.4. *For any class \mathbf{A} , the following is a theorem:
We have \mathbf{A} is a transitive class if and only if $\mathcal{P}\mathbf{A}$ is a transitive class.*

PROOF:

$\langle 1 \rangle 1$. If \mathbf{A} is a transitive class then $\mathcal{P}\mathbf{A}$ is a transitive class.

$\langle 2 \rangle 1$. ASSUME: \mathbf{A} is a transitive class.

$\langle 2 \rangle 2$. $\mathbf{A} \subseteq \mathcal{P}\mathbf{A}$

PROOF: Proposition 1.5.2.

$\langle 2 \rangle 3$. $\mathcal{P}\mathbf{A} \subseteq \mathcal{P}\mathcal{P}\mathbf{A}$

PROOF: Proposition 1.4.7.

$\langle 2 \rangle 4$. $\mathcal{P}\mathbf{A}$ is a transitive class.

PROOF: Proposition 1.5.2.

$\langle 1 \rangle 2$. If $\mathcal{P}\mathbf{A}$ is a transitive class then \mathbf{A} is a transitive class.

$\langle 2 \rangle 1$. ASSUME: $\mathcal{P}\mathbf{A}$ is a transitive class.

$\langle 2 \rangle 2$. $\bigcup \mathcal{P}\mathbf{A} \subseteq \mathcal{P}\mathbf{A}$

PROOF: Proposition 1.5.2.

$\langle 2 \rangle 3$. $\mathbf{A} \subseteq \mathcal{P}\mathbf{A}$

PROOF: Proposition 1.4.8.

$\langle 2 \rangle 4$. \mathbf{A} is a transitive class.

PROOF: Proposition 1.5.2.

□

Proposition Schema 1.5.5. *For any class \mathbf{A} , the following is a theorem:
If every member of \mathbf{A} is a transitive set then $\bigcup \mathbf{A}$ is a transitive class.*

PROOF:

$\langle 1 \rangle 1$. ASSUME: Every member of \mathbf{A} is a transitive set.

$\langle 1 \rangle 2$. LET: $x \in y \in \bigcup \mathbf{A}$

$\langle 1 \rangle 3$. PICK $A \in \mathbf{A}$ such that $y \in A$.

$\langle 1 \rangle 4$. $x \in A$

PROOF: Since A is a transitive set.

$\langle 1 \rangle 5$. $x \in \bigcup \mathbf{A}$

□

Proposition Schema 1.5.6. *For any class \mathbf{A} , the following is a theorem:
If every member of \mathbf{A} is a transitive set then $\bigcap \mathbf{A}$ is a transitive class.*

PROOF:

$\langle 1 \rangle 1$. ASSUME: Every member of \mathbf{A} is a transitive set.

$\langle 1 \rangle 2$. LET: $x \in y \in \bigcap \mathbf{A}$

PROVE: $x \in \bigcap \mathbf{A}$

$\langle 1 \rangle 3$. LET: $A \in \mathbf{A}$

$\langle 1 \rangle 4$. $y \in A$

$\langle 1 \rangle 5$. $x \in A$

PROOF: Since A is a transitive set.

□

Chapter 2

Relations

2.1 Ordered Pairs

Definition 2.1.1 (Ordered Pair). For any sets a and b , the *ordered pair* (a, b) is defined to be $\{\{a\}, \{a, b\}\}$.

Theorem 2.1.2. For any sets a, b, c, d , we have $(a, b) = (c, d)$ if and only if $a = c$ and $b = d$.

PROOF:

$\langle 1 \rangle 1$. If $(a, b) = (c, d)$ then $a = c$ and $b = d$.

$\langle 2 \rangle 1$. ASSUME: $\{\{a\}, \{a, b\}\} = \{\{c\}, \{c, d\}\}$

$\langle 2 \rangle 2$. $\bigcap \{\{a\}, \{a, b\}\} = \bigcap \{\{c\}, \{c, d\}\}$

$\langle 2 \rangle 3$. $\{a\} = \{c\}$

$\langle 2 \rangle 4$. $a = c$

$\langle 2 \rangle 5$. $\bigcup \{\{a\}, \{a, b\}\} = \bigcup \{\{c\}, \{c, d\}\}$

$\langle 2 \rangle 6$. $\{a, b\} = \{c, d\}$

$\langle 2 \rangle 7$. $b = c$ or $b = d$

$\langle 2 \rangle 8$. $a = d$ or $b = d$

$\langle 2 \rangle 9$. If $b = c$ and $a = d$ then $b = d$

PROOF: By $\langle 2 \rangle 4$.

$\langle 2 \rangle 10$. $b = d$

PROOF: From $\langle 2 \rangle 7$, $\langle 2 \rangle 8$, $\langle 2 \rangle 9$.

$\langle 1 \rangle 2$. If $a = c$ and $b = d$ then $(a, b) = (c, d)$.

PROOF: First-order logic.

□

Definition 2.1.3 (Cartesian Product). The *Cartesian product* of classes \mathbf{A} and \mathbf{B} is the class $\mathbf{A} \times \mathbf{B} := \{(x, y) \mid x \in \mathbf{A}, y \in \mathbf{B}\}$.

Proposition 2.1.4. For any sets A and B , the class $A \times B$ is a set.

PROOF: It is a subset of $\mathcal{PP}(A \cup B)$. □

Proposition Schema 2.1.5. *For any classes \mathbf{A} , \mathbf{B} and \mathbf{C} , the following is a theorem:*

$$\mathbf{A} \times (\mathbf{B} \cup \mathbf{C}) = (\mathbf{A} \times \mathbf{B}) \cup (\mathbf{A} \times \mathbf{C})$$

PROOF:

$$\begin{aligned} (x, y) \in \mathbf{A} \times (\mathbf{B} \cup \mathbf{C}) &\Leftrightarrow x \in \mathbf{A} \wedge (y \in \mathbf{B} \vee y \in \mathbf{C}) \\ &\Leftrightarrow (x \in \mathbf{A} \wedge y \in \mathbf{B}) \vee (x \in \mathbf{A} \wedge y \in \mathbf{C}) \\ &\Leftrightarrow (x, y) \in (\mathbf{A} \times \mathbf{B}) \cup (\mathbf{A} \times \mathbf{C}) \quad \square \end{aligned}$$

Proposition Schema 2.1.6. *For any classes \mathbf{A} and \mathbf{B} , the following is a theorem:*

If $\mathbf{A} \times \mathbf{B} = \mathbf{A} \times \mathbf{C}$ and \mathbf{A} is nonempty then $\mathbf{B} = \mathbf{C}$.

PROOF:

- $\langle 1 \rangle 1.$ PICK $a \in \mathbf{A}$
 $\langle 1 \rangle 2.$ For all x we have $x \in \mathbf{B}$ iff $x \in \mathbf{C}$.

PROOF:

$$\begin{aligned} x \in \mathbf{B} &\Leftrightarrow (a, x) \in \mathbf{A} \times \mathbf{B} \\ &\Leftrightarrow (a, x) \in \mathbf{A} \times \mathbf{C} \\ &\Leftrightarrow x \in \mathbf{C} \end{aligned}$$

\square

Proposition Schema 2.1.7. *For any classes \mathbf{A} and \mathbf{B} , the following is a theorem:*

$$\mathbf{A} \times \bigcup \mathbf{B} = \{(a, b) \mid \exists Y \in \mathbf{B}. (a \in \mathbf{A} \wedge b \in Y)\}$$

PROOF:

$$\begin{aligned} (x, y) \in \mathbf{A} \times \bigcup \mathbf{B} &\Leftrightarrow x \in \mathbf{A} \wedge \exists Y \in \mathbf{B}. y \in Y \\ &\Leftrightarrow \exists Y \in \mathbf{B} (x \in \mathbf{A} \wedge y \in Y) \quad \square \end{aligned}$$

2.2 Relations

Definition 2.2.1 (Relation). A *relation* \mathbf{R} between classes \mathbf{A} and \mathbf{B} is a subclass of $\mathbf{A} \times \mathbf{B}$.

A *(binary) relation on \mathbf{A}* is a relation between \mathbf{A} and \mathbf{A} .

We write $x\mathbf{R}y$ for $(x, y) \in \mathbf{R}$.

2.2.1 Identity Functions

Definition 2.2.2 (Identity Function). For any class \mathbf{A} , the *identity function* or *diagonal relation* $\text{id}_{\mathbf{A}}$ on \mathbf{A} is

$$\text{id}_{\mathbf{A}} := \{(x, x) \mid x \in \mathbf{A}\} .$$

2.2.2 Inverses

Definition 2.2.3 (Inverse). The *inverse* of a relation \mathbf{R} between \mathbf{A} and \mathbf{B} is the relation \mathbf{R}^{-1} between \mathbf{B} and \mathbf{A} defined by

$$b\mathbf{R}^{-1}a \Leftrightarrow a\mathbf{R}b .$$

Proposition Schema 2.2.4. *For any classes \mathbf{A} , \mathbf{B} and \mathbf{R} , the following is a theorem:*

If \mathbf{R} is a relation between \mathbf{A} and \mathbf{B} , we have $(\mathbf{R}^{-1})^{-1} = \mathbf{R}$.

PROOF:

$$\begin{aligned} x(\mathbf{R}^{-1})^{-1}y &\Leftrightarrow y\mathbf{R}^{-1}x \\ &\Leftrightarrow x\mathbf{R}y \end{aligned}$$

□

2.2.3 Composition

Definition 2.2.5 (Composition). Let \mathbf{R} be a relation between \mathbf{A} and \mathbf{B} , and \mathbf{S} be a relation between \mathbf{B} and \mathbf{C} . The *composition* $\mathbf{S} \circ \mathbf{R}$ is the relation between \mathbf{A} and \mathbf{C} defined by

$$a(\mathbf{S} \circ \mathbf{R})c \Leftrightarrow \exists b(a\mathbf{R}b \wedge b\mathbf{S}c) .$$

Proposition Schema 2.2.6. *For any classes \mathbf{A} , \mathbf{B} , \mathbf{C} , \mathbf{R} and \mathbf{S} , the following is a theorem:*

If \mathbf{R} is a relation between \mathbf{A} and \mathbf{B} , and \mathbf{S} is a relation between \mathbf{B} and \mathbf{C} , then

$$(\mathbf{S} \circ \mathbf{R})^{-1} = \mathbf{R}^{-1} \circ \mathbf{S}^{-1} .$$

PROOF:

$$\begin{aligned} z(\mathbf{S} \circ \mathbf{R})^{-1}x &\Leftrightarrow x(\mathbf{S} \circ \mathbf{R})z \\ &\Leftrightarrow \exists y.(x\mathbf{R}y \wedge y\mathbf{S}z) \\ &\Leftrightarrow \exists y.(y\mathbf{R}^{-1}x \wedge z\mathbf{S}^{-1}y) \\ &\Leftrightarrow z(\mathbf{R}^{-1} \circ \mathbf{S}^{-1})x \end{aligned}$$

□

2.2.4 Properties of Relations

Definition 2.2.7 (Reflexive). Let \mathbf{R} be a binary relation on \mathbf{A} . Then \mathbf{R} is *reflexive* on \mathbf{A} iff $\forall x \in \mathbf{A} . (x, x) \in \mathbf{R}$.

Proposition Schema 2.2.8. *For any classes \mathbf{A} and \mathbf{R} , the following is a theorem:*

If \mathbf{R} is a reflexive relation on \mathbf{A} then so is \mathbf{R}^{-1} .

PROOF:

⟨1⟩1. LET: $x \in \mathbf{A}$

⟨1⟩2. $x\mathbf{R}x$

PROOF: Since \mathbf{R} is reflexive.

$\langle 1 \rangle 3. x\mathbf{R}^{-1}x$

□

Definition 2.2.9 (Irreflexive). A relation \mathbf{R} is *irreflexive* iff there is no x such that $(x, x) \in \mathbf{R}$.

Definition 2.2.10 (Symmetric). A relation \mathbf{R} is *symmetric* iff, whenever $(x, y) \in \mathbf{R}$, then $(y, x) \in \mathbf{R}$.

Definition 2.2.11 (Antisymmetric). A relation \mathbf{R} is *antisymmetric* iff, whenever $x\mathbf{R}y$ and $y\mathbf{R}x$, then $x = y$.

Proposition Schema 2.2.12. *For any classes \mathbf{A} and \mathbf{R} , the following is a theorem:*

If \mathbf{R} is an antisymmetric relation on \mathbf{A} then so is \mathbf{R}^{-1} .

PROOF:

$\langle 1 \rangle 1.$ ASSUME: $x\mathbf{R}^{-1}y$ and $y\mathbf{R}^{-1}x$

$\langle 1 \rangle 2.$ $y\mathbf{R}x$ and $x\mathbf{R}y$

$\langle 1 \rangle 3.$ $x = y$

PROOF: Since \mathbf{R} is antisymmetric.

□

Definition 2.2.13 (Transitive). A relation \mathbf{R} is *transitive* iff, whenever $(x, y), (y, z) \in \mathbf{R}$, then $(x, z) \in \mathbf{R}$.

Proposition Schema 2.2.14. *For any classes \mathbf{A} , \mathbf{B} and \mathbf{R} , the following is a theorem:*

If \mathbf{R} is a transitive relation between \mathbf{A} and \mathbf{B} then \mathbf{R}^{-1} is transitive.

PROOF:

$\langle 1 \rangle 1.$ ASSUME: $(x, y), (y, z) \in \mathbf{R}^{-1}$

$\langle 1 \rangle 2.$ $(y, x), (z, y) \in \mathbf{R}$

$\langle 1 \rangle 3.$ $(z, x) \in \mathbf{R}$

$\langle 1 \rangle 4.$ $(x, z) \in \mathbf{R}^{-1}$

□

2.3 n -ary Relations

Definition Schema 2.3.1. For any sets a_1, \dots, a_n , define the *ordered n -tuple* (a_1, \dots, a_n) by

$$(a_1) := a_1$$

$$(a_1, \dots, a_n, a_{n+1}) = ((a_1, \dots, a_n), a_{n+1})$$

Definition Schema 2.3.2. An *n -ary relation on \mathbf{A}* is a class of ordered n -tuples all of whose components are in \mathbf{A} .

Chapter 3

Functions

3.1 Functions

Definition 3.1.1 (Function). A *function* from \mathbf{A} to \mathbf{B} is a relation \mathbf{F} between \mathbf{A} and \mathbf{B} such that, for all $x \in \mathbf{A}$, there is only one y such that $x\mathbf{F}y$. We denote this y by $\mathbf{F}(x)$.

A *binary operation* on a class \mathbf{A} is a function $\mathbf{A}^2 \rightarrow \mathbf{A}$.

Definition 3.1.2 (Closed). Let \mathbf{F} be a function and $\mathbf{A} \subseteq \text{dom } \mathbf{F}$. Then \mathbf{A} is *closed* under \mathbf{F} iff $\forall x \in \mathbf{A}. \mathbf{F}(x) \in \mathbf{A}$.

Proposition 3.1.3. *For any class \mathbf{A} , the following is a theorem:*

$$\text{id}_{\mathbf{A}} : \mathbf{A} \rightarrow \mathbf{A}$$

PROOF: For all $x \in \mathbf{A}$, the only y such that $(x, y) \in \text{id}_{\mathbf{A}}$ is $y = x$. \square

Proposition Schema 3.1.4. *For any classes $\mathbf{A}, \mathbf{B}, \mathbf{C}, \mathbf{F}$ and \mathbf{G} , the following is a theorem:*

Assume $\mathbf{F} : \mathbf{A} \rightarrow \mathbf{B}$ and $\mathbf{G} : \mathbf{B} \rightarrow \mathbf{C}$. Then $\mathbf{G} \circ \mathbf{F} : \mathbf{A} \rightarrow \mathbf{C}$ and, for all $x \in \mathbf{A}$, we have

$$(\mathbf{G} \circ \mathbf{F})(x) = \mathbf{G}(\mathbf{F}(x)) .$$

PROOF:

$\langle 1 \rangle 1. \forall x \in \mathbf{A}. (x, \mathbf{G}(\mathbf{F}(x))) \in \mathbf{G} \circ \mathbf{F}$

PROOF: Because $(x, \mathbf{F}(x)) \in \mathbf{F}$ and $(\mathbf{F}(x), \mathbf{G}(\mathbf{F}(x))) \in \mathbf{G}$.

$\langle 1 \rangle 2. \text{ If } (x, z) \in \mathbf{F} \circ \mathbf{G} \text{ then } z = \mathbf{G}(\mathbf{F}(x))$

$\langle 2 \rangle 1. \text{ PICK } y \in \mathbf{B} \text{ such that } x\mathbf{F}y \text{ and } y\mathbf{G}z$

$\langle 2 \rangle 2. y = \mathbf{F}(x)$

$\langle 2 \rangle 3. z = \mathbf{G}(y)$

$\langle 2 \rangle 4. z = \mathbf{G}(\mathbf{F}(x))$

\square

Proposition 3.1.5. *For any set A there exists a function $F : \mathcal{P}A - \{\emptyset\} \rightarrow A$ (a choice function for A) such that, for every nonempty $B \subseteq A$, we have $F(B) \in B$.*

PROOF:

$\langle 1 \rangle 1$. LET: A be a set.

$\langle 1 \rangle 2$. LET: $\mathcal{A} = \{\{B\} \times B \mid B \in \mathcal{P}A - \{\emptyset\}\}$

$\langle 1 \rangle 3$. Every member of \mathcal{A} is nonempty.

$\langle 1 \rangle 4$. Any two distinct members of \mathcal{A} are disjoint.

$\langle 1 \rangle 5$. PICK a set C such that, for all $X \in \mathcal{A}$, we have $C \cap X$ is a singleton.

PROOF: Axiom of Choice.

$\langle 1 \rangle 6$. LET: $F = C \cap \bigcup \mathcal{A}$

$\langle 1 \rangle 7$. $F : \mathcal{P}A - \{\emptyset\} \rightarrow A$

$\langle 2 \rangle 1$. F is a function.

$\langle 3 \rangle 1$. LET: $(B, b), (B, b') \in F$

$\langle 3 \rangle 2$. $(B, b), (B, b') \in \{B\} \times B$

PROOF: Since $(B, b), (B, b') \in \bigcup \mathcal{A}$.

$\langle 3 \rangle 3$. $(B, b), (B, b') \in C \cap (\{B\} \times B)$

$\langle 3 \rangle 4$. $(B, b) = (B, b')$

PROOF: From $\langle 1 \rangle 5$.

$\langle 3 \rangle 5$. $b = b'$

$\langle 2 \rangle 2$. $\text{dom } F = \mathcal{P}A - \{\emptyset\}$

PROOF:

$B \in \text{dom } F \Leftrightarrow \exists b. (B, b) \in F$

$\Leftrightarrow \exists b. ((B, b) \in \bigcup \mathcal{A} \wedge (B, b) \in C)$

$\Leftrightarrow \exists b. \exists B' \in \mathcal{P}A - \{\emptyset\}. ((B, b) \in \{B'\} \times B' \wedge (B, b) \in C)$

$\Leftrightarrow B \in \mathcal{P}A - \{\emptyset\} \wedge \exists b \in B. (B, b) \in C$

$\Leftrightarrow B \in \mathcal{P}A - \{\emptyset\}$ $(\langle 1 \rangle 5)$

$\langle 2 \rangle 3$. $\text{ran } F \subseteq A$

$\langle 1 \rangle 8$. For every nonempty $B \subseteq A$ we have $F(B) \in B$

□

Proposition 3.1.6. *For any relation R between A and B , there exists a function $H : A \rightarrow B$ such that $H \subseteq R$ (i.e. $\forall x \in A. xRH(x)$).*

PROOF:

$\langle 1 \rangle 1$. LET: R be a relation between A and B .

$\langle 1 \rangle 2$. PICK a choice function G for B .

$\langle 1 \rangle 3$. Define $H : A \rightarrow B$ by $H(x) = G(\{y \mid xRy\})$

$\langle 1 \rangle 4$. $H \subseteq R$

□

3.1.1 Injective Functions

Definition 3.1.7 (Injective). A function $\mathbf{F} : \mathbf{A} \rightarrow \mathbf{B}$ is *one-to-one*, *injective* or an *injection*, $\mathbf{F} : \mathbf{A} \rightarrow \mathbf{B}$, iff, for all $x, y \in \mathbf{A}$, if $\mathbf{F}(x) = \mathbf{F}(y)$, then $x = y$.

Proposition 3.1.8. *For any class \mathbf{A} , the following is a theorem:*

$\text{id}_{\mathbf{A}} : \mathbf{A} \rightarrow \mathbf{A}$ is injective.

PROOF: If $\text{id}_A(x) = \text{id}_A(y)$ then immediately $x = y$. \square

Proposition Schema 3.1.9. *For any classes A, B, C, F, G , the following is a theorem:*

Assume $F : A \rightarrow B$ and $G : B \rightarrow C$. Then $G \circ F : A \rightarrow C$.

PROOF:

$\langle 1 \rangle 1$. LET: $x, y \in A$

$\langle 1 \rangle 2$. ASSUME: $(G \circ F)(x) = (G \circ F)(y)$

$\langle 1 \rangle 3$. $G(F(x)) = G(F(y))$

$\langle 1 \rangle 4$. $F(x) = F(y)$

PROOF: Since G is injective.

$\langle 1 \rangle 5$. $x = y$

PROOF: Since F is injective.

\square

Proposition 3.1.10. *Let $F : A \rightarrow B$ where A is nonempty. There exists $G : B \rightarrow A$ (a left inverse) such that $G \circ F = \text{id}_A$ if and only if F is one-to-one.*

PROOF:

$\langle 1 \rangle 1$. If there exists $G : B \rightarrow A$ such that $G \circ F = \text{id}_A$ then F is one-to-one.

$\langle 2 \rangle 1$. ASSUME: $G : B \rightarrow A$ and $G \circ F = I_A$

$\langle 2 \rangle 2$. LET: $x, y \in A$

$\langle 2 \rangle 3$. ASSUME: $F(x) = F(y)$

$\langle 2 \rangle 4$. $x = y$

PROOF: $x = G(F(x)) = G(F(y)) = y$

$\langle 1 \rangle 2$. If F is one-to-one then there exists $G : B \rightarrow A$ such that $G \circ F = I_A$.

$\langle 2 \rangle 1$. ASSUME: F is one-to-one.

$\langle 2 \rangle 2$. PICK $a \in A$

$\langle 2 \rangle 3$. LET: $G : B \rightarrow A$ be the function defined by: $G(b)$ is the (unique) $x \in A$ such that $F(x) = b$ if there exists such an x , $G(b) = a$ otherwise.

$\langle 2 \rangle 4$. For all $x \in A$ we have $G(F(x)) = x$.

\square

3.1.2 Surjective Functions

Definition 3.1.11 (Surjective). Let $F : A \rightarrow B$. We say that F is *surjective*, or maps A *onto* B , and write $F : A \rightarrow B$, iff for all $y \in B$ there exists $x \in A$ such that $F(x) = y$.

Proposition Schema 3.1.12. *For any class A , the following is a theorem:*

$\text{id}_A : A \rightarrow A$ is surjective.

PROOF: For any $y \in A$ we have $\text{id}_A(y) = y$. \square

Proposition Schema 3.1.13. *For any classes A, B, C, F and G , the following is a theorem:*

If $F : A \rightarrow B$ and $G : B \rightarrow C$, then $G \circ F : A \rightarrow C$.

PROOF:

- ⟨1⟩1. LET: $c \in \mathbf{C}$
- ⟨1⟩2. PICK $b \in \mathbf{B}$ such that $\mathbf{G}(b) = c$.
- ⟨1⟩3. PICK $a \in \mathbf{A}$ such that $\mathbf{F}(a) = b$.
- ⟨1⟩4. $(\mathbf{G} \circ \mathbf{F})(a) = c$

□

Proposition 3.1.14. *Let $F : A \rightarrow B$. There exists $H : B \rightarrow A$ (a right inverse) such that $F \circ H = \text{id}_B$ if and only if F maps A onto B .*

PROOF:

- ⟨1⟩1. If F has a right inverse then F is surjective.
 - ⟨2⟩1. ASSUME: F has a right inverse $H : B \rightarrow A$.
 - ⟨2⟩2. LET: $y \in B$
 - ⟨2⟩3. $F(H(y)) = y$
 - ⟨2⟩4. There exists $x \in A$ such that $F(x) = y$
- ⟨1⟩2. If F is surjective then F has a right inverse.
 - ⟨2⟩1. ASSUME: F is surjective.
 - ⟨2⟩2. PICK a function $H : B \rightarrow A$ such that $H \subseteq F^{-1}$

PROOF: Proposition 3.1.6.

- ⟨2⟩3. $F \circ H = \text{id}_B$
 - ⟨3⟩1. LET: $y \in B$
 - ⟨3⟩2. $(y, H(y)) \in F^{-1}$
 - ⟨3⟩3. $F(H(y)) = y$

□

3.1.3 Bijections

Definition 3.1.15 (Bijection). Let $\mathbf{F} : \mathbf{A} \rightarrow \mathbf{B}$. Then \mathbf{F} is *bijective* or a *bijection*, $\mathbf{F} : \mathbf{A} \approx \mathbf{B}$, iff it is injective and surjective.

Proposition Schema 3.1.16. *For any class \mathbf{A} , the following is a theorem:*
The identity function $\text{id}_{\mathbf{A}} : \mathbf{A} \approx \mathbf{A}$ is a bijection.

PROOF: Proposition 3.1.8 and 3.1.12. □

Proposition Schema 3.1.17. *For any classes \mathbf{A} , \mathbf{B} and \mathbf{F} , the following is a theorem:*

If $\mathbf{F} : \mathbf{A} \approx \mathbf{B}$ then $\mathbf{F}^{-1} : \mathbf{B} \approx \mathbf{A}$.

PROOF:

- ⟨1⟩1. $\mathbf{F}^{-1} : \mathbf{B} \rightarrow \mathbf{A}$
 - ⟨2⟩1. LET: $b \in \mathbf{B}$
 - ⟨2⟩2. PICK $a \in \mathbf{A}$ such that $\mathbf{F}(a) = b$.

PROOF: Since \mathbf{F} is surjective.
 - ⟨2⟩3. $(b, a) \in \mathbf{F}^{-1}$
 - ⟨2⟩4. If $(b, a') \in \mathbf{F}^{-1}$ then $a' = a$.
 - ⟨3⟩1. LET: $a' \in \mathbf{A}$ such that $(b, a') \in \mathbf{F}^{-1}$

$$\langle 3 \rangle 2. \mathbf{F}(a') = \mathbf{F}(a)$$

$$\langle 3 \rangle 3. a' = a$$

PROOF: Since \mathbf{F} is injective.

$$\langle 1 \rangle 2. \mathbf{F}^{-1} \text{ is injective.}$$

$$\langle 2 \rangle 1. \text{ LET: } x, y \in \mathbf{B}$$

$$\langle 2 \rangle 2. \text{ ASSUME: } \mathbf{F}^{-1}(x) = \mathbf{F}^{-1}(y)$$

$$\langle 2 \rangle 3. x = y$$

$$\text{PROOF: } x = \mathbf{F}(\mathbf{F}^{-1}(x)) = \mathbf{F}(\mathbf{F}^{-1}(y)) = y.$$

$$\langle 1 \rangle 3. \mathbf{F}^{-1} \text{ is surjective.}$$

$$\text{PROOF: For all } a \in \mathbf{A} \text{ we have } \mathbf{F}^{-1}(\mathbf{F}(a)) = a.$$

□

Proposition Schema 3.1.18. *For any classes \mathbf{A} , \mathbf{B} , \mathbf{C} , \mathbf{F} and \mathbf{G} , the following is a theorem:*

$$\text{If } \mathbf{F} : \mathbf{A} \approx \mathbf{B} \text{ and } \mathbf{G} : \mathbf{B} \approx \mathbf{C} \text{ then } \mathbf{G} \circ \mathbf{F} : \mathbf{A} \approx \mathbf{C}.$$

PROOF: Propositions 3.1.9 and 3.1.13. □

3.1.4 Restrictions

Definition 3.1.19 (Restriction). Let $\mathbf{F} : \mathbf{A} \rightarrow \mathbf{B}$. Let $\mathbf{C} \subseteq \mathbf{A}$. The *restriction* of \mathbf{F} to \mathbf{C} , denoted $\mathbf{F} \upharpoonright \mathbf{C}$, is the function

$$\begin{aligned} \mathbf{F} \upharpoonright \mathbf{C} : \mathbf{C} &\rightarrow \mathbf{B} \\ (\mathbf{F} \upharpoonright \mathbf{C})(x) &= \mathbf{F}(x) \quad (x \in \mathbf{C}) \end{aligned}$$

3.1.5 Images

Definition 3.1.20 (Image). Let $\mathbf{F} : \mathbf{A} \rightarrow \mathbf{B}$ and $\mathbf{C} \subseteq \mathbf{A}$. The *image* of \mathbf{C} under \mathbf{F} is the class

$$\mathbf{F}(\mathbf{C}) := \{\mathbf{F}(x) \mid x \in \mathbf{C}\}.$$

Proposition Schema 3.1.21. *For any classes \mathbf{F} , \mathbf{A} and \mathbf{B} , the following is a theorem.*

$$\text{If } \mathbf{F} : \mathbf{A} \rightarrow \mathbf{B}, \text{ then for any subset } S \subseteq \mathbf{A}, \text{ the class } \mathbf{F}(S) \text{ is a set.}$$

PROOF: By an Axiom of Replacement. □

Proposition Schema 3.1.22. *For any classes \mathbf{A} , \mathbf{B} , \mathbf{C} and \mathbf{F} , the following is a theorem:*

$$\text{Assume } \mathbf{F} : \mathbf{A} \rightarrow \mathbf{B} \text{ and } \mathbf{C} \subseteq \mathcal{P}\mathbf{A}. \text{ Then}$$

$$\mathbf{F}\left(\bigcup \mathbf{C}\right) = \{y \mid \exists X \in \mathbf{C}. y \in \mathbf{F}(X)\}$$

PROOF:

$$\begin{aligned} y \in \mathbf{F}\left(\bigcup \mathbf{C}\right) &\Leftrightarrow \exists x \in \bigcup \mathbf{C}. y = \mathbf{F}(x) \\ &\Leftrightarrow \exists x. \exists X. X \in \mathbf{C} \wedge x \in X \wedge y = \mathbf{F}(x) \\ &\Leftrightarrow \exists X \in \mathbf{C}. y \in \mathbf{F}(X) \end{aligned}$$

□

Proposition Schema 3.1.23. *For any classes \mathbf{A} , \mathbf{B} , \mathbf{C} , \mathbf{D} and \mathbf{F} , the following is a theorem:*

Assume $\mathbf{F} : \mathbf{A} \rightarrow \mathbf{B}$ and $\mathbf{C}, \mathbf{D} \subseteq \mathbf{A}$. Then

$$\mathbf{F}(\mathbf{C} \cup \mathbf{D}) = \mathbf{F}(\mathbf{C}) \cup \mathbf{F}(\mathbf{D}) .$$

PROOF:

$$\begin{aligned} y \in \mathbf{F}(\mathbf{C} \cup \mathbf{D}) &\Leftrightarrow \exists x \in \mathbf{C} \cup \mathbf{D}. y = \mathbf{F}(x) \\ &\Leftrightarrow \exists x \in \mathbf{C}. y = \mathbf{F}(x) \vee \exists x \in \mathbf{D}. y = \mathbf{F}(x) \\ &\Leftrightarrow y \in \mathbf{F}(\mathbf{C}) \cup \mathbf{F}(\mathbf{D}) \quad \square \end{aligned}$$

Proposition 3.1.24. *For any classes \mathbf{F} , \mathbf{A} , \mathbf{B} , \mathbf{C} and \mathbf{D} , the following is a theorem:*

Assume $\mathbf{F} : \mathbf{A} \rightarrow \mathbf{B}$ and $\mathbf{C}, \mathbf{D} \subseteq \mathbf{A}$. Then

$$\mathbf{F}(\mathbf{A} \cap \mathbf{B}) \subseteq \mathbf{F}(\mathbf{A}) \cap \mathbf{F}(\mathbf{B}) .$$

Equality holds if \mathbf{F} is injective.

PROOF:

- $\langle 1 \rangle 1. \mathbf{F}(\mathbf{A} \cap \mathbf{B}) \subseteq \mathbf{F}(\mathbf{A}) \cap \mathbf{F}(\mathbf{B})$
 - $\langle 2 \rangle 1. \text{ LET: } y \in \mathbf{F}(\mathbf{A} \cap \mathbf{B})$
 - $\langle 2 \rangle 2. \text{ PICK } x \in \mathbf{A} \cap \mathbf{B} \text{ such that } y = \mathbf{F}(x)$
 - $\langle 2 \rangle 3. y \in \mathbf{F}(\mathbf{A})$
PROOF: Since $x \in \mathbf{A}$.
 - $\langle 2 \rangle 4. y \in \mathbf{F}(\mathbf{B})$
PROOF: Since $x \in \mathbf{B}$.
- $\langle 1 \rangle 2. \text{ If } \mathbf{F} \text{ is injective then } \mathbf{F}(\mathbf{A} \cap \mathbf{B}) = \mathbf{F}(\mathbf{A}) \cap \mathbf{F}(\mathbf{B}).$
 - $\langle 2 \rangle 1. \text{ ASSUME: } \mathbf{F} \text{ is injective.}$

 - ⟨3⟩2. PICK $x' \in \mathbf{B}$ such that $y = \mathbf{F}(x')$
 - ⟨3⟩3. $x = x'$
 - PROOF: ⟨2⟩1
 - ⟨3⟩4. $x \in \mathbf{B}$
 - ⟨3⟩5. Q.E.D.

PROOF: This contradicts $\langle 2 \rangle 3$.

□

3.1.6 Inverse Images

Definition 3.1.27 (Inverse Image). Let $\mathbf{F} : \mathbf{A} \rightarrow \mathbf{B}$ and $\mathbf{C} \subseteq \mathbf{B}$. Then the *inverse image* of \mathbf{C} under \mathbf{F} is

$$\mathbf{F}^{-1}(\mathbf{C}) = \{x \in \mathbf{A} \mid \mathbf{F}(x) \in \mathbf{C}\} .$$

Proposition Schema 3.1.28. *For any classes \mathbf{A} , \mathbf{B} , \mathbf{C} and \mathbf{F} , the following is a theorem:*

Assume $\mathbf{F} : \mathbf{A} \rightarrow \mathbf{B}$ and $\mathbf{C} \subseteq \mathcal{PB}$. Then

$$\mathbf{F}^{-1}\left(\bigcap \mathbf{C}\right) = \bigcap \{\mathbf{F}^{-1}(X) \mid X \in \mathbf{C}\} .$$

PROOF:

$$\begin{aligned} x \in \mathbf{F}^{-1}\left(\bigcap \mathbf{C}\right) &\Leftrightarrow \mathbf{F}(x) \in \bigcap \mathbf{C} \\ &\Leftrightarrow \forall X \in \mathbf{C}. \mathbf{F}(x) \in X \\ &\Leftrightarrow \forall X \in \mathbf{C}. x \in \mathbf{F}^{-1}(X) \end{aligned} \quad \square$$

Proposition Schema 3.1.29. *For any classes \mathbf{A} , \mathbf{B} , \mathbf{C} , \mathbf{D} and \mathbf{F} , the following is a theorem:*

Assume $\mathbf{F} : \mathbf{A} \rightarrow \mathbf{B}$ and $\mathbf{C}, \mathbf{D} \subseteq \mathbf{B}$. Then

$$\mathbf{F}^{-1}(\mathbf{C} - \mathbf{D}) = \mathbf{F}^{-1}(\mathbf{C}) - \mathbf{F}^{-1}(\mathbf{D}) .$$

PROOF:

$$\begin{aligned} x \in \mathbf{F}^{-1}(\mathbf{C} - \mathbf{D}) &\Leftrightarrow \mathbf{F}(x) \in \mathbf{C} - \mathbf{D} \\ &\Leftrightarrow \mathbf{F}(x) \in \mathbf{C} \wedge \mathbf{F}(x) \notin \mathbf{D} \\ &\Leftrightarrow x \in \mathbf{F}^{-1}(\mathbf{C}) \wedge x \notin \mathbf{F}^{-1}(\mathbf{D}) \\ &\Leftrightarrow x \in \mathbf{F}^{-1}(\mathbf{C}) - \mathbf{F}^{-1}(\mathbf{D}) \end{aligned} \quad \square$$

3.1.7 Function Sets

Proposition 3.1.30. *For any classes \mathbf{B} and \mathbf{F} , the following is a theorem:*

Let A be a set. If $\mathbf{F} : A \rightarrow \mathbf{B}$ then \mathbf{F} is a set.

PROOF: By an Axiom of Replacement, we have $R = \{\mathbf{F}(x) \mid x \in A\}$ is a set. Hence \mathbf{F} is a set since $\mathbf{F} \subseteq A \times R$. □

Definition 3.1.31 (Dependent Product Class). Let I be a set and let $\mathbf{H}(i)$ be a class for all $i \in I$. We write $\prod_{i \in I} \mathbf{H}(i)$ for the class of all functions $f : I \rightarrow \bigcup_{i \in I} \mathbf{H}(i)$ such that $\forall i \in I. f(i) \in \mathbf{H}(i)$.

We write \mathbf{B}^I for $\prod_{i \in I} \mathbf{B}$ where \mathbf{B} does not depend on I .

Proposition Schema 3.1.32. *Let I be a set. Let $H(i)$ be a set for every $i \in I$. Then $\prod_{i \in I} \mathbf{H}(i)$ is a set.*

PROOF:

$\langle 1 \rangle 1.$ $\{\mathbf{H}(i) \mid i \in I\}$ is a set.

PROOF: By an Axiom of Replacement.

$\langle 1 \rangle 2.$ $\bigcup_{i \in I} \mathbf{H}(i)$ is a set.

$\langle 1 \rangle 3.$ $\prod_{i \in I} \mathbf{H}(i)$ is a set.

PROOF: It is a subset of $\mathcal{P}(I \times \bigcup_{i \in I} \mathbf{H}(i))$.

□

Proposition 3.1.33. *Let I be a set. Let $H(i)$ be a set for all $i \in I$. If $\forall i \in I. H(i) \neq \emptyset$ then $\prod_{i \in I} H(i) \neq \emptyset$.*

PROOF:

$\langle 1 \rangle 1.$ ASSUME: $\forall i \in I. H(i) \neq \emptyset$

$\langle 1 \rangle 2.$ LET: $R = \{(i, x) \mid i \in I, x \in H(i)\}$

$\langle 1 \rangle 3.$ PICK a function $f : I \rightarrow \bigcup_{i \in I} H(i)$ such that $f \subseteq R$

PROOF: Proposition 3.1.6.

$\langle 1 \rangle 4.$ $f \in \prod_{i \in I} H(i)$

□

3.2 Equinumerosity

Definition 3.2.1 (Equinumerous). Sets A and B are *equinumerous*, $A \approx B$, iff there exists a bijection between A and B .

Theorem 3.2.2 (Cantor 1873). *No set is equinumerous to its power set.*

PROOF:

$\langle 1 \rangle 1.$ ASSUME: for a contradiction $f : A \approx \mathcal{P}A$

$\langle 1 \rangle 2.$ LET: $S = \{x \in A \mid x \notin f(x)\}$

$\langle 1 \rangle 3.$ PICK $a \in A$ such that $f(a) = S$

$\langle 1 \rangle 4.$ $a \in S$ if and only if $a \notin S$

$\langle 1 \rangle 5.$ Q.E.D.

PROOF: This is a contradiction.

□

3.3 Domination

Definition 3.3.1 (Dominate). A set A is *dominated* by a set B , $A \preceq B$, iff there exists an injection $A \rightarrow B$.

Proposition 3.3.2. *Given sets A and B , if $A \neq \emptyset$ or $B = \emptyset$, then we have $A \preceq B$ iff there exists a surjective function $B \rightarrow A$.*

PROOF:

- ⟨1⟩1. If $A \preceq B$ and $A \neq \emptyset$ then there exists a surjective function $B \rightarrow A$.
 - ⟨2⟩1. ASSUME: $f : A \rightarrow B$ be injective.
 - ⟨2⟩2. PICK $a \in A$
 - ⟨2⟩3. LET: $g : B \rightarrow A$ be the function defined by $g(b) = f^{-1}(b)$ if $b \in \text{ran } f$,
and $g(b) = a$ otherwise.
 - ⟨2⟩4. g is surjective.
- ⟨1⟩2. If there exists a surjective function $B \rightarrow A$ then $A \preceq B$.
 - ⟨2⟩1. ASSUME: there exists a surjective function $g : B \rightarrow A$
 - ⟨2⟩2. $\forall a \in A. \exists b \in B. g(b) = a$
 - ⟨2⟩3. Choose a function $f : A \rightarrow B$ such that $\forall a \in A. g(f(a)) = a$
 - ⟨2⟩4. f is injective.

□

Chapter 4

Equivalence Relations

Definition 4.0.1 (Equivalence Relation). An *equivalence relation* on a class \mathbf{A} is a binary relation on \mathbf{A} that is reflexive, symmetric and transitive.

Proposition 4.0.2. *Equinumerosity is an equivalence relation on the class of all sets.*

PROOF: Propositions 3.1.16, 3.1.17, 3.1.18. \square

Definition 4.0.3 (Respects). Let \mathbf{R} be an equivalence relation on \mathbf{A} and $\mathbf{F} : \mathbf{A} \rightarrow \mathbf{B}$. Then \mathbf{F} *respects* \mathbf{A} iff, whenever $(x, y) \in \mathbf{R}$, then $\mathbf{F}(x) = \mathbf{F}(y)$.

Definition 4.0.4 (Equivalence Class). Let \mathbf{R} be an equivalence relation on \mathbf{A} and $a \in \mathbf{A}$. The *equivalence class* of a modulo \mathbf{R} is

$$[a]_{\mathbf{R}} := \{x \mid a\mathbf{R}x\} .$$

Proposition Schema 4.0.5. *For any classes \mathbf{A} and \mathbf{R} , the following is a theorem.*

Assume \mathbf{R} be an equivalence relation on \mathbf{A} . Let $a, b \in \mathbf{A}$. Then $[a]_{\mathbf{R}} = [b]_{\mathbf{R}}$ if and only if $a\mathbf{R}b$.

PROOF:

$\langle 1 \rangle 1$. If $[a]_{\mathbf{R}} = [b]_{\mathbf{R}}$ then $a\mathbf{R}b$.

$\langle 2 \rangle 1$. ASSUME: $[a]_{\mathbf{R}} = [b]_{\mathbf{R}}$

$\langle 2 \rangle 2$. $b\mathbf{R}b$

PROOF: Reflexivity

$\langle 2 \rangle 3$. $b \in [b]_{\mathbf{R}}$

$\langle 2 \rangle 4$. $b \in [a]_{\mathbf{R}}$

$\langle 2 \rangle 5$. $a\mathbf{R}b$

$\langle 1 \rangle 2$. If $a\mathbf{R}b$ then $[a]_{\mathbf{R}} = [b]_{\mathbf{R}}$.

$\langle 2 \rangle 1$. For all $x, y \in \mathbf{A}$, if $x\mathbf{R}y$ then $[y]_{\mathbf{R}} \subseteq [x]_{\mathbf{R}}$

$\langle 3 \rangle 1$. LET: $x, y \in \mathbf{A}$

$\langle 3 \rangle 2$. ASSUME: $x\mathbf{R}y$

$\langle 3 \rangle 3$. LET: $t \in [y]_{\mathbf{R}}$
 $\langle 3 \rangle 4$. $y \mathbf{R} t$
 $\langle 3 \rangle 5$. $x \mathbf{R} t$
 PROOF: Transitivity, $\langle 3 \rangle 2$, $\langle 3 \rangle 4$.
 $\langle 3 \rangle 6$. $t \in [x]_{\mathbf{R}}$
 $\langle 2 \rangle 2$. ASSUME: $a \mathbf{R} b$
 $\langle 2 \rangle 3$. $[b]_{\mathbf{R}} \subseteq [a]_{\mathbf{R}}$
 PROOF: $\langle 2 \rangle 1$, $\langle 2 \rangle 2$.
 $\langle 2 \rangle 4$. $b \mathbf{R} a$
 PROOF: Symmetry, $\langle 2 \rangle 2$.
 $\langle 2 \rangle 5$. $[a]_{\mathbf{R}} \subseteq [b]_{\mathbf{R}}$
 PROOF: $\langle 2 \rangle 1$, $\langle 2 \rangle 4$.
 $\langle 2 \rangle 6$. $[a]_{\mathbf{R}} = [b]_{\mathbf{R}}$
 PROOF: $\langle 2 \rangle 3$, $\langle 2 \rangle 5$.

□

Definition 4.0.6 (Partition). A *partition* Π of a set A is a set of nonempty subsets of A that is disjoint and exhaustive, i.e.

1. no two different sets in Π have any common elements, and
2. each element of A is in some set in Π .

Definition 4.0.7. Let R be an equivalence relation on a set A . The *quotient set* A/R is the set of all equivalence classes.

Theorem 4.0.8. Let A be a set and \mathbf{B} a class. Let R be an equivalence relation on A and $F : A \rightarrow \mathbf{B}$. Then F respects R if and only if there exists $\hat{F} : A/R \rightarrow \mathbf{B}$ such that

$$\forall a \in A. \hat{F}([a]_R) = F(a) \text{ .}$$

In this case, \hat{F} is unique.

PROOF:

$\langle 1 \rangle 1$. If F respects R then there exists $\hat{F} : A/R \rightarrow \mathbf{B}$ such that $\forall a \in A. \hat{F}([a]_R) = F(a)$.
 $\langle 2 \rangle 1$. ASSUME: F respects R .
 $\langle 2 \rangle 2$. LET: $\hat{F} = \{([a]_R, F(a)) \mid a \in A\}$
 $\langle 2 \rangle 3$. \hat{F} is a function.
 $\langle 3 \rangle 1$. ASSUME: $a, a' \in A$ and $[a]_R = [a']_R$
 PROVE: $F(a) = F(a')$
 $\langle 3 \rangle 2$. $(a, a') \in R$
 PROOF: Proposition 4.0.5.
 $\langle 3 \rangle 3$. $F(a) = F(a')$
 PROOF: $\langle 2 \rangle 1$
 $\langle 2 \rangle 4$. $\text{dom } \hat{F} = A/R$
 $\langle 2 \rangle 5$. $\text{ran } \hat{F} \subseteq \mathbf{B}$
 $\langle 2 \rangle 6$. $\forall a \in A. \hat{F}([a]_R) = F(a)$

- $\langle 1 \rangle 2$. If there exists $\hat{F} : A/R \rightarrow \mathbf{B}$ such that $\forall a \in A. \hat{F}([a]_R) = F(a)$ then F respects R .
 $\langle 2 \rangle 1$. ASSUME: $\hat{F} : A/R \rightarrow \mathbf{B}$ and $\forall a \in A. \hat{F}([a]_R) = F(a)$
 $\langle 2 \rangle 2$. LET: $a, a' \in A$
 $\langle 2 \rangle 3$. ASSUME: $(a, a') \in R$
 $\langle 2 \rangle 4$. $[a]_R = [a']_R$
 PROOF: Proposition 4.0.5.
 $\langle 2 \rangle 5$. $F(a) = F(a')$
 PROOF: $\langle 2 \rangle 1$
 $\langle 1 \rangle 3$. If $G, H : A/R \rightarrow \mathbf{B}$ and $\forall a \in A. G([a]_R) = H([a]_R)$ then $G = H$.
 \square

Proposition 4.0.9. *Let R be an equivalence relation on a set A . Then A/R is a partition of A .*

PROOF:

- $\langle 1 \rangle 1$. Every member of A/R is nonempty.
 PROOF: Since $a \in [a]_R$ by reflexivity.
 $\langle 1 \rangle 2$. No two different sets in A/R have any common elements.
 $\langle 2 \rangle 1$. LET: $[a]_R, [b]_R \in A/R$
 $\langle 2 \rangle 2$. LET: $c \in [a]_R \cap [b]_R$
 PROVE: $[a]_R = [b]_R$
 $\langle 2 \rangle 3$. aRc
 PROOF: $\langle 2 \rangle 2$
 $\langle 2 \rangle 4$. bRc
 PROOF: $\langle 2 \rangle 2$
 $\langle 2 \rangle 5$. cRb
 PROOF: Symmetry, $\langle 2 \rangle 4$
 $\langle 2 \rangle 6$. aRb
 PROOF: Transitivity, $\langle 2 \rangle 3$, $\langle 2 \rangle 5$
 $\langle 2 \rangle 7$. $[a]_R = [b]_R$
 PROOF: Proposition 4.0.5, $\langle 2 \rangle 6$
 $\langle 1 \rangle 3$. Each element of A is in some set in A/R .
 PROOF: Since $a \in [a]_R$ by reflexivity.
 \square

Proposition 4.0.10. *For any partition P of a set A , there exists a unique equivalence relation R on A such that $A/R = P$, namely xRy iff $\exists X \in P (x \in X \wedge y \in X)$.*

PROOF: Easy. \square

Definition 4.0.11 (Natural Map). Let A be a set and R an equivalence relation on A . The *natural map* $A \rightarrow A/R$ is the function that maps $a \in A$ to $[a]_R$.

Chapter 5

Ordering Relations

5.1 Partial Orders

Definition 5.1.1 (Partial Ordering). Let \mathbf{A} be a class. A *partial ordering* on \mathbf{A} is a relation \mathbf{R} on \mathbf{A} that is reflexive, antisymmetric and transitive.

We often write \leq for a partial ordering, and then write $x < y$ for $x \leq y \wedge x \neq y$.

Proposition Schema 5.1.2. *For any classes \mathbf{A} and \mathbf{R} , the following is a theorem:*

If \mathbf{R} is a partial order on \mathbf{A} then so is \mathbf{R}^{-1} .

PROOF:

$\langle 1 \rangle 1.$ \mathbf{R}^{-1} is reflexive.

PROOF: Proposition 2.2.8.

$\langle 1 \rangle 2.$ \mathbf{R}^{-1} is antisymmetric.

PROOF: Proposition 2.2.12.

$\langle 1 \rangle 3.$ \mathbf{R}^{-1} is transitive.

$\langle 2 \rangle 1.$ ASSUME: $x\mathbf{R}^{-1}y$ and $y\mathbf{R}^{-1}z$

$\langle 2 \rangle 2.$ $y\mathbf{R}x$ and $z\mathbf{R}y$

$\langle 2 \rangle 3.$ $z\mathbf{R}x$

PROOF: Since \mathbf{R} is transitive.

$\langle 2 \rangle 4.$ $x\mathbf{R}^{-1}z$

□

Proposition Schema 5.1.3. *For any classes \mathbf{A} , \mathbf{B} and \mathbf{R} , the following is a theorem:*

Assume \mathbf{R} be a partial order on \mathbf{A} and $\mathbf{B} \subseteq \mathbf{A}$. Then $\mathbf{R} \cap \mathbf{B}^2$ is a partial order on \mathbf{B} .

PROOF:

$\langle 1 \rangle 1.$ LET: $\mathbf{R}' = \mathbf{R} \cap \mathbf{B}^2$

$\langle 1 \rangle 2.$ \mathbf{R}' is reflexive.

- ⟨2⟩1. LET: $x \in \mathbf{B}$
- ⟨2⟩2. $x \in \mathbf{A}$
- ⟨2⟩3. $x\mathbf{R}x$
- ⟨2⟩4. $x\mathbf{R}'x$
- ⟨1⟩3. \mathbf{R}' is antisymmetric.
 - ⟨2⟩1. ASSUME: $x\mathbf{R}'y$ and $y\mathbf{R}'x$
 - ⟨2⟩2. $x\mathbf{R}y$ and $y\mathbf{R}x$
 - ⟨2⟩3. $x = y$
- ⟨1⟩4. \mathbf{R}' is transitive.
 - ⟨2⟩1. ASSUME: $x\mathbf{R}'y$ and $y\mathbf{R}'z$ where $x, y, z \in \mathbf{B}$
 - ⟨2⟩2. $x\mathbf{R}y$ and $y\mathbf{R}z$
 - ⟨2⟩3. $x\mathbf{R}z$
 - ⟨2⟩4. $x\mathbf{R}'z$

□

Definition 5.1.4 (Partially Ordered Set). A *partially ordered set* or *poset* is a pair (A, \leq) where A is a set and \leq is a partial ordering on A . We often write just A for (A, \leq) .

If (A, \leq) is a poset and $B \subseteq A$ we write just B for the poset $(B, \leq \cap B^2)$.

Definition 5.1.5 (Strictly Monotone). Let $(A, <_A)$ and $(B, <_B)$ be posets. A function $f : A \rightarrow B$ is *strictly monotone* iff, whenever $x <_A y$, then $f(x) <_B f(y)$.

Definition 5.1.6 (Minimal). Let \leq be a partial order on \mathbf{A} . An element $m \in \mathbf{A}$ is *minimal* iff there is no $x \in \mathbf{A}$ such that $x < m$.

Definition 5.1.7 (Maximal). Let \leq be a partial order on \mathbf{A} . An element $m \in \mathbf{A}$ is *maximal* iff there is no $x \in \mathbf{A}$ such that $m < x$.

Definition 5.1.8 (Least). Let \leq be a partial order on \mathbf{A} . An element $m \in \mathbf{A}$ is *least* iff for all $x \in \mathbf{A}$ we have $m \leq x$.

Proposition 5.1.9. *A partial order has at most one least element.*

PROOF: If m and m' are least then $m \leq m'$ and $m' \leq m$, so $m = m'$. □

Definition 5.1.10 (Greatest). Let \leq be a partial order on \mathbf{A} . An element $m \in \mathbf{A}$ is *greatest* iff for all $x \in \mathbf{A}$ we have $x \leq m$.

Proposition 5.1.11. *A poset has at most one greatest element.*

PROOF: If m and m' are greatest then $m \leq m'$ and $m' \leq m$, so $m = m'$. □

Definition 5.1.12 (Upper Bound). Let \leq be a partial ordering on \mathbf{A} and $\mathbf{B} \subseteq \mathbf{A}$. Let $u \in \mathbf{A}$. Then u is an *upper bound* for \mathbf{B} iff $\forall x \in \mathbf{B}. x \leq u$.

Definition 5.1.13 (Lower Bound). Let \leq be a partial ordering on \mathbf{A} and $\mathbf{B} \subseteq \mathbf{A}$. Let $l \in \mathbf{A}$. Then l is a *lower bound* for \mathbf{B} iff $\forall x \in \mathbf{B}. l \leq x$.

Definition 5.1.14 (Bounded Above). Let \leq be a partial ordering on \mathbf{A} and $\mathbf{B} \subseteq \mathbf{A}$. Then \mathbf{B} is *bounded above* iff it has an upper bound.

Definition 5.1.15 (Bounded Below). Let \leq be a partial ordering on \mathbf{A} and $\mathbf{B} \subseteq \mathbf{A}$. Then \mathbf{B} is *bounded below* iff it has a lower bound.

Definition 5.1.16 (Least Upper Bound). Let \leq be a partial ordering on \mathbf{A} and $\mathbf{B} \subseteq \mathbf{A}$. Let $s \in \mathbf{A}$. Then s is the *least upper bound* or *supremum* of \mathbf{B} iff s is an upper bound for \mathbf{B} and, for every upper bound u for \mathbf{B} , we have $s \leq u$.

Definition 5.1.17 (Greatest Lower Bound). Let \leq be a partial ordering on \mathbf{A} and $\mathbf{B} \subseteq \mathbf{A}$. Let $i \in \mathbf{A}$. Then i is the *greatest lower bound* or *infimum* of \mathbf{B} iff i is a lower bound for \mathbf{B} and, for every lower bound l for \mathbf{B} , we have $i \leq l$.

Definition 5.1.18 (Complete). A partial order is *complete* iff every nonempty subset bounded above has a supremum, and every nonempty subset bounded below has an infimum.

Definition 5.1.19 (Order Isomorphism). Let A and B be posets. An *order isomorphism* between A and B , $f : A \cong B$, is a bijection $f : A \approx B$ such that f and f^{-1} are monotone.

Theorem 5.1.20 (Knaster Fixed-Point Theorem). *Let A be a complete poset with a greatest and least element. Let $\phi : A \rightarrow A$ be monotone. Then there exists $a \in A$ such that $\phi(a) = a$.*

PROOF:

$\langle 1 \rangle 1$. LET: $B = \{x \in A \mid x \leq \phi(x)\}$

$\langle 1 \rangle 2$. LET: $a = \sup B$

PROOF: B is nonempty because the least element of A is in B , and it is bounded above by the greatest element of A .

$\langle 1 \rangle 3$. For all $b \in B$ we have $b \leq \phi(a)$

$\langle 2 \rangle 1$. LET: $b \in B$

$\langle 2 \rangle 2$. $b \leq \phi(b)$

$\langle 2 \rangle 3$. $b \leq a$

$\langle 2 \rangle 4$. $\phi(b) \leq \phi(a)$

$\langle 2 \rangle 5$. $b \leq \phi(a)$

$\langle 1 \rangle 4$. $a \leq \phi(a)$

$\langle 1 \rangle 5$. $\phi(a) \leq \phi(\phi(a))$

$\langle 1 \rangle 6$. $\phi(a) \in B$

$\langle 1 \rangle 7$. $\phi(a) \leq a$

$\langle 1 \rangle 8$. $\phi(a) = a$

□

Definition 5.1.21 (Dense). Let \leq be a partial order on \mathbf{A} and $\mathbf{B} \subseteq \mathbf{A}$. Then \mathbf{B} is *dense* iff, for all $x, y \in \mathbf{A}$, if $x < y$ then there exists $z \in \mathbf{B}$ such that $x < z < y$.

Proposition 5.1.22. *Let A be a complete poset with no least element. Let $B \subseteq A$ be dense. Let $\theta : A \rightarrow A$ be a monotone map that is the identity on B . Then $\theta = \text{id}_A$.*

PROOF:

$\langle 1 \rangle 1.$ LET: $a \in A$

PROVE: $\theta(a) = a$

$\langle 1 \rangle 2.$ LET: $S(a) = \{b \in B \mid b < a\}$

$\langle 1 \rangle 3.$ $S(a)$ is nonempty and bounded above.

$\langle 2 \rangle 1.$ $S(a)$ is nonempty.

$\langle 3 \rangle 1.$ PICK $a_1 < a$

PROOF: Since a is not least.

$\langle 3 \rangle 2.$ There exists $b \in B$ such that $a_1 < b < a$.

$\langle 2 \rangle 2.$ $S(a)$ is bounded above by a .

$\langle 1 \rangle 4.$ $\sup S(a) \leq a$

$\langle 1 \rangle 5.$ $\sup S(a) = a$

$\langle 2 \rangle 1.$ ASSUME: for a contradiction $\sup S(a) < a$

$\langle 2 \rangle 2.$ PICK $b \in B$ such that $\sup S(a) < b < a$

$\langle 2 \rangle 3.$ $b \in S(a)$

$\langle 2 \rangle 4.$ Q.E.D.

PROOF: This contradicts the fact that $\sup S(a) < b$.

$\langle 1 \rangle 6.$ For all $b \in S(a)$ we have $b \leq \theta(a)$

$\langle 2 \rangle 1.$ LET: $b \in S(a)$

$\langle 2 \rangle 2.$ $b < a$

$\langle 2 \rangle 3.$ $\theta(b) \leq \theta(a)$

$\langle 2 \rangle 4.$ $b \leq \theta(a)$

PROOF: $\theta(b) = b$

$\langle 1 \rangle 7.$ $a \leq \theta(a)$

PROOF: Since $a = \sup S(a)$ and $\theta(a)$ is an upper bound for $S(a)$.

$\langle 1 \rangle 8.$ $a \not\leq \theta(a)$

$\langle 2 \rangle 1.$ ASSUME: for a contradiction $a < \theta(a)$.

$\langle 2 \rangle 2.$ PICK $b \in B$ such that $a < b < \theta(a)$

$\langle 2 \rangle 3.$ $\theta(a) \leq \theta(b) = b$

$\langle 2 \rangle 4.$ Q.E.D.

PROOF: This contradicts the fact that $b < \theta(a)$.

$\langle 1 \rangle 9.$ $\theta(a) = a$

□

Theorem 5.1.23. *Let A and P be complete posets with no least or greatest element. Let B be dense in A and Q be dense in P . Every order isomorphism $\phi : B \cong Q$ extends uniquely to an order isomorphism $A \cong P$.*

PROOF:

$\langle 1 \rangle 1.$ For $a \in A$, let $S(a) = \{b \in B \mid b < a\}$.

$\langle 1 \rangle 2.$ Define $\bar{\phi} : A \rightarrow P$ by $\bar{\phi}(a) = \sup \phi(S(a))$.

$\langle 2 \rangle 1.$ $\phi(S(a))$ is nonempty.

$\langle 3 \rangle 1.$ PICK $a_1 < a$

PROOF: Since a is not least.

$\langle 3 \rangle 2.$ PICK $b \in B$ such that $a_1 < b < a$.

$\langle 3 \rangle 3.$ $\phi(b) \in \phi(S(a))$

$\langle 2 \rangle 2.$ $\phi(S(a))$ is bounded above.

⟨3⟩1. PICK $a_2 > a$

PROOF: Since a is not greatest.

⟨3⟩2. PICK $b \in B$ such that $a < b < a_2$

⟨3⟩3. $\phi(b)$ is an upper bound for $\phi(S(a))$.

⟨1⟩3. $\bar{\phi}$ is monotone.

PROOF: If $a \leq a'$ then $S(a) \subseteq S(a')$ and so $\bar{\phi}(a) \leq \bar{\phi}(a')$.

⟨1⟩4. $\bar{\phi}$ extends ϕ .

⟨2⟩1. LET: $b \in B$

PROVE: $\phi(b) = \sup \phi(S(b))$

⟨2⟩2. $\phi(b)$ is an upper bound for $\phi(S(b))$

⟨2⟩3. LET: u be any upper bound for $\phi(S(b))$

PROVE: $\phi(b) \leq u$

⟨2⟩4. ASSUME: for a contradiction $u < \phi(b)$

⟨2⟩5. PICK $q \in Q$ such that $u < q < \phi(b)$

⟨2⟩6. PICK $b' \in B$ such that $\phi(b') = q$

⟨2⟩7. $b' < b$

⟨2⟩8. $b' \in S(b)$

⟨2⟩9. $q = \phi(b') \leq u$

⟨2⟩10. Q.E.D.

PROOF: This is a contradiction.

⟨1⟩5. LET: $\bar{\psi} = \phi^{-1}$

⟨1⟩6. LET: $\bar{\psi} : P \rightarrow A$ be the function $\bar{\psi}(p) = \sup\{\psi(q) \mid q \in Q, q < p\}$

⟨1⟩7. $\bar{\psi}$ is monotone and extends ψ

PROOF: Similar.

⟨1⟩8. $\bar{\psi} \circ \bar{\phi} : A \rightarrow A$ is monotone and the identity on B .

⟨1⟩9. $\bar{\psi} \circ \bar{\phi} = \text{id}_A$

PROOF: Proposition 5.1.22.

⟨1⟩10. $\bar{\phi} \circ \bar{\psi} = \text{id}_B$

PROOF: Proposition 5.1.22.

⟨1⟩11. If $\phi^* : A \cong P$ is any order isomorphism that extends ϕ then $\phi^* = \bar{\phi}$.

⟨2⟩1. LET: $a \in A$

PROVE: $\phi^*(a) = \sup \phi(S(a))$

⟨2⟩2. $\phi^*(a)$ is an upper bound for $\phi(S(a))$

⟨2⟩3. LET: u be any upper bound for $\phi(S(a))$

PROVE: $\phi^*(a) \leq u$

⟨2⟩4. ASSUME: for a contradiction $u < \phi^*(a)$

⟨2⟩5. PICK $q \in Q$ such that $u < q < \phi^*(a)$

⟨2⟩6. PICK $b \in B$ such that $q = \phi(b)$

⟨2⟩7. $b < a$

⟨2⟩8. $b \in S(a)$

⟨2⟩9. $q = \phi(b) \leq u$

⟨2⟩10. Q.E.D.

PROOF: This is a contradiction.

□

Definition 5.1.24 (Initial Segment). Let A be a poset and $t \in A$. The *initial*

segment up to t is

$$\text{seg } t := \{x \in A \mid x < t\} .$$

5.1.1 Linear Orders

Definition 5.1.25 (Linear Ordering). Let \mathbf{A} be a class. A *linear ordering* or *total ordering* on \mathbf{A} is a partial ordering \leq on \mathbf{A} that is *total*, i.e.

$$\forall x, y \in \mathbf{A}. x \leq y \vee y \leq x$$

We often use the symbol $<$ for a linear ordering, and then write $x < y$ for $(x, y) \in <$.

Proposition 5.1.26 (Trichotomy). *For any classes \mathbf{A} and \leq , the following is a theorem:*

Assume \leq be a linear ordering on \mathbf{A} . For any $x, y \in \mathbf{A}$, exactly one of $x < y$, $x = y$, $y < x$ holds.

PROOF: Immediate from definitions. \square

Proposition Schema 5.1.27. *For any classes \mathbf{A} and $<$, the following is a theorem:*

Let $<$ be a transitive relation on \mathbf{A} that satisfies trichotomy. Define \leq on \mathbf{A} by $x \leq y$ iff $x < y$ or $x = y$. Then \leq is a linear ordering on \mathbf{A} and $x < y$ iff $x \leq y$ and $x \neq y$.

PROOF:

$\langle 1 \rangle 1.$ \leq is reflexive.

PROOF: By definition we have $\forall x \in \mathbf{A}. x \leq x$.

$\langle 1 \rangle 2.$ \leq is antisymmetric.

$\langle 2 \rangle 1.$ ASSUME: $x \leq y$ and $y \leq x$

$\langle 2 \rangle 2.$ $x < y$ or $x = y$

$\langle 2 \rangle 3.$ $y < x$ or $y = x$

$\langle 2 \rangle 4.$ We cannot have $x < y$ and $y < x$

PROOF: Trichotomy.

$\langle 2 \rangle 5.$ $x = y$

$\langle 1 \rangle 3.$ \leq is transitive.

$\langle 2 \rangle 1.$ ASSUME: $x \leq y$ and $y \leq z$

$\langle 2 \rangle 2.$ $x < y$ or $x = y$

$\langle 2 \rangle 3.$ $y < z$ or $y = z$

$\langle 2 \rangle 4.$ CASE: $x < y$ and $y < z$

PROOF: Then $x < z$ by transitivity, so $x \leq z$.

$\langle 2 \rangle 5.$ CASE: $x = y$

PROOF: Then we have $y \leq z$ and so $x \leq z$.

$\langle 2 \rangle 6.$ CASE: $y = z$

PROOF: Then we have $x \leq y$ and so $x \leq z$.

$\langle 1 \rangle 4.$ \leq is total.

PROOF: Immediate from trichotomy.

□

Proposition Schema 5.1.28. *For any classes \mathbf{A} , \mathbf{B} , \mathbf{F} , \mathbf{R} , \mathbf{S} , the following is a theorem:*

Assume \mathbf{R} is a linear order on \mathbf{A} , \mathbf{S} is a partial order on \mathbf{B} , and $\mathbf{F} : \mathbf{A} \rightarrow \mathbf{B}$. If \mathbf{F} is strictly monotone then it is injective.

PROOF:

⟨1⟩1. LET: $x, y \in \mathbf{A}$

⟨1⟩2. ASSUME: $x \neq y$

PROVE: $\mathbf{F}(x) \neq \mathbf{F}(y)$

⟨1⟩3. ASSUME: w.l.o.g. $x \mathbf{R} y$

PROOF: \mathbf{R} is total.

⟨1⟩4. $\mathbf{F}(x) \mathbf{S} \mathbf{F}(y)$ and $\mathbf{F}(x) \neq \mathbf{F}(y)$

PROOF: \mathbf{F} is strictly monotone.

□

Proposition Schema 5.1.29. *For any classes \mathbf{A} , \mathbf{B} , \leq , \preceq and \mathbf{F} , the following is a theorem:*

Assume \leq is a linear order on \mathbf{A} and \preceq is a linear order on \mathbf{B} . Assume $\mathbf{F} : \mathbf{A} \rightarrow \mathbf{B}$ and \mathbf{F} is strictly monotone. For all $x, y \in \mathbf{A}$, if $\mathbf{F}(x) \prec \mathbf{F}(y)$ then $x < y$.

PROOF:

⟨1⟩1. $\mathbf{F}(x) \neq \mathbf{F}(y)$ and $\mathbf{F}(y) \not\prec \mathbf{F}(x)$

PROOF: Trichotomy.

⟨1⟩2. $x \neq y$ and $y \not\prec x$

PROOF: \mathbf{F} is strictly monotone.

⟨1⟩3. $x < y$

PROOF: Trichotomy.

□

Proposition 5.1.30. *If \mathbf{R} is a linear ordering on \mathbf{A} then \mathbf{R}^{-1} is also a linear ordering on \mathbf{A} .*

PROOF:

⟨1⟩1. \mathbf{R}^{-1} is transitive.

PROOF: Proposition 2.2.14.

⟨1⟩2. \mathbf{R}^{-1} satisfies trichotomy.

⟨2⟩1. LET: $x, y \in \mathbf{A}$

⟨2⟩2. Exactly one of $(x, y) \in \mathbf{R}$, $(y, x) \in \mathbf{R}$, $x = y$ holds.

⟨2⟩3. Exactly one of $(y, x) \in \mathbf{R}^{-1}$, $(x, y) \in \mathbf{R}^{-1}$, $x = y$ holds.

□

Proposition 5.1.31. *Let \mathbf{R} be a linear order on \mathbf{A} and $\mathbf{B} \subseteq \mathbf{A}$. Then $\mathbf{R} \cap \mathbf{B}^2$ is a linear order on \mathbf{B} .*

PROOF: Easy. □

Definition 5.1.32 (Lexicographic Ordering). Let A and B be linearly ordered sets. The *lexicographic ordering* $<$ on $A \times B$ is defined by:

$$(a, b) < (a', b') \Leftrightarrow a < a' \vee (a = a' \wedge b < b') .$$

Proposition 5.1.33. *Let A and B be linearly ordered sets. Then the lexicographic ordering on $A \times B$ is a linear ordering.*

PROOF:

- $\langle 1 \rangle 1.$ $<$ is transitive.
 $\langle 2 \rangle 1.$ LET: $(a_1, b_1) < (a_2, b_2) < (a_3, b_3)$
 PROVE: $(a_1, b_1) < (a_3, b_3)$
 $\langle 2 \rangle 2.$ CASE: $a_1 < a_2$
 $\langle 3 \rangle 1.$ $a_2 < a_3$ or $a_2 = a_3$
 PROOF: $\langle 2 \rangle 1$
 $\langle 3 \rangle 2.$ $a_1 < a_3$
 PROOF: Transitivity
 $\langle 3 \rangle 3.$ $(a_1, b_1) < (a_3, b_3)$
 $\langle 2 \rangle 3.$ CASE: $a_1 = a_2$ and $b_1 < b_2$ and $a_2 < a_3$
 PROOF: We have $a_1 < a_3$ so $(a_1, b_1) < (a_3, b_3)$.
 $\langle 2 \rangle 4.$ CASE: $a_1 = a_2$ and $b_1 < b_2$ and $a_2 = a_3$ and $b_2 < b_3$
 PROOF: We have $a_1 = a_3$ and $b_1 < b_3$ so $(a_1, b_1) < (a_3, b_3)$.
 $\langle 1 \rangle 2.$ $<$ satisfies trichotomy.
 $\langle 2 \rangle 1.$ LET: $(a_1, b_1), (a_2, b_2) \in A \times B$
 $\langle 2 \rangle 2.$ Exactly one of $a_1 < a_2$, $a_1 = a_2$, $a_2 < a_1$ holds.
 $\langle 2 \rangle 3.$ CASE: $a_1 < a_2$
 PROOF: We have $(a_1, b_1) < (a_2, b_2)$, $(a_1, b_1) \neq (a_2, b_2)$, and $(a_2, b_2) \not< (a_1, b_1)$.
 $\langle 2 \rangle 4.$ CASE: $a_1 = a_2$
 $\langle 3 \rangle 1.$ Exactly one of $b_1 < b_2$, $b_1 = b_2$, $b_2 < b_1$ holds.
 $\langle 3 \rangle 2.$ Exactly one of $(a_1, b_1) < (a_2, b_2)$, $(a_1, b_1) = (a_2, b_2)$, $(a_2, b_2) < (a_1, b_1)$ holds.
 $\langle 2 \rangle 5.$ CASE: $a_2 < a_1$
 PROOF: We have $(a_2, b_2) < (a_1, b_1)$, $(a_2, b_2) \neq (a_1, b_1)$, and $(a_1, b_1) \not< (a_2, b_2)$.

5.1.2 Well Orderings

Definition 5.1.34 (Well Ordering). A *well ordering* on a class \mathbf{A} is a linear ordering on \mathbf{A} such that:

- For all $t \in \mathbf{A}$ we have $\text{seg } t$ is a set.
- Every nonempty subset of \mathbf{A} has a least element.

Theorem 5.1.35. *Let A and B be well ordered sets. Then one of the following holds: $A \cong B$; there exists $b \in B$ such that $A \cong \text{seg } b$; there exists $a \in A$ such that $\text{seg } a \cong B$.*

PROOF:

$\langle 1 \rangle 1$. PICK e that is not in A or B .

$\langle 1 \rangle 2$. LET: $F : A \rightarrow B \cup \{e\}$ be the function defined by transfinite recursion thus:

$$F(t) = \begin{cases} \text{the least element of } B - F(\text{seg } t) & \text{if } B - F(\text{seg } t) \neq \emptyset \\ e & \text{if } B - F(\text{seg } t) = \emptyset \end{cases}$$

$\langle 1 \rangle 3$. CASE: $e \in \text{ran } F$

$\langle 2 \rangle 1$. LET: t be least such that $F(t) = e$

$\langle 2 \rangle 2$. $F \upharpoonright \text{seg } t : \text{seg } t \cong B$

$\langle 1 \rangle 4$. CASE: $\text{ran } F = B$

PROOF: We have $F : A \cong B$

$\langle 1 \rangle 5$. CASE: $\text{ran } F \subsetneq B$

$\langle 2 \rangle 1$. LET: b be the least element of $B - \text{ran } F$

$\langle 2 \rangle 2$. $F : A \cong \text{seg } b$

□

Proposition 5.1.36. *There is at most one isomorphism between two well ordered sets.*

PROOF:

$\langle 1 \rangle 1$. LET: A and B be well ordered sets.

$\langle 1 \rangle 2$. LET: $f, g : A \cong B$ be isomorphisms.

$\langle 1 \rangle 3$. $\forall x \in A. f(x) = g(x)$

PROOF: Transfinite induction on x .

□

Proposition 5.1.37. *Let B be a poset, A a set, and $f : A \rightarrow B$ an injection. Define \leq on A by $x \leq y$ iff $f(x) \leq f(y)$.*

1. \leq is a partial order on A .
2. If B is a linearly ordered set then \leq is a linear order on A .
3. If B is a well ordered set then \leq is a well ordering on A .

PROOF: Easy. □

5.2 Transfinite Recursion

Theorem Schema 5.2.1 (Transfinite Recursion Theorem Schema). *For any property $G(x, y)$, the following is a theorem:*

Assume that $<$ is a well ordering on a set A . Assume that, for any f , there exists a unique y such that $G(f, y)$. Then there exists a unique function F such that $\text{dom } F = A$ and

$$\forall t \in A. G(F \upharpoonright \text{seg } t, F(t)) .$$

PROOF:

- ⟨1⟩1. For $t \in A$, let us say that a function v is *G-constructed up to t* iff $\text{dom } v = \{x \in A \mid x \leq t\}$ and
- $$\forall x \in \text{dom } v. G(v \upharpoonright \text{seg } x, v(x)) \text{ .}$$
- ⟨1⟩2. For all $t_1, t_2 \in A$ with $t_1 \leq t_2$, if v_1 is *G-constructed up to t_1* and v_2 is *G-constructed up to t_2* , then $\forall x \leq t_1. v_1(x) = v_2(x)$.
- ⟨2⟩1. LET: $x \in A$
- ⟨2⟩2. ASSUME: $\forall y < x. (y \leq t_1 \Rightarrow v_1(y) = v_2(y))$
- ⟨2⟩3. ASSUME: $x \leq t_1$
- ⟨2⟩4. $G(v_1 \upharpoonright \text{seg } x, v_1(x))$
- ⟨2⟩5. $G(v_2 \upharpoonright \text{seg } x, v_2(x))$
- ⟨2⟩6. $v_1 \upharpoonright \text{seg } x = v_2 \upharpoonright \text{seg } x$
- ⟨2⟩7. $v_1(x) = v_2(x)$
- ⟨2⟩8. Q.E.D.
- PROOF: By transfinite induction.
- ⟨1⟩3. Let \mathcal{K} be the set of all functions v such that there exists $t \in A$ such that v is *G-constructed up to t* .
- PROOF: By an Axiom of Replacement using ⟨1⟩2.
- ⟨1⟩4. LET: $F = \bigcup \mathcal{K}$
- ⟨1⟩5. F is a function.
- ⟨2⟩1. LET: $(x, y_1), (x, y_2) \in F$
- ⟨2⟩2. PICK $v_1, v_2 \in \mathcal{K}$ such that $v_1(x) = y_1$ and $v_2(x) = y_2$.
- ⟨2⟩3. PICK $t_1, t_2 \in A$ such that v_1 is *G-constructed up to t_1* and v_2 is *G-constructed up to t_2* .
- ⟨2⟩4. ASSUME: w.l.o.g. $t_1 \leq t_2$
- ⟨2⟩5. $v_1(x) = v_2(x)$
- PROOF: ⟨1⟩2.
- ⟨2⟩6. $y_1 = y_2$
- ⟨1⟩6. $\forall x \in \text{dom } F. G(F \upharpoonright \text{seg } x, F(x))$
- ⟨2⟩1. LET: $x \in \text{dom } F$
- ⟨2⟩2. PICK $v \in \mathcal{K}$ such that $v(x) = F(x)$
- ⟨2⟩3. PICK t such that v is *G-constructed up to t* .
- ⟨2⟩4. $G(v \upharpoonright \text{seg } x, v(x))$
- ⟨2⟩5. $v \upharpoonright \text{seg } x = F \upharpoonright \text{seg } x$
- ⟨3⟩1. LET: $y < x$
- PROVE: $v(y) = F(y)$
- ⟨3⟩2. $y \in \text{dom } F$
- PROOF: Since $y \in \text{dom } v$ and $v \in \mathcal{K}$.
- ⟨3⟩3. PICK $u \in \mathcal{K}$ such that $u(y) = F(y)$
- ⟨3⟩4. $u(y) = v(y)$
- PROOF: ⟨1⟩2.
- ⟨3⟩5. $v(y) = F(y)$
- ⟨2⟩6. $G(F \upharpoonright \text{seg } x, F(x))$
- ⟨1⟩7. $\text{dom } F = A$
- ⟨2⟩1. ASSUME: $\text{dom } F \neq A$
- ⟨2⟩2. LET: t be least in $A - \text{dom } F$
- ⟨2⟩3. $\text{seg } t = \text{dom } F$

- $\langle 2 \rangle 4$. LET: y be the unique object such that $G(F, y)$
- $\langle 2 \rangle 5$. LET: $v = F \cup \{(t, y)\}$
- $\langle 2 \rangle 6$. v is G -constructed up to t .
- $\langle 2 \rangle 7$. $t \in \text{dom } F$
- $\langle 2 \rangle 8$. Q.E.D.

PROOF: This is a contradiction.

- $\langle 1 \rangle 8$. F is unique.

PROOF: If F' also satisfies the theorem, prove $F(x) = F'(x)$ by transfinite induction on x .

□

Proposition 5.2.2. *Let \mathbf{R} be a well ordering on \mathbf{A} and $\mathbf{B} \subseteq \mathbf{A}$. Then $\mathbf{R} \cap \mathbf{B}^2$ is a well ordering on \mathbf{B} .*

PROOF: Easy. □

Theorem 5.2.3 (Transfinite Induction Principle). *Let \leq be a well ordering on \mathbf{A} . Let $\mathbf{B} \subseteq \mathbf{A}$. Assume that, for all $t \in \mathbf{A}$,*

$$\text{seg } t \subseteq \mathbf{B} \Rightarrow t \in \mathbf{B} .$$

Then $\mathbf{B} = \mathbf{A}$.

PROOF:

- $\langle 1 \rangle 1$. ASSUME: for a contradiction $\mathbf{B} \neq \mathbf{A}$
- $\langle 1 \rangle 2$. PICK $a \in \mathbf{A} - \mathbf{B}$
- $\langle 1 \rangle 3$. LET: m be the least element of $(\text{seg } a \cup \{a\}) - \mathbf{B}$
- $\langle 1 \rangle 4$. $\text{seg } m \subseteq \mathbf{B}$
- PROOF: By leastness of m .
- $\langle 1 \rangle 5$. $m \in \mathbf{B}$
- $\langle 1 \rangle 6$. Q.E.D.

PROOF: This is a contradiction.

□

Theorem 5.2.4. *Let \leq be a linear ordering on A . Assume that, for any $B \subseteq A$ such that $\forall t \in A. \text{seg } t \subseteq B \Rightarrow t \in B$, we have $B = A$. Then \leq is a well ordering on A .*

PROOF:

- $\langle 1 \rangle 1$. LET: $C \subseteq A$ be nonempty.
- $\langle 1 \rangle 2$. LET: $B = \{t \in A \mid \forall x \in C. t < x\}$
- $\langle 1 \rangle 3$. $B \cap C = \emptyset$
- $\langle 1 \rangle 4$. $B \neq A$
- $\langle 1 \rangle 5$. PICK $t \in A$ such that $\text{seg } t \subseteq B$ and $t \notin B$
- $\langle 1 \rangle 6$. t is least in C .

□

Chapter 6

Ordinal Numbers

Definition 6.0.1 (Ordinal Number). Let A be a well ordered set. Define the function E on A by transfinite recursion by:

$$E(t) = \{E(x) \mid x < t\} .$$

The *ordinal number* of A is $\alpha := \text{ran } E$.

Proposition 6.0.2. E is a bijection between A and α .

PROOF: If $s < t$ then $E(s) \in E(t)$ so $E(s) \neq E(t)$. \square

Proposition 6.0.3. For all $s, t \in A$, we have $s < t$ if and only if $E(s) \in E(t)$.

PROOF:

$\langle 1 \rangle 1$. If $s < t$ then $E(s) \in E(t)$.

PROOF: By definition of $E(t)$.

$\langle 1 \rangle 2$. If $E(s) \in E(t)$ then $s < t$.

$\langle 2 \rangle 1$. ASSUME: $E(s) \in E(t)$

$\langle 2 \rangle 2$. PICK $s' < t$ such that $E(s) = E(s')$

$\langle 2 \rangle 3$. $s = s'$

PROOF: Proposition 6.0.2.

$\langle 2 \rangle 4$. $s < t$

\square

Corollary 6.0.3.1. (A, \leq) is isomorphic to α ordered by \in .

Corollary 6.0.3.2. α is well ordered by \in .

Corollary 6.0.3.3. Two well-ordered sets are isomorphic if and only if they have the same ordinal number.

Proposition 6.0.4. α is a transitive set.

PROOF:

$\langle 1 \rangle 1$. LET: $y \in z \in \alpha$

- $\langle 1 \rangle 2$. PICK $a \in A$ such that $z = E(a)$
- $\langle 1 \rangle 3$. PICK $b < a$ such that $y = E(b)$
- $\langle 1 \rangle 4$. $y \in \alpha$

□

Theorem 6.0.5. *A set α is an ordinal number if and only if it is a transitive set well-ordered by \in .*

PROOF:

- $\langle 1 \rangle 1$. Every ordinal number is a transitive set.

PROOF: Proposition 6.0.4.

- $\langle 1 \rangle 2$. Every ordinal number is well-ordered by \in .

PROOF: Corollary 6.0.3.2.

- $\langle 1 \rangle 3$. Every transitive set well-ordered by \in is an ordinal number.

- $\langle 2 \rangle 1$. LET: α be a transitive set well-ordered by \in

- $\langle 2 \rangle 2$. LET: $E : (\alpha, \in) \cong (\beta, \in)$ be the isomorphism between (α, \in) and its ordinal number.

- $\langle 2 \rangle 3$. $\forall x \in \alpha. E(x) = x$

PROOF: By transfinite induction on x .

- $\langle 2 \rangle 4$. $\beta = \alpha$

□

Proposition 6.0.6. *Every element of an ordinal number is an ordinal number.*

PROOF:

- $\langle 1 \rangle 1$. LET: α be an ordinal number.

- $\langle 1 \rangle 2$. LET: $\beta \in \alpha$

- $\langle 1 \rangle 3$. β is a transitive set.

- $\langle 2 \rangle 1$. LET: $x \in y \in \beta$

- $\langle 2 \rangle 2$. $y \in \alpha$

PROOF: Since α is a transitive set.

- $\langle 2 \rangle 3$. $x \in \alpha$

PROOF: Since α is a transitive set.

- $\langle 2 \rangle 4$. $x \in \beta$

PROOF: Since α is well-ordered by \in .

- $\langle 1 \rangle 4$. β is well-ordered by \in .

PROOF: Since $\beta \subseteq \alpha$.

□

Proposition 6.0.7. *Given two ordinal numbers α, β , exactly one of $\alpha \in \beta$, $\alpha = \beta$, $\beta \in \alpha$ holds.*

PROOF:

- $\langle 1 \rangle 1$. At most one holds.

PROOF: Since we never have $\alpha \in \alpha$.

- $\langle 1 \rangle 2$. At least one holds.

- $\langle 2 \rangle 1$. Either $\alpha \cong \beta$ or $\exists t \in \beta. \alpha \cong \text{seg } t$ or $\exists t \in \alpha. \text{seg } t \cong \beta$.

- $\langle 2 \rangle 2$. CASE: $\alpha \cong \beta$

PROOF: Then $\alpha = \beta$ as isomorphic well-ordered sets have the same ordinal number.

$\langle 2 \rangle 3$. CASE: There exists $t \in \beta$ such that $\alpha \cong \text{seg } t$

PROOF: t is an ordinal number and $\alpha = t$, so $\alpha \in \beta$.

$\langle 2 \rangle 4$. CASE: There exists $t \in \alpha$ such that $\text{seg } t \cong \beta$

PROOF: t is an ordinal number and $t = \beta$, so $\beta \in \alpha$.

□

Proposition 6.0.8. *Any nonempty set S of ordinal numbers has a least element.*

PROOF:

$\langle 1 \rangle 1$. PICK $\beta \in S$

$\langle 1 \rangle 2$. CASE: $\beta \cap S = \emptyset$

PROOF: Then β is least in S .

$\langle 1 \rangle 3$. CASE: $\beta \cap S \neq \emptyset$

PROOF: The least element of $\beta \cap S$ is least in S .

□

Proposition 6.0.9. *Any transitive set of ordinal numbers is an ordinal number.*

PROOF: It is well-ordered by \in by the above propositions. □

Proposition 6.0.10. \emptyset is an ordinal number.

PROOF: Vacuously, it is a transitive set well-ordered by \in .

Definition 6.0.11. We define $0 = \emptyset$.

Definition 6.0.12 (Successor). The *successor* of a set a is the set $a^+ := a \cup \{a\}$.

Proposition 6.0.13. *A set a is a transitive set if and only if*

$$\bigcup (a^+) = a .$$

PROOF:

$\langle 1 \rangle 1$. If a is a transitive set then $\bigcup (a^+) = a$.

$\langle 2 \rangle 1$. ASSUME: a is a transitive set.

$\langle 2 \rangle 2$. $\bigcup (a^+) \subseteq a$

$\langle 3 \rangle 1$. LET: $x \in \bigcup (a^+)$

PROVE: $x \in a$

$\langle 3 \rangle 2$. PICK $y \in a^+$ such that $x \in y$.

$\langle 3 \rangle 3$. $y \in a$ or $y = a$.

$\langle 3 \rangle 4$. CASE: $y \in a$

PROOF: Then $x \in a$ because a is a transitive set.

$\langle 3 \rangle 5$. CASE: $y = a$

PROOF: Then $x \in a$ immediately.

$\langle 2 \rangle 3$. $a \subseteq \bigcup (a^+)$

PROOF: Since $a \in a^+$.

$\langle 1 \rangle 2$. If $\bigcup(a^+) = a$ then a is a transitive set.

$\langle 2 \rangle 1$. ASSUME: $\bigcup(a^+) = a$

$\langle 2 \rangle 2$. $\bigcup a \subseteq a$

PROOF:

$$\begin{aligned} \bigcup a &\subseteq \bigcup(a^+) && \text{(Proposition ??)} \\ &= a && (\langle 2 \rangle 1) \end{aligned}$$

$\langle 2 \rangle 3$. a is a transitive set.

PROOF: Proposition 1.5.2.

□

Proposition 6.0.14. *For any set a , we have a is a transitive set if and only if a^+ is a transitive set.*

PROOF:

$\langle 1 \rangle 1$. If a is a transitive set then a^+ is a transitive set.

PROOF: If a is a transitive set then $\bigcup(a^+) = a \subseteq a^+$ by Proposition 6.0.13 and so a^+ is a transitive set.

$\langle 1 \rangle 2$. If a^+ is a transitive set then a is a transitive set.

$\langle 2 \rangle 1$. ASSUME: a^+ is a transitive set.

$\langle 2 \rangle 2$. LET: $x \in y \in a$

$\langle 2 \rangle 3$. $x \in y \in a^+$

$\langle 2 \rangle 4$. $x \in a^+$

PROOF: $\langle 2 \rangle 1$

$\langle 2 \rangle 5$. $x \neq a$

PROOF: From $\langle 2 \rangle 2$ and the Axiom of Regularity.

$\langle 2 \rangle 6$. $x \in a$

□

Definition 6.0.15. We write 0 for \emptyset , 1 for \emptyset^+ , 2 for \emptyset^{++} , etc.

Proposition 6.0.16. *Let $2 = \{\emptyset, \{\emptyset\}\}$. For any set A we have $\mathcal{P}A \approx 2^A$.*

PROOF: The function $H : \mathcal{P}A \rightarrow 2^A$ defined by $H(S)(a) = \{\emptyset\}$ if $a \in S$ and \emptyset if $a \notin S$ is a bijection. □

Proposition 6.0.17. *For any ordinal number α we have α^+ is an ordinal number.*

PROOF:

$\langle 1 \rangle 1$. α^+ is a transitive set.

PROOF: Proposition 6.0.14.

$\langle 1 \rangle 2$. α^+ is well-ordered by \in .

$\langle 2 \rangle 1$. For all $x, y, z \in \alpha^+$, if $x \in y \in z$ then $x \in z$

$\langle 3 \rangle 1$. CASE: $z = \alpha$

PROOF: Then $x \in \alpha$ since α is a transitive set.

$\langle 3 \rangle 2$. CASE: $z \in \alpha$

PROOF: Then $x \in z$ since α is well-ordered by \in .

$\langle 2 \rangle 2$. For all $x, y \in \alpha^+$ we have $x \in y$ or $x = y$ or $y \in x$

- ⟨3⟩1. CASE: $x, y \in \alpha$
PROOF: The result follows because α is well-ordered by \in .
- ⟨3⟩2. CASE: $x \in \alpha, y = \alpha$
PROOF: Then $x \in y$.
- ⟨3⟩3. CASE: $x = \alpha, y \in \alpha$
PROOF: Then $y \in x$.
- ⟨3⟩4. CASE: $x = \alpha, y = \alpha$
PROOF: Then $x = y$.
- ⟨2⟩3. Every nonempty subset of α^+ has an \in -least element.
 - ⟨3⟩1. LET: $S \subseteq \alpha^+$ be nonempty
 - ⟨3⟩2. CASE: $S = \{\alpha\}$
PROOF: α is least in S .
 - ⟨3⟩3. CASE: $S \neq \{\alpha\}$
 - ⟨4⟩1. $S - \{\alpha\}$ is a nonempty subset of α
 - ⟨4⟩2. LET: β be least in $S - \{\alpha\}$
 - ⟨4⟩3. β is least in S .

□

Proposition 6.0.18. *If A is a set of ordinal numbers then $\bigcup A$ is an ordinal number.*

PROOF:

⟨1⟩1. $\bigcup A$ is a transitive set.

PROOF: Proposition 1.5.3.

⟨1⟩2. $\bigcup A$ is a set of ordinals.

□

Theorem 6.0.19 (Burali-Forti). *The class of ordinal numbers is a proper class.*

PROOF: If it is a set then it is a transitive set of ordinal numbers, hence an ordinal number, hence a member of itself, which is impossible. □

Theorem 6.0.20 (Hartogs). *For any set A , there exists an ordinal not dominated by A .*

PROOF:

⟨1⟩1. LET: α be the class of all ordinals β such that $\beta \preccurlyeq A$

PROVE: α is a set.

⟨1⟩2. LET: $W = \{(B, R) \mid B \subseteq A, R \text{ is a well ordering on } B\}$

⟨1⟩3. α is the class of the ordinals of the elements of W .

⟨2⟩1. For all $(B, R) \in W$, the ordinal of (B, R) is in α .

⟨3⟩1. LET: $(B, R) \in W$

⟨3⟩2. LET: β be the ordinal of (B, R)

⟨3⟩3. LET: $E : B \cong \beta$ be the canonical isomorphism.

⟨3⟩4. LET: $i : B \hookrightarrow A$ be the inclusion

⟨3⟩5. $i \circ E^{-1}$ is an injection $\beta \rightarrow A$

⟨3⟩6. $\beta \in \alpha$

⟨2⟩2. For all $\beta \in \alpha$, there exists $(B, R) \in W$ such that β is the ordinal number of (B, R) .

- ⟨3⟩1. LET: $\beta \in \alpha$
- ⟨3⟩2. PICK an injection $f : \beta \rightarrow A$
- ⟨3⟩3. Define \leq on $\text{ran } f$ by $f(x) \leq f(y)$ iff $x \leq y$
- ⟨3⟩4. $(\text{ran } f, \leq) \in W$
- ⟨3⟩5. β is the ordinal number of $(\text{ran } f, \leq)$
- ⟨1⟩4. α is a set.
- PROOF: By an Axiom of Replacement.
- ⟨1⟩5. α is an ordinal.
- PROOF: It is a transitive set of ordinals.
- ⟨1⟩6. $\alpha \not\subseteq A$
- PROOF: Since $\alpha \notin \alpha$.

□

Theorem 6.0.21 (Numeration Theorem). *Every set is equinumerous with some ordinal.*

PROOF:

- ⟨1⟩1. LET: A be any set.
- ⟨1⟩2. PICK an ordinal α not dominated by A .
- ⟨1⟩3. PICK a choice function G for A .
- ⟨1⟩4. PICK $e \notin A$
- ⟨1⟩5. LET: $F : \alpha \rightarrow A \cup \{e\}$ by transfinite recursion:

$$F(\gamma) = \begin{cases} G(A - F(\{\delta \mid \delta < \gamma\})) & \text{if } A - F(\{\delta \mid \delta < \gamma\}) \neq \emptyset \\ e & \text{if } A - F(\{\delta \mid \delta < \gamma\}) = \emptyset \end{cases}$$
- ⟨1⟩6. $e \in \text{ran } F$
 - ⟨2⟩1. ASSUME: for a contradiction $e \notin \text{ran } F$
 - ⟨2⟩2. F is an injection $\alpha \rightarrow A$.
 - ⟨3⟩1. LET: $\beta, \gamma \in \alpha$ with $\beta \neq \gamma$
 - PROVE: $F(\beta) \neq F(\gamma)$
 - ⟨3⟩2. ASSUME: w.l.o.g. $\beta < \gamma$
 - ⟨3⟩3. $F(\gamma) \in A - F(\{\delta \mid \delta < \gamma\})$
 - ⟨3⟩4. $F(\gamma) \notin F(\{\delta \mid \delta < \gamma\})$
 - ⟨3⟩5. $F(\gamma) \neq F(\beta)$
 - ⟨2⟩3. Q.E.D.
 - PROOF: This contradicts ⟨1⟩2.
- ⟨1⟩7. LET: δ be least such that $F(\delta) = e$
- ⟨1⟩8. $F \upharpoonright \delta : \delta \approx A$

Theorem 6.0.22 (Well-Ordering Theorem). *Any set can be well ordered.*

PROOF:

- ⟨1⟩1. PICK an ordinal δ and a bijection $F : A \approx \delta$
- ⟨1⟩2. Define \leq on A by $F(x) \leq F(y)$ iff $x \leq y$ for $x, y \in \delta$
- ⟨1⟩3. \leq is a well ordering on A .

□

Theorem 6.0.23 (Zorn's Lemma). *Let \mathcal{A} be a set such that, for every chain $\mathcal{B} \subseteq \mathcal{A}$, we have $\bigcup \mathcal{B} \in \mathcal{A}$. Then \mathcal{A} has a maximal element.*

PROOF:

$\langle 1 \rangle 1$. PICK a well ordering $<$ on \mathcal{A} .

$\langle 1 \rangle 2$. LET: $F : \mathcal{A} \rightarrow 2$ be the function defined by transfinite recursion by:

$$F(A) = \begin{cases} 1 & \text{if } A \text{ includes every set } B < A \text{ for which } F(B) = 1 \\ 0 & \text{otherwise} \end{cases}$$

$\langle 1 \rangle 3$. LET: $\mathcal{C} = \{A \in \mathcal{A} \mid F(A) = 1\}$

PROVE: $\bigcup \mathcal{C}$ is a maximal element of \mathcal{A}

$\langle 1 \rangle 4$. For all $A \in \mathcal{A}$, we have $A \in \mathcal{C}$ iff $\forall B < A. B \in \mathcal{C} \Rightarrow B \subseteq A$

$\langle 1 \rangle 5$. \mathcal{C} is a chain.

$\langle 2 \rangle 1$. LET: $A, A' \in \mathcal{C}$

$\langle 2 \rangle 2$. ASSUME: w.l.o.g. $A \leq A'$

$\langle 2 \rangle 3$. $A \subseteq A'$

PROOF: By $\langle 1 \rangle 4$

$\langle 1 \rangle 6$. $\bigcup \mathcal{C} \in \mathcal{A}$

$\langle 1 \rangle 7$. $\bigcup \mathcal{C}$ is maximal in \mathcal{A} .

$\langle 2 \rangle 1$. LET: $A \in \mathcal{A}$ and $\bigcup \mathcal{C} \subseteq A$

$\langle 2 \rangle 2$. $A \in \mathcal{C}$

PROOF: By $\langle 1 \rangle 4$ since $\forall B \in \mathcal{C}. B \subseteq A$.

$\langle 2 \rangle 3$. $A \subseteq \bigcup \mathcal{C}$

$\langle 2 \rangle 4$. $A = \bigcup \mathcal{C}$

□

Proposition 6.0.24 (Teichmüller-Tukey Lemma). *Let \mathcal{A} be a nonempty set such that, for every B , we have $B \in \mathcal{A}$ if and only if every finite subset of B is a member of \mathcal{A} . Then \mathcal{A} has a maximal element.*

PROOF:

$\langle 1 \rangle 1$. For every chain $\mathcal{B} \subseteq \mathcal{A}$, we have $\bigcup \mathcal{B} \in \mathcal{A}$

$\langle 2 \rangle 1$. LET: $\mathcal{B} \subseteq \mathcal{A}$ be a chain.

$\langle 2 \rangle 2$. Every finite subset of $\bigcup \mathcal{B}$ is a member of \mathcal{A} .

$\langle 3 \rangle 1$. LET: C be a finite subset of $\bigcup \mathcal{B}$.

$\langle 3 \rangle 2$. PICK $B \in \mathcal{B}$ such that $C \subseteq B$.

$\langle 3 \rangle 3$. $B \in \mathcal{A}$

$\langle 3 \rangle 4$. Every finite subset of B is in \mathcal{A} .

$\langle 3 \rangle 5$. $C \in \mathcal{A}$

$\langle 2 \rangle 3$. $\bigcup \mathcal{B} \in \mathcal{A}$.

$\langle 1 \rangle 2$. Q.E.D.

PROOF: Zorn's lemma.

Chapter 7

Cardinal Numbers

7.1 Cardinal Numbers

Definition 7.1.1 (Cardinality). For any set A , the *cardinality* $|A|$ of A is the least ordinal equinumerous with A .

Proposition 7.1.2. For any sets A and B , we have $A \approx B$ iff $|A| = |B|$.

PROOF: Easy. \square

Definition 7.1.3 (Addition). Given cardinal numbers κ and λ , we define $\kappa + \lambda$ to be $|A \cup B|$ where A and B are disjoint sets of cardinality κ and λ respectively.

We prove this is well-defined.

PROOF:

$\langle 1 \rangle 1$. ASSUME: $A \approx A'$, $B \approx B'$, and $A \cap B = A' \cap B' = \emptyset$

$\langle 1 \rangle 2$. PICK bijections $f : A \approx A'$ and $g : B \approx B'$

$\langle 1 \rangle 3$. The function $A \cup B \rightarrow A' \cup B'$ that maps $a \in A$ to $f(a)$ and $b \in B$ to $g(b)$ is a bijection.

\square

Proposition 7.1.4. For any cardinal number κ , we have $\kappa + 0 = \kappa$.

PROOF: Let A and B be disjoint sets of cardinality κ and 0 . Then $B = \emptyset$ so $A \cup B = A$ and so $|A \cup B| = \kappa$. \square

Theorem 7.1.5 (Associative Law for Addition). For any cardinal numbers κ , λ , μ we have $\kappa + (\lambda + \mu) = (\kappa + \lambda) + \mu$.

PROOF: Since $A \cup (B \cup C) = (A \cup B) \cup C$. \square

Proposition 7.1.6. For any cardinal numbers κ and λ we have $\kappa + \lambda = \lambda + \kappa$.

PROOF: Since $A \cup B = B \cup A$. \square

Definition 7.1.7 (Multiplication). For κ and λ cardinal numbers, we define $\kappa\lambda$ to be the cardinal number of $A \times B$, where $|A| = \kappa$ and $|B| = \lambda$.

We prove this is well-defined.

PROOF: If $f : A \approx A'$ and $g : B \approx B'$ then the function that maps (a, b) to $(f(a), g(b))$ is a bijection $A \times B \approx A' \times B'$. \square

Proposition 7.1.8. For any cardinal number κ we have $\kappa \cdot 0 = 0$.

PROOF: Since $A \times \emptyset = \emptyset$. \square

Proposition 7.1.9. For any cardinal number κ we have $\kappa \cdot 1 = \kappa$.

PROOF: The function that maps (a, e) to a is a bijection $A \times \{e\} \approx A$. \square

Theorem 7.1.10 (Distributive Law). For any cardinal numbers κ , λ and μ , we have $\kappa(\lambda + \mu) = \kappa\lambda + \kappa\mu$.

PROOF: Since $A \times (B \cup C) = (A \times B) \cup (A \times C)$. \square

Theorem 7.1.11 (Associative Law for Multiplication). For any cardinal numbers κ , λ and μ , we have $\kappa(\lambda\mu) = (\kappa\lambda)\mu$.

PROOF: Since $A \times (B \times C) \approx (A \times B) \times C$. \square

Theorem 7.1.12 (Commutative Law for Multiplication). For any cardinal numbers κ and λ , we have $\kappa\lambda = \lambda\kappa$.

PROOF: Since $A \times B \approx B \times A$. \square

Theorem 7.1.13. For any cardinal numbers κ and λ , if $\kappa\lambda = 0$ then $\kappa = 0$ or $\lambda = 0$.

PROOF: if $A \times B = \emptyset$ then $A = \emptyset$ or $B = \emptyset$. \square

Definition 7.1.14 (Exponentiation). Given cardinal numbers κ and λ , we define κ^λ to be $|A^B|$, where $|A| = \kappa$ and $|B| = \lambda$.

We prove this is well-defined.

PROOF: If $f : A \approx A'$ and $g : B \approx B'$, then the function that maps $h : B \rightarrow A$ to $f \circ h \circ g^{-1}$ is a bijection $A^B \approx A'^{B'}$. \square

Proposition 7.1.15. For any cardinal numbers κ , λ and μ ,

$$\kappa^{\lambda+\mu} = (\kappa^\lambda)^\mu$$

PROOF: The function that maps $f : A \times B \rightarrow C$ to $\lambda a \in A. \lambda b \in B. f(a, b)$ is a bijection $A^{B \times C} \approx (A^B)^C$. \square

Proposition 7.1.16. For any cardinal numbers κ , λ and μ ,

$$(\kappa\lambda)^\mu = \kappa^\mu \lambda^\mu.$$

PROOF: The function $f : A^C \times B^C \rightarrow (A \times B)^C$ with $f(g, h)(c) = (g(c), h(c))$ is a bijection. \square

Proposition 7.1.17. *For any cardinal numbers κ , λ and μ , we have*

$$\kappa^{\lambda+\mu} = \kappa^\lambda \kappa^\mu .$$

PROOF: If $B \cap C = \emptyset$, then $f : A^B \times A^C \rightarrow A^{B \cup C}$ given by $f(g, h)(b) = g(b)$ and $f(g, h)(c) = h(c)$ is a bijection. \square

Proposition 7.1.18. *For any cardinal number κ , we have $\kappa^0 = 1$.*

PROOF: For any set A , we have $A^\emptyset = \{\emptyset\}$. \square

Proposition 7.1.19. *For any cardinal number κ , we have $\kappa^1 = \kappa$.*

PROOF: For any sets A and B , if $B = \{b\}$ then the function $f : A \rightarrow A^B$ with $f(a)(b) = a$ is a bijection. \square

Proposition 7.1.20. *For any non-zero cardinal number κ we have $0^\kappa = 0$.*

PROOF: If A is nonempty then there is no function $A \rightarrow \emptyset$. \square

Proposition 7.1.21. *For any set A we have $|\mathcal{P}A| = 2^{|A|}$.*

PROOF: The function $f : \mathcal{P}A \rightarrow 2^A$ where $f(X)(a) = 0$ if $a \notin X$ and $f(X)(a) = 1$ if $a \in X$. \square

Corollary 7.1.21.1. *For any cardinal number κ we have $2^\kappa \neq \kappa$.*

PROOF: By Cantor's Theorem. \square

7.2 Ordering on Cardinal Numbers

Definition 7.2.1 (Domination). A set A is *dominated* by a set B , $A \preceq B$, iff there exists an injection $A \rightarrow B$.

Definition 7.2.2. Given cardinal numbers κ and λ , we write $\kappa \leq \lambda$ iff $A \preceq B$ where $|A| = \kappa$ and $|B| = \lambda$. We write $\kappa < \lambda$ iff $\kappa \leq \lambda$ and $\kappa \neq \lambda$.

We prove this is well-defined.

PROOF: If $f : A \approx A'$, $g : B \approx B'$, and $h : A \rightarrow B$ is an injection, then $g \circ h \circ f^{-1}$ is an injection $A' \rightarrow B'$. \square

Proposition 7.2.3. *For any cardinal number κ we have $\kappa \leq \kappa$.*

PROOF: For any set A we have id_A is an injection $A \rightarrow A$. \square

Proposition 7.2.4. *For any cardinal numbers κ , λ and μ , if $\kappa \leq \lambda$ and $\lambda \leq \mu$ then $\kappa \leq \mu$.*

PROOF: If $f : A \rightarrow B$ and $g : B \rightarrow C$ are injective then so is $g \circ f : A \rightarrow C$. \square

Proposition 7.2.5. *For any cardinal number κ we have $0 \leq \kappa$.*

PROOF: For any set A , we have \emptyset is an injection $\emptyset \rightarrow A$. \square

Proposition 7.2.6. *For any cardinal number κ we have $\kappa < 2^\kappa$.*

PROOF: The function that maps a to $\{a\}$ is an injection $A \rightarrow \mathcal{P}A$, so $\kappa \leq 2^\kappa$. They are unequal by Cantor's Theorem. \square

Corollary 7.2.6.1. *There is no largest cardinal number.*

Proposition 7.2.7. *For any cardinal numbers κ, λ, μ , if $\kappa \leq \lambda$ then $\kappa + \mu \leq \lambda + \mu$.*

PROOF: If $f : A \rightarrow B$ is injective, and $A \cap C = B \cap C = \emptyset$, then the function $A \cup C \rightarrow B \cup C$ that maps a to $f(a)$ and maps c to c is an injection. \square

Proposition 7.2.8. *For any cardinal numbers κ, λ, μ , if $\kappa \leq \lambda$ then $\kappa\mu \leq \lambda\mu$.*

PROOF: If $f : A \rightarrow B$ is injective, then the function $A \times C \rightarrow B \times C$ that maps (a, c) to $(f(a), c)$ is injective. \square

Proposition 7.2.9. *For any cardinal numbers κ, λ, μ , if $\kappa \leq \lambda$ then $\kappa^\mu \leq \lambda^\mu$.*

PROOF: Given an injection $f : A \rightarrow B$, the function that maps $A^C \rightarrow B^C$ that maps g to $f \circ g$ is an injection. \square

Proposition 7.2.10. *For any cardinal numbers κ, λ, μ , if $\kappa \leq \lambda$ and μ and κ are not both 0, then $\mu^\kappa \leq \mu^\lambda$.*

PROOF:

$\langle 1 \rangle 1$. LET: A, B and C be sets with A and C not both empty.

$\langle 1 \rangle 2$. LET: $f : A \rightarrow B$ be an injection.

PROVE: $C^A \preccurlyeq C^B$

$\langle 1 \rangle 3$. CASE: $C = \emptyset$

PROOF: Then $A \neq \emptyset$ so $C^A = \emptyset \preccurlyeq C^B$.

$\langle 1 \rangle 4$. CASE: $C \neq \emptyset$

$\langle 2 \rangle 1$. PICK $c \in C$

$\langle 2 \rangle 2$. LET: $g : C^A \rightarrow C^B$ be the function $g(h)(f(a)) = h(a)$, $g(h)(b) = c$ if $b \notin f(A)$

$\langle 2 \rangle 3$. g is an injection.

\square

Proposition 7.2.11. *Let \mathcal{A} be a set such that $\forall X \in \mathcal{A}. |X| \leq \kappa$. Then*

$$|\bigcup \mathcal{A}| \leq |\mathcal{A}|^\kappa.$$

PROOF:

$\langle 1 \rangle 1$. For $X \in \mathcal{A}$, choose a surjection $f_X : \kappa \rightarrow X$.

$\langle 1 \rangle 2$. Define $g : \mathcal{A} \times \kappa \rightarrow \bigcup \mathcal{A}$ by $g(X, \alpha) = f_X(\alpha)$

$\langle 1 \rangle 3$. g is surjective.

\square

Chapter 8

Natural Numbers

8.1 Inductive Sets

Definition 8.1.1 (Inductive). A set I is *inductive* iff $\emptyset \in I$ and $\forall x \in I. x^+ \in I$.

Definition 8.1.2 (Natural Number). A *natural number* is a set that belongs to every inductive set.

Theorem 8.1.3. *The class \mathbb{N} of natural numbers is a set.*

PROOF:

$\langle 1 \rangle 1$. PICK an inductive set I .

PROOF: Axiom of Infinity.

$\langle 1 \rangle 2$. $\mathbb{N} \subseteq I$

□

Theorem 8.1.4. *\mathbb{N} is inductive, and is a subset of every other inductive set.*

PROOF:

$\langle 1 \rangle 1$. \mathbb{N} is inductive.

$\langle 2 \rangle 1$. $0 \in \mathbb{N}$

PROOF: Since 0 is a member of every inductive set.

$\langle 2 \rangle 2$. $\forall n \in \mathbb{N}. n^+ \in \mathbb{N}$

$\langle 3 \rangle 1$. LET: $n \in \mathbb{N}$

$\langle 3 \rangle 2$. LET: I be any inductive set.

PROVE: $n^+ \in I$

$\langle 3 \rangle 3$. $n \in I$

PROOF: $\langle 3 \rangle 1$, $\langle 3 \rangle 2$

$\langle 3 \rangle 4$. $n^+ \in I$

PROOF: $\langle 3 \rangle 2$, $\langle 3 \rangle 3$

$\langle 1 \rangle 2$. \mathbb{N} is a subset of every inductive set.

PROOF: Immediate from definitions.

□

Corollary 8.1.4.1 (Induction Principle for \mathbb{N}). *Any inductive subset of \mathbb{N} coincides with \mathbb{N} .*

Theorem 8.1.5. *Every natural number except 0 is the successor of some natural number.*

PROOF: Trivially by induction. \square

Proposition 8.1.6. *Every natural number is a transitive set.*

PROOF:

$\langle 1 \rangle 1$. 0 is a transitive set.

PROOF: Vacuously, if $x \in y \in 0$ then $x \in 0$.

$\langle 1 \rangle 2$. For every natural number n , if n is a transitive set then n^+ is a transitive set.

PROOF: Proposition 6.0.14.

\square

Proposition 8.1.7. *For natural numbers m and n , if $m^+ = n^+$ then $m = n$.*

PROOF: If $m^+ = n^+$ then

$$m = \bigcup (m^+) \quad (\text{Proposition 6.0.13})$$

$$= \bigcup (n^+)$$

$$= n \quad (\text{Proposition 6.0.13})$$

Proposition 8.1.8. *\mathbb{N} is a transitive set.*

PROOF:

$\langle 1 \rangle 1$. $0 \subseteq \mathbb{N}$

$\langle 1 \rangle 2$. $\forall n \in \mathbb{N}. n \subseteq \mathbb{N} \Rightarrow n^+ \subseteq \mathbb{N}$

$\langle 1 \rangle 3$. $\forall n \in \mathbb{N}. n \subseteq \mathbb{N}$

PROOF: From $\langle 1 \rangle 1$ and $\langle 1 \rangle 2$ by induction.

\square

Proposition 8.1.9 (Dependent Choice). *Let A be a nonempty set and R a relation on A such that $\forall x \in A. \exists y \in A. (y, x) \in R$. Then there exists a function $f : \mathbb{N} \rightarrow A$ such that $\forall n \in \mathbb{N}. (f(n+1), f(n)) \in R$.*

PROOF:

$\langle 1 \rangle 1$. PICK a choice function F for A .

$\langle 1 \rangle 2$. PICK $a \in A$

$\langle 1 \rangle 3$. Define $f : \mathbb{N} \rightarrow A$ by $f(0) = a$ and $f(n+1) = F(\{y \in A \mid (y, f(n)) \in R\})$.

\square

8.2 Ordering on \mathbb{N}

Proposition 8.2.1. *For any natural numbers m and n , we have $m < n$ if and only if $m^+ < n^+$.*

PROOF:

- $\langle 1 \rangle 1$. For any natural numbers m and n , if $m < n$ then $m^+ < n^+$.
- $\langle 2 \rangle 1$. For any natural number m , if $m < 0$ then $m^+ < 0^+$
 PROOF: Vacuous.
- $\langle 2 \rangle 2$. For any natural number n , if $\forall m < n. m^+ < n^+$ then $\forall m < n^+. m^+ < n^{++}$
 - $\langle 3 \rangle 1$. LET: $m < n^+$
 - $\langle 3 \rangle 2$. $m < n$ or $m = n$
 - $\langle 3 \rangle 3$. CASE: $m < n$
 - $\langle 4 \rangle 1$. $m^+ < n^+$
 PROOF: Induction hypothesis.
 - $\langle 4 \rangle 2$. $m^+ < n^{++}$
 - $\langle 3 \rangle 4$. CASE: $m = n$
 PROOF: $m^+ = n^+ < n^{++}$.
- $\langle 1 \rangle 2$. For any natural numbers m and n , if $m^+ < n^+$ then $m < n$.
 - $\langle 2 \rangle 1$. We never have $m^+ < 0^+$.
 - $\langle 3 \rangle 1$. $m^+ \not< 0$
 - $\langle 3 \rangle 2$. $m^+ \neq 0$
 - $\langle 3 \rangle 3$. $m^+ \not< 0^+$
 - $\langle 2 \rangle 2$. For any natural number n , if $\forall m. m^+ < n^+ \Rightarrow m < n$, then $\forall m. m^+ < n^{++} \Rightarrow m < n^+$.
 - $\langle 3 \rangle 1$. LET: n be a natural number.
 - $\langle 3 \rangle 2$. ASSUME: $\forall m. m^+ < n^+ \Rightarrow m < n$
 - $\langle 3 \rangle 3$. LET: m be a natural number.
 - $\langle 3 \rangle 4$. ASSUME: $m^+ < n^{++}$
 - $\langle 3 \rangle 5$. $m^+ < n^+$ or $m^+ = n^+$
 - $\langle 3 \rangle 6$. CASE: $m^+ < n^+$
 - $\langle 4 \rangle 1$. $m < n$
 PROOF: Induction hypothesis.
 - $\langle 4 \rangle 2$. $m < n^+$
 - $\langle 3 \rangle 7$. CASE: $m^+ = n^+$
 PROOF: $m = n < n^+$ by Proposition 8.1.7.

□

Corollary 8.2.1.1. *For natural numbers m and n , we have $m \leq n$ if and only if $m \subseteq n$.*

PROOF:

- $\langle 1 \rangle 1$. If $m \leq n$ then $m \subseteq n$
 - $\langle 2 \rangle 1$. ASSUME: $m \leq n$
 - $\langle 2 \rangle 2$. LET: $p \in m$
 - $\langle 2 \rangle 3$. CASE: $m < n$
 PROOF: Then $p \in n$ by Proposition 8.1.6.
 - $\langle 2 \rangle 4$. CASE: $m = n$
 PROOF: Then $p \in n$ immediately.
- $\langle 1 \rangle 2$. If $m \subseteq n$ then $m \leq n$
 - $\langle 2 \rangle 1$. ASSUME: $m \subseteq n$

⟨2⟩2. $n \not\leq m$

PROOF: If $n < m$ then $n \in n$ contradicting the Axiom of Regularity.

⟨2⟩3. $m \leq n$

PROOF: By trichotomy.

□

8.3 Recursion

Theorem 8.3.1. *Let $<$ be a linear ordering on A . Then $<$ is a well ordering on A if and only if there does not exist a function $f : \mathbb{N} \rightarrow A$ such that $\forall n \in \mathbb{N}. f(n+1) < f(n)$.*

PROOF:

⟨1⟩1. If there exists a function $f : \mathbb{N} \rightarrow A$ such that $\forall n \in \mathbb{N}. f(n+1) < f(n)$ then $<$ is not a well ordering on A .

PROOF: $\text{ran } f$ is a nonempty subset of A with no least element.

⟨1⟩2. If $<$ is not a well ordering on A then there exists a function $f : \mathbb{N} \rightarrow A$ such that $\forall n \in \mathbb{N}. f(n+1) < f(n)$.

⟨2⟩1. ASSUME: $<$ is not a well ordering on A .

⟨2⟩2. PICK a nonempty subset $B \subseteq A$ that has no least element.

⟨2⟩3. $\forall x \in B. \exists y \in B. y < x$

⟨2⟩4. Choose a function $g : B \rightarrow B$ such that $\forall x \in B. g(x) < x$

⟨2⟩5. PICK $b \in B$

⟨2⟩6. Define $f : \mathbb{N} \rightarrow A$ recursively by $f(0) = b$ and $\forall n \in \mathbb{N}. f(n+1) = g(f(n))$

⟨2⟩7. $\forall n \in \mathbb{N}. f(n+1) < f(n)$

□

8.4 Cardinality

Theorem 8.4.1 (Schröder-Bernstein). *For any cardinal numbers κ and λ , if $\kappa \leq \lambda$ and $\lambda \leq \kappa$ then $\kappa = \lambda$.*

PROOF:

⟨1⟩1. LET: $f : A \rightarrow B$ and $g : B \rightarrow A$ be injections.

PROVE: $A \approx B$

⟨1⟩2. Define the sets C_n for $n \in \mathbb{N}$ by recursion:

$$C_0 := A - \text{ran } g$$

$$C_{n+1} := g(f(C_n))$$

⟨1⟩3. LET: $h : A \rightarrow B$ be the function

$$h(x) = \begin{cases} f(x) & \text{if } \exists n. x \in C_n \\ g^{-1}(x) & \text{otherwise} \end{cases}$$

⟨1⟩4. For $n \in \mathbb{N}$,

LET: $D_n = f(C_n)$

⟨1⟩5. h is injective.

- ⟨2⟩1. LET: $x, x' \in A$
- ⟨2⟩2. ASSUME: $h(x) = h(x')$
- ⟨2⟩3. CASE: $x \in C_m$ and $x' \in C_n$
 PROOF: We have $f(x) = f(x')$ so $x = x'$.
- ⟨2⟩4. CASE: $x \in C_m$ and $\forall n. x' \notin C_n$
 PROOF: We have $f(x) = g^{-1}(x')$ so $x' = g(f(x)) \in C_{m+1}$ which is a contradiction.
- ⟨2⟩5. CASE: $\forall n. x \notin C_n$ and $x' \in C_n$
 PROOF: Similar.
- ⟨2⟩6. CASE: $\forall n. x \notin C_n$ and $\forall n. x' \notin C_n$
 PROOF: We have $g^{-1}(x) = g^{-1}(x')$ so $x = x'$.
- ⟨1⟩6. h is surjective.
- ⟨2⟩1. LET: $y \in B$
- ⟨2⟩2. CASE: $y \in D_n$

PROOF: Proposition 5.1.29. □

Corollary 8.6.8.2. For natural numbers m , n and p , if $mp = np$ and $p \neq 0$ then $m = n$.

PROOF: By trichotomy. □

Proposition 8.6.9. Let m , n , p , q be natural numbers. Assume $m + n = p + q$. Then $m < p$ if and only if $q < n$.

PROOF:

$\langle 1 \rangle 1$. If $m < p$ then $q < n$.

PROOF: If $m < p$ and $n \leq q$ then $m + n < p + q$.

$\langle 1 \rangle 2$. If $q < n$ then $m < p$.

PROOF: Similar.

□

Proposition 8.6.10. *Let m, n, p and q be natural numbers. Assume $n < m$ and $q < p$. Then*

$$mq + np < mp + nq .$$

PROOF:

⟨1⟩1. PICK positive natural numbers a and b such that $m = n + a$ and $p = q + b$.

⟨1⟩2. $mp + nq > mq + np$

PROOF:

$$\begin{aligned} mp + nq &= (n + a)(q + b) + nq \\ &= 2nq + nb + aq + ab \\ mq + np &= (n + a)q + n(q + b) \\ &= 2nq + aq + nb \\ \therefore mp + nq &= mq + np + ab \\ &> mq + np \end{aligned}$$

□

8.7 Sequences

Definition 8.7.1 (Sequence). Let A be a set. A *finite sequence* in A is a function $a : n \rightarrow A$ for some natural number n ; we write it as $(a(0), a(1), \dots, a(n - 1))$. An *(infinite) sequence* in A is a function $\mathbb{N} \rightarrow A$.

We write A^* for the set of all finite sequences in A .

Proposition 8.7.2. *If A is countable then A^* is countable.*

PROOF: For any n , the set A^n is countable, and A^* is equinumerous with $\bigcup_n A^n$.

□

Chapter 9

Group Theory

9.1 Groups

Definition 9.1.1 (Group). A *group* G consists of a set G and a function $\cdot : G^2 \rightarrow G$ such that:

1. \cdot is associative
2. There exists $e \in G$ such that $\forall x \in G. xe = x$ and $\forall x \in G. \exists y \in G. xy = e$.

Proposition 9.1.2. *The inverse of an element in a group is unique.*

PROOF:

$\langle 1 \rangle$ 1. ASSUME: b and b' are inverses of a .

$\langle 1 \rangle$ 2. $b = b'$

PROOF:

$$\begin{aligned} b &= be \\ &= bab' \\ &= eb' \\ &= b' \end{aligned}$$

□

Definition 9.1.3. We write x^{-1} for the inverse of x .

Proposition 9.1.4. *In any group, if $ab = ac$ then $b = c$.*

PROOF:

$$\begin{aligned} b &= eb \\ &= a^{-1}ab \\ &= a^{-1}ac \\ &= ec \\ &= c \end{aligned}$$

□

9.2 Abelian Groups

Definition 9.2.1 (Abelian group). An *Abelian group* is a group whose multiplication is commutative.

We may say we are writing an Abelian group *additively*, meaning we write $a + b$ for ab , 0 for e and $-a$ for a^{-1} . In this case we write $a - b$ for ab^{-1} .

Chapter 10

Ring Theory

10.1 Rings

Definition 10.1.1 (Commutative Ring). A *commutative ring* consists of a set R and two binary operations $+$, \cdot on R such that:

- D is an Abelian group under $+$. Let us write 0 for its identity element.
- \cdot is commutative and associative, and distributes over $+$.
- \cdot has an identity element 1 that is different from 0 .

Proposition 10.1.2. *In any commutative ring, $0x = 0$.*

PROOF:

$$\begin{aligned}(0 + 0)x &= 0x \\ \therefore 0x + 0x &= 0x + 0 \\ \therefore 0x &= 0 && \text{(Proposition 9.1.4)} \square\end{aligned}$$

Proposition 10.1.3. *In any commutative ring, $(-a)b = -(ab)$.*

PROOF:

$$\begin{aligned}ab + (-a)b &= (a + (-a))b \\ &= 0b \\ &= 0 && \text{(Proposition 10.1.2)} \square\end{aligned}$$

10.2 Ordered Rings

Definition 10.2.1 (Ordered Commutative Ring). An *ordered commutative ring* consists of a commutative ring R with a linear order $<$ on R such that:

- for all $x, y, z \in R$, we have $x < y$ if and only if $x + z < y + z$.

- for all $x, y, z \in R$, if $0 < z$ then we have $x < y$ if and only if $xz < yz$.

Proposition 10.2.2. *In any ordered commutative ring, $0 < 1$.*

PROOF: If $1 < 0$ then we have $0 < -1$ and so $0 < (-1)(-1) = 1$, which is a contradiction. \square

Proposition 10.2.3. *The ordering on an ordered commutative ring is dense; that is, if $x < y$ then there exists z such that $x < z < y$.*

PROOF: Take $z = (x + y)/2$. \square

10.3 Integral Domains

Definition 10.3.1 (Integral Domain). An *integral domain* is a commutative ring such that, for all $a, b \in D$, if $ab = 0$ then $a = 0$ or $b = 0$.

Proposition 10.3.2. *In any integral domain, if $ab = ac$ and $a \neq 0$ then $b = c$.*

PROOF: We have $a(b - c) = 0$ and $a \neq 0$ so $b - c = 0$ hence $b = c$. \square

Definition 10.3.3 (Ordered Integral Domain). An *ordered integral domain* is an ordered commutative ring that is an integral domain.

Chapter 11

Field Theory

11.1 Fields

Definition 11.1.1 (Field). A *field* F is a commutative ring such that $0 \neq 1$ and, for all $x \in F$, if $x \neq 0$ then there exists $y \in F$ such that $xy = 1$.

Proposition 11.1.2. *Every field is an integral domain.*

PROOF: If $ab = 0$ and $a \neq 0$ then $b = a^{-1}ab = 0$. \square

Proposition 11.1.3. *In any field F , we have $F - \{0\}$ is an Abelian group under multiplication.*

PROOF: Immediate from the definition. \square

Definition 11.1.4 (Field of Fractions). Let D be an integral domain. The *field of fractions* of D is the quotient set $F = (D \times (D - \{0\})) / \sim$ where

$$(a, b) \sim (c, d) \Leftrightarrow ad = bc$$

under

$$\begin{aligned} [(a, b)] + [(c, d)] &= [(ad + bc, bd)] \\ [(a, b)][(c, d)] &= [(ac, bd)] \end{aligned}$$

We prove this is a field.

PROOF:

$\langle 1 \rangle 1.$ \sim is an equivalence relation on $D \times (D - \{0\})$.

PROOF:

$\langle 2 \rangle 1.$ \sim is reflexive.

PROOF: We always have $ab = ba$.

$\langle 2 \rangle 2.$ \sim is symmetric.

PROOF: If $ad = bc$ then $cb = da$.

$\langle 2 \rangle 3$. \sim is transitive.

$\langle 3 \rangle 1$. ASSUME: $(a, b) \sim (c, d) \sim (e, f)$

$\langle 3 \rangle 2$. $ad = bc$ and $cf = de$

$\langle 3 \rangle 3$. $adf = bde$

PROOF: $adf = bcf = bde$

$\langle 3 \rangle 4$. $af = be$

PROOF: Proposition 10.3.2.

□

$\langle 1 \rangle 2$. Addition is well-defined.

PROOF:

$\langle 2 \rangle 1$. If $b \neq 0$ and $d \neq 0$ then $bd \neq 0$.

PROOF: Since D is an integral domain.

$\langle 2 \rangle 2$. If $ab' = a'b$ and $cd' = c'd$ then $(ad + bc)b'd' = (a'd' + b'c')bd$.

PROOF:

$$\begin{aligned} (ad + bc)b'd' &= ab'dd' + bb'cd' \\ &= a'bdd' + bb'c'd \\ &= (a'd' + b'c')bd \end{aligned}$$

□

$\langle 1 \rangle 3$. Multiplication is well-defined.

PROOF:

$\langle 2 \rangle 1$. If $b \neq 0$ and $d \neq 0$ then $bd \neq 0$.

PROOF: Since D is an integral domain.

$\langle 2 \rangle 2$. If $[(a, b)] = [(a', b')]$ and $[(c, d)] = [(c', d')]$ then $[(ac, bd)] = [(a'c', b'd')]$.

PROOF: If $ab' = a'b$ and $cd' = c'd$ then $acb'd' = a'c'bd$.

□

$\langle 1 \rangle 4$. Addition is commutative.

PROOF: $[(a, b)] + [(c, d)] = [(ad + bc, bd)] = [(cb + da, db)] = [(c, d)] + [(a, b)]$ □

$\langle 1 \rangle 5$. Addition is associative.

PROOF:

$$\begin{aligned} [(a, b)] + ([[(c, d)] + [(e, f)]] &= [(a, b)] + [(cf + de, df)] \\ &= [(adf + bcf + bde, bdf)] \\ &= [(ad + bc, bd)] + [(e, f)] \\ &= ([[(a, b)] + [(c, d)]] + [(e, f)]) \quad \square \end{aligned}$$

$\langle 1 \rangle 6$. For any $x \in F$ we have $x + [(0, 1)] = x$

PROOF: $[(a, b)] + [(0, 1)] = [(a \cdot 1 + b \cdot 0, b \cdot 1)] = [(a, b)]$ □

$\langle 1 \rangle 7$. For any $x \in F$, there exists $y \in F$ such that $x + y = [(0, 1)]$.

PROOF: $[(a, b)] + [(-a, b)] = [(ab - ab, b^2)] = [(0, b^2)] = [(0, 1)]$ □

$\langle 1 \rangle 8$. Multiplication is commutative.

PROOF: $[(a, b)][(c, d)] = [(c, d)][(a, b)] = [(ac, bd)]$. □

$\langle 1 \rangle 9$. Multiplication is associative.

PROOF: $[(a, b)]([[(c, d)][(e, f)]]) = ([[(a, b)][(c, d)]])([e, f]) = [(ace, bdf)]$. □

$\langle 1 \rangle 10$. For any $x \in F$ we have $x[(1, 1)] = x$

PROOF: $[(a, b)][(1, 1)] = [(a, b)]$ □

$\langle 1 \rangle 11$. For any non-zero $x \in F$, there exists $y \in F$ such that $xy = [(1, 1)]$.

PROOF:

- $\langle 2 \rangle 1$. LET: $[(a, b)] \in \mathbb{Q}$
- $\langle 2 \rangle 2$. ASSUME: $[(a, b)] \neq [(0, 1)]$
- $\langle 2 \rangle 3$. $a \neq 0$
- $\langle 2 \rangle 4$. $[(a, b)][(b, a)] = [(1, 1)]$

□

□

Definition 11.1.5. For any field F , let $N(F)$ be the intersection of all the subsets $S \subseteq F$ such that $1 \in S$ and $\forall x \in S. x + 1 \in S$.

Definition 11.1.6 (Characteristic Zero). A field F has *characteristic 0* iff $0 \notin N(F)$.

Proposition 11.1.7. In a field F with characteristic 0, the function $n : \mathbb{N} \rightarrow N(F)$ defined by

$$\begin{aligned} n(0) &= 1 \\ n(x + 1) &= n(x) + 1 \end{aligned}$$

is a bijection.

PROOF:

- $\langle 1 \rangle 1$. n is injective.
- $\langle 2 \rangle 1$. ASSUME: for a contradiction $n(i) = n(j)$ with $i \neq j$
- $\langle 2 \rangle 2$. ASSUME: w.l.o.g. $i < j$
- $\langle 2 \rangle 3$. $n(j - i) = 0$
- $\langle 2 \rangle 4$. Q.E.D.

PROOF: This contradicts the fact that F has characteristic 0.

- $\langle 1 \rangle 2$. n is surjective.

PROOF: Since $\text{ran } n$ is a subset of F that includes 1 and is closed under $+1$.

□

Definition 11.1.8. In any field F , let

$$I(F) = N(F) \cup \{0\} \cup \{-x \mid x \in N(F)\}$$

Definition 11.1.9. In any field F , let

$$Q(F) = \{x/y \mid x, y \in I(F), y \neq 0\}$$

Proposition 11.1.10. $Q(F)$ is the smallest subfield of F .

PROOF: $Q(F)$ is closed under $+$ and \cdot , and any subset of F closed under $+$ and \cdot that contains 0 and 1 must include $Q(F)$. □

Theorem 11.1.11. Let F and G be fields of characteristic 0. Then there exists a unique field isomorphism between $Q(F)$ and $Q(G)$.

PROOF:

- (1)1. LET: $\phi : N(F) \rightarrow N(G)$ be the unique function such that $\phi(1) = 1$ and $\forall x \in N(F). \phi(x+1) = \phi(x) + 1$.
- (1)2. ϕ is a bijection.
 PROOF: Similar to Proposition 11.1.7.
- (1)3. $\forall x, y \in N(F). \phi(x+y) = \phi(x) + \phi(y)$
 PROOF: Induction on y .
- (1)4. $\forall x, y \in N(F). \phi(xy) = \phi(x)\phi(y)$
 PROOF: Induction on y .
- (1)5. Extend ϕ to a bijection $I(F) \cong I(G)$ such that $\forall x, y \in I(F). \phi(x+y) = \phi(x) + \phi(y)$ and $\forall x, y \in I(F). \phi(xy) = \phi(x)\phi(y)$
- (2)1. Define $\phi(0) = 0$ and $\phi(-x) = -\phi(x)$ for $x \in N(F)$
- (3)1. $0 \notin N(F)$
- (3)2. For all $x \in N(F)$ we have $-x \notin N(F)$
 PROOF: Then we would have $x + -x = 0 \in N(F)$.
- (3)3. For all $x \in N(F)$ we have $-x \neq 0$
- (2)2. For all $x, y \in I(F)$ we have $\phi(x+y) = \phi(x) + \phi(y)$
 PROOF: Case analysis on x and y .
- (2)3. For all $x, y \in I(F)$ we have $\phi(xy) = \phi(x)\phi(y)$
 PROOF: Case analysis on x and y .
- (1)6. Extend ϕ to a bijection $Q(F) \cong Q(G)$ such that $\forall x, y \in Q(F). \phi(x+y) = \phi(x) + \phi(y)$ and $\forall x, y \in Q(F). \phi(xy) = \phi(x)\phi(y)$
- (2)1. Define $\phi(x/y) = \phi(x)/\phi(y)$
- (1)7. ϕ is unique.
- (2)1. LET: θ satisfy the theorem.
- (2)2. For all $x \in N(F)$ we have $\theta(x) = \phi(x)$
- (2)3. For all $x \in I(F)$ we have $\theta(x) = \phi(x)$
- (2)4. For all $x \in Q(F)$ we have $\theta(x) = \phi(x)$

□

11.2 Ordered Fields

Definition 11.2.1 (Ordered Field). An *ordered field* is an ordered commutative ring that is a field.

Proposition 11.2.2. Every ordered field F has characteristic 0.

PROOF: We have $0 < n$ for all $n \in N(F)$. □

Proposition 11.2.3. Let F be a field of characteristic 0. Then there exists a unique relation $<$ on $Q(F)$ that makes $Q(F)$ into an ordered field.

PROOF: Easy. □

Corollary 11.2.3.1. Let F and G be ordered fields. Let ϕ be the unique field isomorphism between $Q(F)$ and $Q(G)$. Then ϕ is an ordered field isomorphism.

Definition 11.2.4 (Archimedean). An ordered field F is *Archimedean* iff

$$\forall x \in F. \exists n \in N(F). n > x .$$

Proposition 11.2.5. *Let F be an Archimedean ordered field. Let $x, y \in F$ with $x > 0$. Then there exists $n \in N(F)$ such that $nx > y$.*

PROOF: Pick $n > y/x$. \square

Proposition 11.2.6. *Let F be an Archimedean ordered field. For all $x, y \in F$, if $x < y$, then there exists $r \in Q(F)$ such that $x < r < y$.*

PROOF:

$\langle 1 \rangle 1$. CASE: $x > 0$

$\langle 2 \rangle 1$. PICK $n \in N(F)$ such that $n(y - x) > 1$

PROOF: Proposition 11.2.5.

$\langle 2 \rangle 2$. $ny > 1 + nx$

$\langle 2 \rangle 3$. LET: m be the least element of $N(F)$ such that $m > nx$.

$\langle 2 \rangle 4$. $m - 1 \leq nx$

$\langle 2 \rangle 5$. $nx < m < ny$

$\langle 2 \rangle 6$. $x < m/n < y$

$\langle 1 \rangle 2$. CASE: $x \leq 0$

$\langle 2 \rangle 1$. PICK $k \in N(F)$ such that $k > -x$

$\langle 2 \rangle 2$. $0 < x + k < y + k$

$\langle 2 \rangle 3$. PICK $r \in Q(F)$ such that $x + k < r < y + k$

PROOF: $\langle 1 \rangle 1$

$\langle 2 \rangle 4$. $x < r - k < y$

Definition 11.2.7 (Complete). An ordered field F is *complete* iff every nonempty subset of F bounded above has a least upper bound.

Proposition 11.2.8. *Every complete ordered field is Archimedean.*

PROOF:

$\langle 1 \rangle 1$. LET: F be a complete ordered field.

$\langle 1 \rangle 2$. LET: $x \in F$

$\langle 1 \rangle 3$. ASSUME: for a contradiction there is no member of $N(F)$ greater than x .

$\langle 1 \rangle 4$. x is an upper bound for $N(F)$.

$\langle 1 \rangle 5$. LET: $y = \sup N(F)$

$\langle 1 \rangle 6$. PICK $n \in N(F)$ such that $y - 1 < n$

$\langle 1 \rangle 7$. $y < n + 1$

$\langle 1 \rangle 8$. Q.E.D.

PROOF: This is a contradiction.

\square

Proposition 11.2.9. *Let F be a complete ordered field and $a \in F$ be nonnegative. Then there exists $b \in F$ such that $b^2 = a$.*

PROOF:

$\langle 1 \rangle 1$. LET: $B = \{x \in F \mid 0 \leq x \leq 1 + a\}$

$\langle 1 \rangle 2$. LET: $\phi : B \rightarrow B$ be the function

$$\phi(x) = x + \frac{1}{2(1+a)}(a - x^2) .$$

- ⟨1⟩3. ϕ is strictly monotone.
 ⟨2⟩1. LET: $0 \leq x < y \leq 1 + a$
 ⟨2⟩2. $1 - \frac{x+y}{2(1+a)} > 0$
 ⟨2⟩3. $\phi(y) - \phi(x) = (y - x)(1 - \frac{x+y}{2(1+a)}) > 0$
 ⟨2⟩4. $\phi(x) < \phi(y)$
 ⟨1⟩4. PICK $b \in B$ such that $\phi(b) = b$.
 PROOF: Knaster Fixed-Point Theorem.
 ⟨1⟩5. $b^2 = a$
 \square

Theorem 11.2.10 (Uniqueness of the Complete Ordered Field). *If F and G are complete ordered fields, then there exists a unique bijection $\phi : F \cong G$ such that, for all $x, y \in F$,*

$$\begin{aligned}\phi(x + y) &= \phi(x) + \phi(y) \\ \phi(xy) &= \phi(x)\phi(y)\end{aligned}$$

This bijection also satisfies: for all $x, y \in F$,

$$x < y \Leftrightarrow \phi(x) < \phi(y) .$$

PROOF:

- ⟨1⟩1. PICK a bijection $\phi : Q(F) \cong Q(G)$ such that, for all $x, y \in Q(F)$,
 $\phi(x + y) = \phi(x) + \phi(y)$
 $\phi(xy) = \phi(x)\phi(y)$
 $x < y \Leftrightarrow \phi(x) < \phi(y)$

PROOF: Corollary 11.2.3.1.

- ⟨1⟩2. $Q(F)$ intersects every interval in F .

PROOF: Proposition 11.2.6.

- ⟨1⟩3. $Q(G)$ intersects every interval in G .

PROOF: Proposition 11.2.6.

- ⟨1⟩4. PICK an order isomorphism $\psi : F \cong G$ that extends ϕ .

PROOF: Theorem 5.1.23.

- ⟨1⟩5. $\forall x, y \in F. \psi(x + y) = \psi(x) + \psi(y)$
 ⟨2⟩1. LET: $x, y \in F$
 ⟨2⟩2. $\psi(x) + \psi(y) \not\leq \psi(x + y)$
 ⟨3⟩1. ASSUME: for a contradiction $\psi(x) + \psi(y) < \psi(x + y)$
 ⟨3⟩2. PICK $r' \in Q(G)$ such that $\psi(x) < r' < \psi(x + y) - \psi(y)$
 ⟨3⟩3. PICK $s' \in Q(G)$ such that $\psi(y) < s' < \psi(x + y) - r'$
 ⟨3⟩4. $r' + s' < \psi(x + y)$
 ⟨3⟩5. PICK $r, s \in Q(F)$ such that $\phi(r) = r'$ and $\phi(s) = s'$
 ⟨3⟩6. $\phi(r + s) = r' + s'$
 ⟨3⟩7. $\psi(x) < \psi(r)$
 ⟨3⟩8. $\psi(y) < \psi(s)$
 ⟨3⟩9. $\psi(x + y) > \psi(r + s)$
 ⟨3⟩10. $x < r$

- $\langle 3 \rangle 11. y < s$
- $\langle 3 \rangle 12. x + y > r + s$
- $\langle 3 \rangle 13. \text{Q.E.D.}$

PROOF: This is a contradiction.

- $\langle 2 \rangle 3. \psi(x + y) \not\leq \psi(x) + \psi(y)$

PROOF: Similar.

- $\langle 1 \rangle 6. \forall x, y \in F. \psi(xy) = \psi(x)\psi(y)$

- $\langle 2 \rangle 1. \text{LET: } x, y \in F$

- $\langle 2 \rangle 2. \text{CASE: } x \text{ and } y \text{ are positive.}$

- $\langle 3 \rangle 1. \psi(x)\psi(y) \not\leq \psi(xy)$

- $\langle 4 \rangle 1. \text{ASSUME: for a contradiction } \psi(x)\psi(y) < \psi(xy)$

- $\langle 4 \rangle 2. \text{PICK } r' \in Q(G) \text{ such that } \psi(x) < r' < \psi(xy)/\psi(y)$

- $\langle 4 \rangle 3. \text{PICK } s' \in Q(G) \text{ such that } \psi(y) < s' < \psi(xy)/r'$

- $\langle 4 \rangle 4. r's' < \psi(xy)$

- $\langle 4 \rangle 5. \text{PICK } r, s \in Q(F) \text{ such that } \phi(r) = r' \text{ and } \phi(s) = s'$

- $\langle 4 \rangle 6. \phi(rs) = r's'$

- $\langle 4 \rangle 7. x < r, y < s \text{ and } rs < xy$

- $\langle 4 \rangle 8. \text{Q.E.D.}$

PROOF: This is a contradiction.

- $\langle 3 \rangle 2. \psi(xy) \not\leq \psi(x)\psi(y)$

PROOF: Similar.

- $\langle 2 \rangle 3. \text{CASE: } x \text{ and } y \text{ are not both positive.}$

PROOF: Follows from $\langle 2 \rangle 2$ since $\psi(-x) = -\psi(x)$ by $\langle 1 \rangle 5$.

- $\langle 1 \rangle 7. \text{For any field isomorphism } \theta : F \cong G, \text{ we have } \theta = \psi.$

- $\langle 2 \rangle 1. \theta \upharpoonright Q(F) = \phi$

PROOF: Theorem 11.1.11.

- $\langle 2 \rangle 2. \theta \text{ is strictly monotone.}$

- $\langle 3 \rangle 1. \text{LET: } x, y \in F \text{ with } x < y$

- $\langle 3 \rangle 2. y - x > 0$

- $\langle 3 \rangle 3. \text{PICK } z \in F \text{ such that } z^2 = y - x$

- $\langle 3 \rangle 4. \theta(z)^2 = \theta(y) - \theta(x)$

- $\langle 3 \rangle 5. \theta(y) - \theta(x) > 0$

- $\langle 3 \rangle 6. \theta(x) < \theta(y)$

- $\langle 2 \rangle 3. \theta = \psi$

PROOF: By the uniqueness of ψ .

Chapter 12

Number Systems

12.1 The Integers

Definition 12.1.1. The set of *integers* \mathbb{Z} is the quotient set \mathbb{N}^2 / \sim , where $(m, n) \sim (p, q)$ iff $m + q = n + p$.

We prove \sim is an equivalence relation on \mathbb{N}^2 .

PROOF:

$\langle 1 \rangle 1.$ \sim is reflexive.

PROOF: For all $m, n \in \mathbb{N}$ we have $m + n = n + m$.

$\langle 1 \rangle 2.$ \sim is symmetric.

PROOF: If $m + q = n + p$ then $p + n = q + m$.

$\langle 1 \rangle 3.$ \sim is transitive.

$\langle 2 \rangle 1.$ ASSUME: $(m, n) \sim (p, q) \sim (r, s)$

$\langle 2 \rangle 2.$ $m + q = n + p$ and $p + s = q + r$

$\langle 2 \rangle 3.$ $m + q + s = n + q + r$

$\langle 2 \rangle 4.$ $m + s = n + r$

PROOF: Corollary ??.

□

Definition 12.1.2 (Addition). Define *addition* $+$ on \mathbb{Z} by $[(m, n)] + [(p, q)] = [(m + p, n + q)]$.

We prove this is well-defined.

PROOF: If $m + n' = n + m'$ and $p + q' = q + p'$ then $m + p + n' + q' = n + q + m' + p'$.

□

Proposition 12.1.3. *Addition on \mathbb{Z} is commutative.*

PROOF: $[(m, n)] + [(p, q)] = [(m + p, n + q)] = [(p + m, q + n)] = [(p, q)] + [(m, n)]$.

□

Proposition 12.1.4. *Addition on \mathbb{Z} is associative.*

PROOF: $[(m, n)] + [(p, q)] + [(r, s)] = [(m + p + r, n + q + s)] = [(m, n)] + [(p, q)] + [(r, s)]$. \square

Proposition 12.1.5. *Given natural numbers m and n , we have $[(m, 0)] = [(n, 0)]$ iff $m = n$.*

PROOF: Immediate from definitions. \square

Definition 12.1.6. We identify any natural number n with the integer $[(n, 0)]$.

Proposition 12.1.7. *Addition on integers agrees with addition on natural numbers.*

PROOF: Since $[(m, 0)] + [(n, 0)] = [(m + n, 0)]$. \square

Proposition 12.1.8. *For all $a \in \mathbb{Z}$ we have $a + 0 = a$.*

PROOF: $[(m, n)] + [(0, 0)] = [(m + 0, n + 0)] = [(m, n)]$. \square

Proposition 12.1.9. *For all $a \in \mathbb{Z}$, there exists $b \in \mathbb{Z}$ such that $a + b = 0$.*

PROOF: $[(m, n)] + [(n, m)] = [(m + n, m + n)] = [(0, 0)]$ \square

Proposition 12.1.10. *The integers form an Abelian group under addition.*

PROOF: Proposition 12.1.3, 12.1.4, 12.1.8, 12.1.9. \square

Definition 12.1.11. Define multiplication \cdot on \mathbb{Z} by: $[(m, n)][(p, q)] = [(mp + nq, mq + np)]$.

We prove this is well defined.

PROOF:

$\langle 1 \rangle 1$. ASSUME: $m + n' = n + m'$ and $p + q' = q + p'$

PROVE: $mp + nq + m'q' + n'p' = mq + np + m'p' + n'q'$

$\langle 1 \rangle 2$. $mp + n'p = np + m'p$

$\langle 1 \rangle 3$. $nq + m'q = mq + n'q$

$\langle 1 \rangle 4$. $m'p + m'q' = m'q + m'p'$

$\langle 1 \rangle 5$. $n'q + n'p' = n'p + n'q'$

$\langle 1 \rangle 6$. $mp + n'p + nq + m'q + m'p + m'q' + n'q + n'p' = np + m'p + mq + n'q + m'q + m'p' + n'p + n'q'$

$\langle 1 \rangle 7$. $mp + nq + m'q' + n'p' = mq + np + m'p' + n'q'$

PROOF: Corollary ??.

\square

Proposition 12.1.12. *Multiplication on integers agrees with multiplication on natural numbers.*

PROOF: Since $[(m, 0)][(n, 0)] = [(mn + 0, m0 + n0)] = [(mn, 0)]$. \square

Proposition 12.1.13. *Multiplication on \mathbb{Z} is commutative.*

PROOF: $[(m, n)][(p, q)] = [(mp + nq, mq + np)] = [(pm + qn, pn + qm)] = [(p, q)][(m, n)]$. \square

Proposition 12.1.14. *Multiplication on \mathbb{Z} is associative.*

PROOF:

$$\begin{aligned}
 [(m, n)]((p, q))[(r, s)] &= [(m, n)][(pr + qs, ps + qr)] \\
 &= [(mpr + mqs + nps + nqr, mps + mqr + npr + nqs)] \\
 &= [(mp + nq, mq + np)][(r, s)] \\
 &= ((m, n))[(p, q)][(r, s)] \quad \square
 \end{aligned}$$

Proposition 12.1.15. *Multiplication distributes over addition.*

PROOF:

$$\begin{aligned}
 [(m, n)]((p, q)) + [(r, s)] &= [(m, n)][(p + r, q + s)] \\
 &= [(mp + mr + nq + ns, np + nr + mq + ms)] \\
 [(m, n)]((p, q)) + [(m, n)]((r, s)) &= [(mp + nq, mq + np)] + [(mr + ns, ms + nr)] \\
 &= [(mp + nq + mr + ns, mq + np + ms + nr)] \quad \square
 \end{aligned}$$

Proposition 12.1.16. *For any integer a we have $a1 = a$.*

PROOF: Since $[(m, n)][(1, 0)] = [(m1 + n0, m0 + n1)] = [(m, n)]$. \square

Proposition 12.1.17. *For any integers a and b , if $ab = 0$ then $a = 0$ or $b = 0$.*

PROOF:

$\langle 1 \rangle 1$. ASSUME: $[(m, n)][(p, q)] = [(0, 0)]$

$\langle 1 \rangle 2$. $mp + nq = mq + np$

$\langle 1 \rangle 3$. ASSUME: $[(m, n)] \neq [(0, 0)]$

$\langle 1 \rangle 4$. $m \neq n$

PROVE: $p = q$

$\langle 1 \rangle 5$. CASE: $m < n$

$\langle 2 \rangle 1$. $p \not\leq q$

PROOF: If $p < q$ then $mq + np < mp + nq$ by Proposition 8.6.10.

$\langle 2 \rangle 2$. $q \not\leq p$

PROOF: If $q < p$ then $mp + nq < mq + np$ by Proposition 8.6.10.

$\langle 2 \rangle 3$. $p = q$

PROOF: By trichotomy.

$\langle 1 \rangle 6$. CASE: $n < m$

PROOF: Similar.

\square

Proposition 12.1.18. *The integers \mathbb{Z} form an integral domain.*

PROOF: Propositions 12.1.13, 12.1.14, 12.1.15, 12.1.16, 12.1.17, 12.1.10. \square

Definition 12.1.19. Define $<$ on \mathbb{Z} by $[(m, n)] < [(p, q)]$ if and only if $m + q < n + p$.

We prove this is well-defined.

PROOF:

$\langle 1 \rangle 1$. ASSUME: $m + n' = n + m'$ and $p + q' = q + p'$.

PROVE: $m + q < n + p$ if and only if $m' + q' < n' + p'$

$\langle 1 \rangle 2$. $m + q < n + p$ if and only if $m' + q' < n' + p'$

PROOF:

$$m + q < n + p \Leftrightarrow m + n' + q < n + n' + p \quad (\text{Theorem ??})$$

$$\Leftrightarrow m' + n + q < n + n' + p$$

$$\Leftrightarrow m' + q < n' + p \quad (\text{Theorem ??})$$

$$\Leftrightarrow m' + q + p' < n' + p + p' \quad (\text{Theorem ??})$$

$$\Leftrightarrow m' + q' + p < n' + p + p'$$

$$\Leftrightarrow m' + q' < n' + p' \quad (\text{Theorem ??}) \square$$

Proposition 12.1.20. *The ordering on the integers agrees with the ordering on the natural numbers.*

PROOF: We have $[(m, 0)] < [(n, 0)]$ iff $m < n$. \square

Proposition 12.1.21. *$<$ is a linear order on \mathbb{Z} .*

PROOF:

$\langle 1 \rangle 1$. $<$ is irreflexive.

PROOF: We never have $m + n < m + n$.

$\langle 1 \rangle 2$. $<$ is transitive.

$\langle 2 \rangle 1$. ASSUME: $[(m, n)] < [(p, q)] < [(r, s)]$

$\langle 2 \rangle 2$. $m + q < n + p$ and $p + s < q + r$

$\langle 2 \rangle 3$. $m + q + s < n + q + r$

PROOF: $m + q + s < n + p + s < n + q + r$

$\langle 2 \rangle 4$. $m + s < n + r$

PROOF: Theorem ??.

$\langle 1 \rangle 3$. $<$ is total.

PROOF: Given natural numbers m, n, p and q , either $m + q < n + p$, or $m + q = n + p$, or $n + p < m + q$.

\square

Definition 12.1.22 (Positive). An integer a is *positive* iff $a > 0$.

Theorem 12.1.23. *For any integers a, b and c , we have $a < b$ if and only if $a + c < b + c$.*

PROOF:

$\langle 1 \rangle 1$. If $a < b$ then $a + c < b + c$.

$\langle 2 \rangle 1$. LET: $a = [(m, n)]$, $b = [(p, q)]$ and $c = [(r, s)]$.

$\langle 2 \rangle 2$. ASSUME: $a < b$

$\langle 2 \rangle 3$. $m + q < n + p$

$\langle 2 \rangle 4$. $m + r + q + s < n + r + p + s$

$\langle 2 \rangle 5$. $[(m + r, n + s)] < [(p + r, q + s)]$

$\langle 2 \rangle 6$. $a + c < b + c$

$\langle 1 \rangle 2$. If $a + c < b + c$ then $a < b$.

PROOF: From $\langle 1 \rangle 1$ and Proposition 5.1.29.

□

Proposition 12.1.24. *Let a , b and c be integers. If $0 < c$, then $a < b$ if and only if $ac < bc$.*

PROOF:

$\langle 1 \rangle 1$. LET: $c = [(r, s)]$

$\langle 1 \rangle 2$. ASSUME: $0 < c$

$\langle 1 \rangle 3$. $s < r$

$\langle 1 \rangle 4$. For all integers a and b , if $a < b$ then $ac < bc$

$\langle 2 \rangle 1$. LET: $a = [(m, n)]$, $b = [(p, q)]$.

$\langle 2 \rangle 2$. ASSUME: $a < b$

$\langle 2 \rangle 3$. $m + q < n + p$

$\langle 2 \rangle 4$. $(m + q)r + (p + n)s < (m + q)s + (p + n)r$

PROOF: Proposition 8.6.10, $\langle 1 \rangle 3$, $\langle 2 \rangle 3$.

$\langle 2 \rangle 5$. $mr + ns + ps + qr < ms + nr + pr + qs$

$\langle 2 \rangle 6$. $[(mr + ns, ms + nr)] < [(pr + qs, ps + qr)]$

$\langle 2 \rangle 7$. $ac < bc$

$\langle 1 \rangle 5$. For all integers a and b , if $ac < bc$ then $a < b$

PROOF: From $\langle 1 \rangle 4$ and Proposition 5.1.29.

□

Proposition 12.1.25. *Let a be a positive integer. For any integer b , there exists $k \in \mathbb{N}$ such that $b < ak$.*

PROOF:

$\langle 1 \rangle 1$. CASE: $b \leq 0$

PROOF: Take $k = 1$.

$\langle 1 \rangle 2$. CASE: $b > 0$

PROOF: Take $k = b + 1$.

□

12.2 The Rationals

Definition 12.2.1 (Rational Numbers). The set \mathbb{Q} of *rational numbers* is the field of fractions over the integers.

Proposition 12.2.2. *For any integers a and b , we have $[(a, 1)] = [(b, 1)]$ iff $a = b$.*

PROOF: Immediate from definitions. □

Henceforth we identify any integer a with the rational number $[(a, 1)]$.

Proposition 12.2.3. *Addition on the rationals agrees with addition on the integers.*

PROOF: $[(a, 1)] + [(b, 1)] = [(a \cdot 1 + b \cdot 1, 1 \cdot 1)] = [(a + b, 1)]$. \square

Proposition 12.2.4. *Multiplication on the rationals agrees with multiplication on the integers.*

PROOF: $[(a, 1)][(b, 1)] = [(ab, 1)]$ \square

Definition 12.2.5. Define the ordering $<$ on the rationals by: if b and d are positive, then $[(a, b)] < [(c, d)]$ iff $ad < bc$.

We prove this is well-defined.

PROOF:

$\langle 1 \rangle 1$. For any rational q , there exist integers a, b with b positive such that $q = [(a, b)]$.

PROOF: Since $[(a, b)] = [(-a, -b)]$, and if $b \neq 0$ then one of b and $-b$ is positive.

$\langle 1 \rangle 2$. If b, b', d and d' are positive, $[(a, b)] = [(a', b')]$, and $[(c, d)] = [(c', d')]$, then $ad < bc$ iff $a'd' < b'c'$.

PROOF:

$\langle 2 \rangle 1$. If $ad < bc$ then $a'd' < b'c'$.

$\langle 3 \rangle 1$. ASSUME: $ad < bc$

$\langle 3 \rangle 2$. $ab'd < bb'c$

$\langle 3 \rangle 3$. $a'bd < bb'c$

$\langle 3 \rangle 4$. $a'd < b'c$

$\langle 3 \rangle 5$. $a'dd' < b'cd'$

$\langle 3 \rangle 6$. $a'dd' < b'c'd$

$\langle 3 \rangle 7$. $a'd' < b'c'$

$\langle 2 \rangle 2$. If $a'd' < b'c'$ then $ad < bc$.

PROOF: Similar.

\square

Proposition 12.2.6. *The ordering on the rationals agrees with the ordering on the integers.*

PROOF: We have $[(a, 1)] < [(b, 1)]$ if and only if $a < b$. \square

Proposition 12.2.7. *The relation $<$ is a linear ordering on \mathbb{Q} .*

PROOF:

$\langle 1 \rangle 1$. $<$ is irreflexive.

PROOF: We never have $ab < ab$.

$\langle 1 \rangle 2$. $<$ is transitive.

$\langle 2 \rangle 1$. ASSUME: $[(a, b)] < [(c, d)] < [(e, f)]$ where b, d and f are positive.

$\langle 2 \rangle 2$. $ad < bc$ and $cf < de$

$\langle 2 \rangle 3$. $adf < bde$

PROOF: $adf < bcf < bde$

$\langle 2 \rangle 4$. $af < be$

$\langle 1 \rangle 3$. $<$ is total.

PROOF: For any integers a, b, c, d , we have $ad < bc$ or $ad = bc$ or $bc < ad$.

□

Proposition 12.2.8. *For any rationals r , s and t , we have $r < s$ if and only if $r + t < s + t$.*

PROOF:

⟨1⟩1. LET: a, b, c, d, e, f be integers with b, d and f positive.

⟨1⟩2. $[(a, b)] + [(e, f)] < [(c, d)] + [(e, f)]$ if and only if $[(a, b)] < [(c, d)]$.

PROOF:

$$\begin{aligned}
 [(a, b)] + [(e, f)] < [(c, d)] + [(e, f)] &\Leftrightarrow [(af + be, bf)] < [(cf + de, df)] \\
 &\Leftrightarrow (af + be)df < (cf + de)bf \\
 &\Leftrightarrow afd f + bedf < cfbf + debf \\
 &\Leftrightarrow afd f < cfbf \\
 &\Leftrightarrow ad < bc \\
 &\Leftrightarrow [(a, b)] < [(c, d)]
 \end{aligned}$$

□

Corollary 12.2.8.1. *For any rational r , we have $r < 0$ if and only if $0 < -r$.*

Definition 12.2.9 (Absolute Value). For any rational r , the *absolute value* of r is defined by

$$|r| := \begin{cases} -r & \text{if } 0 < -r \\ r & \text{otherwise} \end{cases}$$

Proposition 12.2.10. *For any rationals r , s and t , if t is positive then $r < s$ iff $rt < st$.*

PROOF:

⟨1⟩1. LET: $r = [(a, b)]$, $s = [(c, d)]$ and $t = [(e, f)]$ where b, d and f are positive.

⟨1⟩2. ASSUME: $0 < t$

⟨1⟩3. $e > 0$

⟨1⟩4. $rt < st$ iff $r < s$

PROOF:

$$\begin{aligned}
 rt < st &\Leftrightarrow [(ae, bf)] < [(ce, df)] \\
 &\Leftrightarrow aedf < cebf \\
 &\Leftrightarrow ad < bc \\
 &\Leftrightarrow r < s
 \end{aligned}$$

□

Corollary 12.2.10.1. *The rationals form an ordered field.*

Proposition 12.2.11. *Let p be a positive rational. For any rational number r , there exists $k \in \mathbb{N}$ such that $r < pk$.*

PROOF:

⟨1⟩1. LET: $p = a/b$ and $r = c/d$ where a, b and d are positive.

$\langle 1 \rangle 2$. PICK $k \in \mathbb{N}$ such that $bc < adk$

PROOF: Proposition 12.1.25.

$\langle 1 \rangle 3$. $r < pk$

□

Proposition 12.2.12. $\mathbb{Q} \approx \mathbb{N}$

PROOF: Arrange the rationals in order $0/1, 1/1, 1/2, 0/2, -1/2, -1/1, -2/1, -2/2, -2/3, -1/3, 0/3, 1/3, 2/3$, etc. then remove all duplicates. □

12.3 The Real Numbers

Definition 12.3.1 (Cauchy Sequence). A *Cauchy sequence* is a sequence (q_n) of rationals such that, for every positive rational ϵ , there exists $k \in \mathbb{N}$ such that $\forall m, n > k. |q_m - q_n| < \epsilon$.

Definition 12.3.2 (Dedekind Cut). A *Dedekind cut* is a set $x \subseteq \mathbb{Q}$ such that:

1. $\emptyset \neq x \neq \mathbb{Q}$
2. x is closed downwards.
3. x has no greatest member.

The set \mathbb{R} of *real numbers* is the set of Dedekind cuts.

Proposition 12.3.3. For any rational q , we have $\{r \in \mathbb{Q} \mid r < q\} \in \mathbb{R}$.

PROOF:

$\langle 1 \rangle 1$. LET: $q \in \mathbb{Q}$

$\langle 1 \rangle 2$. LET: $q \downarrow = \{r \mid r < q\}$

$\langle 1 \rangle 3$. $q \notin q \downarrow$

PROOF: We have $q - 1 \in q \downarrow$.

$\langle 1 \rangle 4$. $q \notin q \downarrow$

PROOF: Since $q \notin q \downarrow$.

$\langle 1 \rangle 5$. $q \downarrow$ is closed downwards.

PROOF: Trivial.

$\langle 1 \rangle 6$. $q \downarrow$ has no greatest element.

PROOF: For all $r \in q \downarrow$ we have $r < (q + r)/2 \in q \downarrow$.

□

Proposition 12.3.4. For rationals q and r , we have $q = r$ if and only if $\{s \in \mathbb{Q} \mid s < q\} = \{s \in \mathbb{Q} \mid s < r\}$.

PROOF:

$\langle 1 \rangle 1$. LET: $q \downarrow = \{s \in \mathbb{Q} \mid s < q\}$

$\langle 1 \rangle 2$. LET: $r \downarrow = \{s \in \mathbb{Q} \mid s < r\}$

$\langle 1 \rangle 3$. If $q = r$ then $q \downarrow = r \downarrow$

PROOF: Trivial.

$\langle 1 \rangle 4$. If $q < r$ then $q \downarrow \neq r \downarrow$

PROOF: We have $q \in r \downarrow$ and $q \notin q \downarrow$.

$\langle 1 \rangle 5$. If $r < q$ then $q \downarrow \neq r \downarrow$

PROOF: We have $r \in q \downarrow$ and $q \notin q \downarrow$.

□

Henceforth we identify a rational q with the real number $\{r \in \mathbb{Q} \mid r < q\}$.

Definition 12.3.5. Define the ordering $<$ on \mathbb{R} by: $x < y$ iff $x \subsetneq y$.

Proposition 12.3.6. *The ordering on the reals agrees with the ordering on the rationals.*

PROOF:

$\langle 1 \rangle 1$. LET: $q, r \in \mathbb{Q}$

$\langle 1 \rangle 2$. LET: $q \downarrow = \{s \in \mathbb{Q} \mid s < q\}$.

$\langle 1 \rangle 3$. LET: $r \downarrow = \{s \in \mathbb{Q} \mid s < r\}$.

PROVE: $q < r$ iff $q \downarrow \subsetneq r \downarrow$

$\langle 1 \rangle 4$. If $q < r$ then $q \downarrow \subsetneq r \downarrow$

$\langle 2 \rangle 1$. ASSUME: $q < r$

$\langle 2 \rangle 2$. $q \downarrow \subseteq r \downarrow$

PROOF: If $s < q$ then $s < r$.

$\langle 2 \rangle 3$. $q \downarrow \neq r \downarrow$

PROOF: Proposition 12.3.4.

$\langle 1 \rangle 5$. If $q \downarrow \subsetneq r \downarrow$ then $q < r$

$\langle 2 \rangle 1$. ASSUME: $q \downarrow \subsetneq r \downarrow$

$\langle 2 \rangle 2$. PICK $s \in r \downarrow$ such that $s \notin q \downarrow$

$\langle 2 \rangle 3$. $q \leq s < r$

□

Proposition 12.3.7. *The ordering $<$ is a linear ordering on \mathbb{R} .*

PROOF:

$\langle 1 \rangle 1$. $<$ is irreflexive.

PROOF: No set is a proper subset of itself.

$\langle 1 \rangle 2$. $<$ is transitive.

PROOF: Since the relationship \subsetneq is transitive on the class of all sets.

$\langle 1 \rangle 3$. $<$ is total.

$\langle 2 \rangle 1$. LET: x, y be Dedekind cuts.

$\langle 2 \rangle 2$. ASSUME: $x \not\subseteq y$

PROVE: $y \subsetneq x$

$\langle 2 \rangle 3$. PICK $q \in x$ such that $q \notin y$

$\langle 2 \rangle 4$. LET: $r \in y$

PROVE: $r \in x$

$\langle 2 \rangle 5$. $q \not\leq r$

PROOF: Since y is closed downwards.

$\langle 2 \rangle 6$. $r < q$

$\langle 2 \rangle 7$. $r \in x$

PROOF: Since x is closed downwards.

□

Proposition 12.3.8. *Any bounded nonempty subset of \mathbb{R} has a least upper bound.*

PROOF:

⟨1⟩1. LET: A be a bounded nonempty subset of \mathbb{R} .

⟨1⟩2. $\bigcup A$ is a Dedekind cut.

⟨2⟩1. $\bigcup A \neq \emptyset$

⟨3⟩1. PICK $x \in A$

⟨3⟩2. PICK $q \in x$

⟨3⟩3. $q \in \bigcup A$

⟨2⟩2. $\bigcup A \neq \mathbb{Q}$

⟨3⟩1. PICK an upper bound u for A

⟨3⟩2. PICK $q \notin u$

PROVE: $q \notin \bigcup A$

⟨3⟩3. ASSUME: for a contradiction $q \in \bigcup A$

⟨3⟩4. PICK $x \in A$ such that $q \in x$

⟨3⟩5. $x \leq u$

⟨3⟩6. $q \in u$

⟨3⟩7. Q.E.D.

PROOF: This is a contradiction.

⟨2⟩3. $\bigcup A$ is closed downwards.

⟨3⟩1. LET: $q \in \bigcup A$ and $r < q$

⟨3⟩2. PICK $x \in A$ such that $q \in x$

⟨3⟩3. $r \in x$

⟨3⟩4. $r \in \bigcup A$

⟨2⟩4. $\bigcup A$ has no greatest element.

⟨3⟩1. LET: $q \in \bigcup A$

⟨3⟩2. PICK $x \in A$ such that $q \in x$

⟨3⟩3. PICK $r \in x$ such that $q < r$

⟨3⟩4. $r \in \bigcup A$

⟨1⟩3. $\bigcup A$ is an upper bound for A .

PROOF: For all $x \in A$ we have $x \subseteq \bigcup A$.

⟨1⟩4. For any upper bound u for $\bigcup A$ we have $\bigcup A \leq u$.

PROOF: If $\forall x \in A. x \subseteq u$ we have $\bigcup A \subseteq u$.

□

Definition 12.3.9 (Addition). Define *addition* $+$ on the reals by

$$x + y := \{q + r \mid q \in x, r \in y\} .$$

We prove this is well-defined.

PROOF:

⟨1⟩1. LET: $x, y \in \mathbb{R}$

PROVE: $X + y$ is a Dedekind cut.

$\langle 1 \rangle 2. x + y \neq \emptyset$

PROOF: Pick $q \in x$ and $r \in y$; then $q + r \in x + y$.

$\langle 1 \rangle 3. x + y \neq \mathbb{Q}$

$\langle 2 \rangle 1. \text{ PICK } q \notin x \text{ and } r \notin y$

PROVE: $q + r \notin x + y$

$\langle 2 \rangle 2. \text{ ASSUME: for a contradiction } q + r \in x + y$

$\langle 2 \rangle 3. \text{ PICK } q' \in x \text{ and } r' \in y \text{ such that } q + r = q' + r'$

$\langle 2 \rangle 4. q' < q \text{ and } r' < r$

$\langle 2 \rangle 5. q' + r' < q + r$

$\langle 2 \rangle 6. \text{ Q.E.D.}$

PROOF: This is a contradiction.

$\langle 1 \rangle 4. x + y$ is closed downwards.

$\langle 2 \rangle 1. \text{ LET: } q \in x \text{ and } r \in y$

$\langle 2 \rangle 2. \text{ LET: } s < q + r$

PROVE: $s \in x + y$

$\langle 2 \rangle 3. s - r < q$

$\langle 2 \rangle 4. s - r \in x$

$\langle 2 \rangle 5. s = (s - r) + r \in x + y$

$\langle 1 \rangle 5. x + y$ has no greatest element.

$\langle 2 \rangle 1. \text{ LET: } q \in x \text{ and } r \in y$

PROVE: There exists $s \in x + y$ such that $q + r < s$

$\langle 2 \rangle 2. \text{ PICK } q' \in x \text{ and } r' \in y \text{ such that } q < q' \text{ and } r < r'$

$\langle 2 \rangle 3. q + r < q' + r' \in x + y$

□

Proposition 12.3.10. *Addition on the reals agrees with addition on the rationals.*

PROOF:

$\langle 1 \rangle 1. \text{ LET: } q, r \in \mathbb{Q}$

$\langle 1 \rangle 2. q \downarrow + r \downarrow \subseteq (q + r) \downarrow$

PROOF: If $s_1 < q$ and $s_2 < r$ then $s_1 + s_2 < q + r$.

$\langle 1 \rangle 3. (q + r) \downarrow \subseteq q \downarrow + r \downarrow$

$\langle 2 \rangle 1. \text{ LET: } s < q + r$

$\langle 2 \rangle 2. s - r < q$

$\langle 2 \rangle 3. \text{ PICK } t \text{ such that } s - r < t < q$

$\langle 2 \rangle 4. s - t < r$

$\langle 2 \rangle 5. s = t + (s - t) \in q \downarrow + r \downarrow$

□

Proposition 12.3.11. *Addition is associative.*

PROOF:

$$\begin{aligned} x + (y + z) &= \{q + r \mid q \in x, r \in y + z\} \\ &= \{q + s_1 + s_2 \mid q \in x, s_1 \in y, s_2 \in z\} \\ &= \{r + s_2 \mid r \in x + y, s_2 \in z\} \\ &= (x + y) + z \end{aligned}$$

□

Proposition 12.3.12. *Addition is commutative.*

PROOF:

$$\begin{aligned} x + y &= \{q + r \mid q \in x, r \in y\} \\ &= \{r + q \mid r \in y, q \in x\} \\ &= y + x \end{aligned}$$

□

Proposition 12.3.13. *For any $x \in \mathbb{R}$ we have $x + 0 = x$.*

PROOF:

⟨1⟩1. $x + 0 \subseteq x$

PROOF: If $q \in x$ and $r < 0$ then $q + r < q$ so $q + r \in x$.

⟨1⟩2. $x \subseteq x + 0$

⟨2⟩1. LET: $q \in x$

⟨2⟩2. PICK $r \in x$ such that $q < r$.

PROOF: x has no greatest element.

⟨2⟩3. $q - r < 0$

⟨2⟩4. $q = r + (q - r) \in x + 0$

□

Definition 12.3.14. For $x \in \mathbb{R}$, define $-x := \{q \in \mathbb{Q} \mid \exists r > q. -r \notin x\}$.

Proposition 12.3.15. *For all $x \in \mathbb{R}$ we have $-x \in \mathbb{R}$.*

PROOF:

⟨1⟩1. LET: $x \in \mathbb{R}$

⟨1⟩2. $-x \neq \emptyset$

⟨2⟩1. PICK $s \notin x$

⟨2⟩2. $-s - 1 \in -x$

⟨1⟩3. $-x \neq \mathbb{Q}$

⟨2⟩1. PICK $s \in x$

PROVE: $-s \notin -x$

⟨2⟩2. ASSUME: for a contradiction $-s \in -x$

⟨2⟩3. PICK $r > -s$ such that $-r \notin x$

⟨2⟩4. $-r < s$

⟨2⟩5. Q.E.D.

PROOF: This contradicts the fact that x is closed downwards.

⟨1⟩4. $-x$ is closed downwards.

PROOF: Immediate from definition.

⟨1⟩5. $-x$ has no greatest element.

⟨2⟩1. LET: $q \in -x$

⟨2⟩2. PICK $r > q$ such that $-r \notin x$

⟨2⟩3. PICK s such that $q < s < r$

⟨2⟩4. $s \in -x$

□

Lemma 12.3.16. *Let p be a positive rational number. For any real number x , there exists a rational $q \in x$ such that $p + q \notin x$.*

PROOF:

- $\langle 1 \rangle 1$. PICK $q_0 \in x$
- $\langle 1 \rangle 2$. There exists $k \in \mathbb{N}$ such that $q_0 + kp \notin x$

 - $\langle 2 \rangle 7$. $p - q \in -x$
 - $\langle 2 \rangle 8$. $p \in x + (-x)$

□

Corollary 12.3.17.1. *The reals form an Abelian group under addition.*

Proposition 12.3.18. *For any reals x, y and z , we have $x < y$ if and only if $x + z < y + z$.*

PROOF:

- $\langle 1 \rangle 1$. $\forall x, y, z \in \mathbb{R}. x \leq y \Rightarrow x + z \leq y + z$
 - $\langle 2 \rangle 1$. LET: $x, y, z \in \mathbb{R}$
 - $\langle 2 \rangle 2$. ASSUME: $x \leq y$
 - $\langle 2 \rangle 3$. For all $q \in x$ and $r \in z$ we have $q + r \in y + z$

⟨1⟩2. $\forall x, y, z \in \mathbb{R}. x + z = y + z \Leftrightarrow x = y$

PROOF: Proposition 9.1.4.

⟨1⟩3. $\forall x, y, z \in \mathbb{R}. x < y \Rightarrow x + z < y + z$

⟨1⟩4. Q.E.D.

PROOF: Proposition 5.1.29.

□

Definition 12.3.19 (Absolute Value). The *absolute value* of a real number x is defined to be

$$|x| = \begin{cases} x & \text{if } 0 \leq x \\ -x & \text{if } x < 0 \end{cases}$$

Definition 12.3.20 (Multiplication). Define *multiplication* \cdot on \mathbb{R} as follows:

- If x and y are non-negative then

$$xy = 0 \cup \{rs \mid 0 \leq r \in x \wedge 0 \leq s \in y\} .$$

- If x and y are both negative then

$$xy = (-x)(-y) .$$

- If one of x and y is negative and one is non-negative then

$$xy = -(|x||y|) .$$

We prove this is well-defined.

PROOF:

⟨1⟩1. LET: x and y be non-negative reals.

PROVE: xy is real.

⟨1⟩2. $xy \neq \emptyset$

PROOF: Since $-1 \in xy$.

⟨1⟩3. $xy \neq \mathbb{Q}$

⟨2⟩1. PICK $r \notin x$ and $s \notin y$

PROVE: $rs \notin xy$

⟨2⟩2. $0 \leq r$ and $0 \leq s$

PROOF: Since $0 \subseteq x$ and $0 \subseteq y$.

⟨2⟩3. ASSUME: for a contradiction $rs \in xy$

⟨2⟩4. PICK r' and s' such that $0 \leq r' \in x$, $0 \leq s' \in y$ and $rs = r's'$

⟨2⟩5. $r' < r$

⟨2⟩6. $s' < s$

⟨2⟩7. $r's' < rs$

⟨2⟩8. Q.E.D.

PROOF: This is a contradiction.

⟨1⟩4. xy is closed downwards.

⟨2⟩1. LET: $q \in xy$ and $r < q$

- ⟨2⟩2. CASE: $q \in 0$
 PROOF: Then $r < q < 0$ so $r \in xy$
- ⟨2⟩3. CASE: $q = s_1 s_2$ where $0 \leq s_1 \in x$ and $0 \leq s_2 \in y$
 - ⟨3⟩1. ASSUME: w.l.o.g. $0 \leq r$
 - ⟨3⟩2. $0 < s_1$ and $0 < s_2$
 - ⟨3⟩3. $r/s_2 < s_1$
 - ⟨3⟩4. $r/s_2 \in x$
 - ⟨3⟩5. $r = (r/s_2)s_2 \in xy$
- ⟨1⟩5. xy has no greatest element.
 - ⟨2⟩1. LET: $q \in xy$
 - ⟨2⟩2. CASE: $q \in 0$
 PROOF: $q < q/2 \in 0$
 - ⟨2⟩3. CASE: $q = rs$ where $0 \leq r \in x$ and $0 \leq s \in y$
 - ⟨3⟩1. PICK r' and s' with $r < r' \in x$ and $s < s' \in y$
 - ⟨3⟩2. $q < r's' \in xy$

□

Proposition 12.3.21. *Multiplication is commutative.*

PROOF: Immediate from definition. □

Proposition 12.3.22. *Multiplication is associative.*

PROOF:

- ⟨1⟩1. For non-negative reals x, y and z , we have $x(yz) = (xy)z$
 PROOF: It computes to $0 \cup \{qrs \mid 0 \leq q \in x, 0 \leq r \in y, 0 \leq s \in z\}$.
- ⟨1⟩2. For all reals x, y and z , we have $x(yz) = (xy)z$
 PROOF: It is equal to $|x||y||z|$ if an even number of them are negative, and $-(|x||y||z|)$ otherwise.

□

Proposition 12.3.23. *Multiplication distributes over addition.*

PROOF:

- ⟨1⟩1. For all non-negative reals x, y and z , we have $x(y + z) = xy + xz$
 - ⟨2⟩1. LET: x, y and z be non-negative reals.
 - ⟨2⟩2. $x(y + z) \subseteq xy + xz$
 - ⟨3⟩1. LET: $q \in x(y + z)$
 - ⟨3⟩2. CASE: $q < 0$
 PROOF: Then we have $q/2 \in xy$ and $q/2 \in xz$ so $q \in xy + xz$.
 - ⟨3⟩3. CASE: $q = rs$ where $0 \leq r \in x$ and $0 \leq s \in y + z$
 - ⟨4⟩1. PICK $s_1 \in y$ and $s_2 \in z$ such that $s = s_1 + s_2$
 - ⟨4⟩2. $rs_1 \in xy$
 PROOF: If $s_1 < 0$ then $rs_1 < 0$ so $rs_1 \in xy$. If $0 \leq s_1$ then we also have $rs_1 \in xy$.
 - ⟨4⟩3. $rs_2 \in xz$
 PROOF: Similar.
 - ⟨4⟩4. $q \in xy + xz$

PROOF: Since $q = rs_1 + rs_2$.

$\langle 2 \rangle 3$. $xy + xz \subseteq x(y + z)$

$\langle 3 \rangle 1$. LET: $q \in xy$ and $r \in xz$.

PROVE: $q + r \in x(y + z)$

$\langle 3 \rangle 2$. CASE: $q < 0$ and $r < 0$

PROOF: Then $q + r < 0$ so $q + r \in x(y + z)$.

$\langle 3 \rangle 3$. CASE: $q < 0$ and $r = r_1 r_2$ where $0 \leq r_1 \in x$ and $0 \leq r_2 \in z$

$\langle 4 \rangle 1$. $q + r < r$

$\langle 4 \rangle 2$. $q + r \in xz$

$\langle 4 \rangle 3$. ASSUME: w.l.o.g. $0 \leq q + r$

PROOF: Otherwise $q + r \in x(y + z)$ immediately.

$\langle 4 \rangle 4$. PICK s_1, s_2 with $0 \leq s_1 \in x, 0 \leq s_2 \in y$ and $q + r = s_1 s_2$

$\langle 4 \rangle 5$. $s_2 \in y + z$

PROOF: Since $0 \in z$ so $s_2 = s_2 + 0 \in y + z$.

$\langle 4 \rangle 6$. $q + r \in x(y + z)$

$\langle 3 \rangle 4$. CASE: $q = q_1 q_2$ where $0 \leq q_1 \in x$ and $0 \leq q_2 \in y$ and $r < 0$

PROOF: Similar.

$\langle 3 \rangle 5$. CASE: $q = q_1 q_2$ where $0 \leq q_1 \in x$ and $0 \leq q_2 \in y$ and $r = r_1 r_2$ where $0 \leq r_1 \in x$ and $0 \leq r_2 \in z$

$\langle 4 \rangle 1$. ASSUME: w.l.o.g. $q_1 \leq r_1$

$\langle 4 \rangle 2$. $q + r \leq r_1(q_2 + r_2) \in x(y + z)$

$\langle 1 \rangle 2$. For any negative real x and non-negative reals y and z , we have $x(y + z) = xy + xz$

PROOF:

$$\begin{aligned} x(y + z) &= -(-x)(y + z) = -((-x)y + (-x)z) & (\langle 1 \rangle 1) \\ &= -((-x)y) - ((-x)z) \\ &= xy + xz \end{aligned}$$

Chapter 14

Vector Spaces

14.1 Vector Spaces

Definition 14.1.1 (Vector Space). Let K be either \mathbb{R} or \mathbb{C} . A *vector space* over K is a triple $(V, +, \cdot)$ such that:

- V is a nonempty set, whose elements are called *vectors*;
- $+: V^2 \rightarrow V$
- $\cdot: K \times V \rightarrow V$

such that the following hold for all $u, v, w \in V$ and $\alpha, \beta \in K$:

1. $u + v = v + u$
2. $u + (v + w) = (u + v) + w$
3. For every $u, v \in V$ there exists $w \in V$ such that $u + w = v$
4. $\alpha(\beta v) = (\alpha\beta)v$
5. $(\alpha + \beta)v = \alpha v + \beta v$
6. $\alpha(u + v) = \alpha u + \alpha v$
7. $1v = v$

Elements of K are called *scalars*.

We write *real vector space* for 'vector space over \mathbb{R} ', and *complex vector space* for 'vector space over \mathbb{C} '.

Proposition 14.1.2. *Let K be either \mathbb{R} and \mathbb{C} . The set $\{0\}$ is a vector space over K under the unique functions $+: \{0\}^2 \rightarrow \{0\}$, $\cdot: K \times \{0\} \rightarrow \{0\}$.*

PROOF: Each axiom holds trivially because $x = y$ holds for all $x, y \in \{0\}$. \square

Proposition 14.1.3. *The set \mathbb{R} is a real vector space under real addition and real multiplication.*

PROOF: TODO — after we have proved these facts about \mathbb{R} . \square

Proposition 14.1.4. *The set \mathbb{C} is a real vector space under complex addition and complex multiplication.*

PROOF: TODO

Proposition 14.1.5. *The set \mathbb{C} is a complex vector space under complex addition and complex multiplication.*

PROOF: TODO

Proposition 14.1.6. *Let K be either \mathbb{R} or \mathbb{C} . Let $\{V_i\}_{i \in I}$ be a family of vector spaces over K . Then $\prod_{i \in I} V_i$ is a vector space over K under the operations given by*

$$\begin{aligned}\{x_i\}_{i \in I} + \{y_i\}_{i \in I} &= \{x_i + y_i\}_{i \in I} \\ \alpha \{x_i\}_{i \in I} &= \{\alpha x_i\}_{i \in I}\end{aligned}$$

PROOF: Each axiom follows from the corresponding axiom in V_i . \square

Corollary 14.1.6.1. *Let V be a vector space over K . For any set I , we have V^I is a vector space over K .*

Corollary 14.1.6.2. *Let $n \in \mathbb{Z}_+$. Then \mathbb{R}^n is a real vector space, and \mathbb{C}^n is both a real and a complex vector space, under*

$$\begin{aligned}(x_1, \dots, x_n) + (y_1, \dots, y_n) &= (x_1 + y_1, \dots, x_n + y_n) \\ \lambda(x_1, \dots, x_n) &= (\lambda x_1, \dots, \lambda x_n)\end{aligned}$$

Proposition 14.1.7. *Let V be a vector space over K . Then there exists a unique $0 \in V$ such that, for all $v \in V$, we have $v + 0 = v$.*

PROOF:

$\langle 1 \rangle$ 1. There exists $0 \in V$ such that $\forall v \in V. v + 0 = v$

$\langle 2 \rangle$ 1. Pick $v \in V$

$\langle 2 \rangle$ 2. Pick $0 \in V$ such that $v + 0 = v$

PROOF: Axiom 3.

$\langle 2 \rangle$ 3. For all $u \in V$, we have $u + 0 = u$

$\langle 3 \rangle$ 1. LET: $u \in V$

$\langle 3 \rangle$ 2. PICK $u' \in V$ such that $v + u' = u$

PROOF: Axiom 3.

$\langle 3 \rangle$ 3. $u + 0 = u$

$$\begin{aligned}u + 0 &= v + u' + 0 && (\langle 3 \rangle 2) \\ &= v + u' && (\langle 2 \rangle 2) \\ &= u && (\langle 3 \rangle 2)\end{aligned}$$

$\langle 1 \rangle 2$. If $0, 0' \in V$ are such that $\forall v \in V. v + 0 = v$ and $\forall v \in V. v + 0' = v$, then $0 = 0'$.

$\langle 2 \rangle 1$. LET: $0, 0' \in V$

$\langle 2 \rangle 2$. ASSUME: $\forall v \in V. v + 0 = v$

$\langle 2 \rangle 3$. ASSUME: $\forall v \in V. v + 0' = v$

$\langle 2 \rangle 4$. $0 = 0'$

$$0 = 0 + 0' \quad (\langle 2 \rangle 2)$$

$$= 0' \quad (\langle 2 \rangle 3)$$

□

Proposition 14.1.8. *Let V be a vector space. For any $v \in V$, there exists a unique $-v \in V$ such that $v + (-v) = 0$.*

PROOF:

$\langle 1 \rangle 1$. LET: $v \in V$

$\langle 1 \rangle 2$. There exists $-v \in V$ such that $v + (-v) = u$

PROOF: Axiom 3.

$\langle 1 \rangle 3$. If $v + x = 0$ and $v + y = 0$ then $x = y$

14.2 Subspaces

Definition 14.2.1 (Subspace). Let V be a vector space over K and $U \subseteq V$. Then U is a *subspace* of V iff $\forall \alpha, \beta \in K. \forall u, v \in U. \alpha u + \beta v \in U$. It is a *proper* subspace iff in addition $U \neq V$.

Proposition 14.2.2. *Let V be a vector space over K and U a subspace of V . Then U is a vector space over K under the restrictions of the operations of V .*

PROOF: Each of the axioms follows from the corresponding axiom in V . For axiom 3, we have if $u, v \in U$ then $v - u = 1v + (-1)u \in U$. □

Proposition 14.2.3. *Every vector space is a subspace of itself.*

PROOF: Trivial. □

Proposition 14.2.4. *Let Ω be a subset of \mathbb{R}^N . Let $\mathcal{C}(\Omega)$ be the set of all continuous functions $\Omega \rightarrow \mathbb{C}$. Then $\mathcal{C}(\Omega)$ is a subspace of \mathbb{C}^Ω .*

PROOF: If $f, g : \Omega \rightarrow \mathbb{C}$ are continuous then so is $\alpha f + \beta g$. □

Proposition 14.2.5. *Let Ω be an open set in \mathbb{R}^N . Let $\mathcal{C}^k(\Omega)$ be the set of all continuous functions $\Omega \rightarrow \mathbb{C}$ with continuous partial derivatives of order k . Then $\mathcal{C}^k(\Omega)$ is a subspace of \mathbb{C}^Ω .*

PROOF: If $f, g : \Omega \rightarrow \mathbb{C}$ have continuous partial derivatives of order k then so does $\alpha f + \beta g$. \square

Proposition 14.2.6. *Let Ω be an open set in \mathbb{R}^N . Let $\mathcal{C}^\infty(\Omega)$ be the set of all infinitely differentiable functions $\Omega \rightarrow \mathbb{C}$. Then $\mathcal{C}^\infty(\Omega)$ is a subspace of \mathbb{C}^Ω .*

PROOF: If $f, g : \Omega \rightarrow \mathbb{C}$ are infinitely differentiable then so is $\alpha f + \beta g$. \square

Proposition 14.2.7. *Let Ω be an open set in \mathbb{R}^N . Let $\mathcal{P}(\Omega)$ be the set of all polynomials in N variables considered as functions $\Omega \rightarrow \mathbb{C}$. Then $\mathcal{P}(\Omega)$ is a subspace of \mathbb{C}^Ω .*

PROOF: If $f, g : \Omega \rightarrow \mathbb{C}$ are polynomials in N variables then so is $\alpha f + \beta g$. \square

Proposition 14.2.8. *Let V be a vector space and U_1, U_2 subspaces of V . If $U_1 \subseteq U_2$ then U_1 is a subspace of U_2 .*

PROOF: Trivial. \square

Proposition 14.2.9. *Let V be a vector space over K . The intersection of a set of subspaces of V is a subspace of V .*

PROOF:

$\langle 1 \rangle 1$. LET: \mathcal{U} be a set of subspaces of V .

$\langle 1 \rangle 2$. LET: $u, v \in \bigcap \mathcal{U}$ and $\lambda, \mu \in K$

$\langle 1 \rangle 3$. $\lambda u + \mu v \in \bigcap \mathcal{U}$

$\langle 2 \rangle 1$. LET: $U \in \mathcal{U}$

$\langle 2 \rangle 2$. $u, v \in U$

PROOF: $\langle 1 \rangle 2, \langle 2 \rangle 1$.

$\langle 2 \rangle 3$. $\lambda u + \beta v \in U$

PROOF: $\langle 1 \rangle 1, \langle 1 \rangle 2, \langle 2 \rangle 1, \langle 2 \rangle 2$.

\square

Proposition 14.2.10. *The set of all bounded complex sequences is a proper subspace of $\mathbb{C}^\mathbb{N}$.*

PROOF: If (x_n) and (y_n) are bounded then so is $(\lambda x_n + \mu y_n)$. \square

Proposition 14.2.11. *The set of all convergent complex sequences is a proper subspace of the space of all bounded complex sequences.*

PROOF: If (x_n) and (y_n) converge then so does $(\lambda x_n + \mu y_n)$. \square

Proposition 14.2.12. *The set l^p of all sequences (x_n) in \mathbb{C} such that $\sum_n |x_n|^p < \infty$ is a subspace of $\mathbb{C}^\mathbb{N}$.*

PROOF: It is closed under addition by Proposition 13.0.2, and it is easy to see that it is closed under scalar multiplication. \square

14.3 Linear Independence and Bases

Definition 14.3.1 (Linear Combination). Let V be a vector space over K . Let $v, v_1, \dots, v_n \in V$. Then v is a *linear combination* of v_1, \dots, v_n iff there exist scalars $\lambda_1, \dots, \lambda_n \in K$ such that

$$v = \lambda_1 v_1 + \dots + \lambda_n v_n .$$

Definition 14.3.2 (Linearly Independent). Let V be a vector space over K . Let $A \subseteq V$. Then A is *linearly independent* iff, for all $\lambda_1, \dots, \lambda_n \in K$ and $v_1, \dots, v_n \in A$, if $\lambda_1 v_1 + \dots + \lambda_n v_n = 0$ then $\lambda_1 = \dots = \lambda_n = 0$.

Definition 14.3.3 (Span). Let V be a vector space over K and $A \subseteq V$. The *span* of A , or the subspace of V *spanned* by A , is the set of all linear combinations of vectors in A .

Proposition 14.3.4. Let V be a vector space over K and $A \subseteq V$. Then $\text{span } A$ is a subspace of V .

PROOF: Given $\alpha, \beta \in K$ and $\lambda_1 u_1 + \dots + \lambda_m u_m, \mu_1 v_1 + \dots + \mu_n v_n \in \text{span } A$, we have

$$\begin{aligned} & \alpha(\lambda_1 u_1 + \dots + \lambda_m u_m) + \beta(\mu_1 v_1 + \dots + \mu_n v_n) \\ &= \alpha\lambda_1 u_1 + \dots + \alpha\lambda_m u_m + \beta\mu_1 v_1 + \dots + \beta\mu_n v_n \\ &\in \text{span } A \end{aligned} \quad \square$$

Definition 14.3.5 (Basis). Let V be a vector space over K and $B \subseteq V$. Then B is a *basis* for V iff B is linearly independent and $\text{span } B = V$.

Definition 14.3.6 (Finite Dimensional). A vector space is *finite dimensional* iff there exists a finite basis; otherwise it is *infinite dimensional*.

Proposition 14.3.7. In a finite dimensional space, any two bases have the same size.

TODO

Definition 14.3.8 (Dimension). The *dimension* of a finite dimensional vector space V , $\dim V$, is the number of vectors in any basis.

Proposition 14.3.9. Let K be either \mathbb{R} or \mathbb{C} . Then K^n as a vector space over K has dimension n .

PROOF: The vectors with one component 1 and all other components 0 form a basis. \square

Proposition 14.3.10. As a real vector space, \mathbb{C}^n has dimension $2n$.

PROOF: The vectors with one component either 1 or i and all other components 0 form a basis. \square

Proposition 14.3.11. *Let Ω be a nonempty open set in \mathbb{R}^n . The space $\mathcal{C}(\Omega)$ is infinite dimensional.*

PROOF: Let $\pi_1 : \mathbb{R}^n \rightarrow \mathbb{R}$ be the first projection. The functions $1, \pi_1(x), \pi_1(x)^2, \pi_1(x)^3, \dots$ form an infinite linearly independent set in $\mathcal{C}(\Omega)$. \square

Proposition 14.3.12. *The spaces $\mathcal{C}^k(\mathbb{R}^n)$ and $\mathcal{C}^\infty(\mathbb{R}^n)$ are infinite dimensional.*

PROOF: The monomials $1, x, x^2, \dots$ form an infinite linearly independent set. \square

14.4 Linear Mappings

Definition 14.4.1 (Kernel). Let U and V be vector spaces and $T : U \rightarrow V$. The *kernel* of T is

$$\ker T := \{u \in U \mid T(u) = 0\} .$$

Definition 14.4.2 (Linear Mapping). Let U and V be vector spaces over K . A function $L : U \rightarrow V$ is a *linear mapping* iff $\forall x, y \in U. \forall \alpha, \beta \in K. L(\alpha x + \beta y) = \alpha L(x) + \beta L(y)$.

Proposition 14.4.3. *Let U and V be vector spaces over K . The set of linear mappings from U to V is a subspace of V^U .*

14.5 Eigenvalues and Eigenvectors

Definition 14.5.1 (Eigenvalue and Eigenvector). Let V be a vector space over K . Let $A : V \rightarrow V$ be a linear transformation. Let $v \in V$ and $\lambda \in K$. Then v is an *eigenvector* of A with *eigenvalue* λ iff $A(v) = \lambda v$.

Chapter 15

Normed Spaces

Definition 15.0.1 (Norm). Let K be either \mathbb{R} or \mathbb{C} . Let V be a vector space over K . A *norm* on V is a function $\| \cdot \| : V \rightarrow \mathbb{R}$ such that, for all $u, v \in V$ and $\lambda \in K$:

1. If $\|v\| = 0$ then $v = 0$.
2. $\|\lambda v\| = |\lambda| \|v\|$
3. (*Triangle Inequality*) $\|u + v\| \leq \|u\| + \|v\|$

A *normed space* over K is a pair $(V, \| \cdot \|)$ where V is a vector space over K and $\| \cdot \|$ is a norm on V .

Proposition 15.0.2. *In a normed space, $\|0\| = 0$.*

PROOF: $\|0\| = |0| \|0\| = 0$ by Axiom 2. \square

Proposition 15.0.3. *Let V be a normed vector space over K . For all $v \in V$ we have $\|v\| \geq 0$.*

PROOF:

$$\begin{aligned} 0 &= \|0\| && \text{(Proposition 15.0.2)} \\ &= \|v - v\| \\ &\leq \|v\| + \|-v\| && \text{(Triangle Inequality)} \\ &= 2\|v\| && \text{(Axiom 2)} \end{aligned}$$

Proposition 15.0.4. *Let V be a normed space. Let $u, v \in V$. Then*

$$|\|u\| - \|v\|| \leq \|u - v\| .$$

PROOF:

$$\begin{aligned}
 \|u\| &\leq \|u - v\| + \|v\| && \text{(Triangle Inequality)} \\
 \therefore \|u\| - \|v\| &\leq \|u - v\| \\
 \|v\| &\leq \|v - u\| + \|u\| && \text{(Triangle Inequality)} \\
 &= \|u - v\| + \|u\| && \text{(Axiom 2)} \\
 \therefore \|v\| - \|u\| &\leq \|u - v\|
 \end{aligned}$$

Definition 15.0.5 (Euclidean Norm). The *Euclidean norm* on K^n is defined by

$$\|(x_1, \dots, x_n)\| = \sqrt{|x_1|^2 + \dots + |x_n|^2}.$$

Proposition 15.0.6. The Euclidean norm on K^n is a norm.

PROOF:

$\langle 1 \rangle 1$. If $\|\vec{x}\| = 0$ then $\vec{x} = \vec{0}$

PROOF: If $\sqrt{|x_1|^2 + \dots + |x_n|^2} = 0$ then $x_1 = \dots = x_n = 0$.

$\langle 1 \rangle 2$. $\|\lambda \vec{x}\| = |\lambda| \|\vec{x}\|$

PROOF:

$$\begin{aligned}
 \|\lambda \vec{x}\| &= \sqrt{|\lambda x_1|^2 + \dots + |\lambda x_n|^2} \\
 &= \sqrt{|\lambda|^2 |x_1|^2 + \dots + |\lambda|^2 |x_n|^2} \\
 &= |\lambda| \sqrt{|x_1|^2 + \dots + |x_n|^2} \\
 &= |\lambda| \|\vec{x}\|
 \end{aligned}$$

$\langle 1 \rangle 3$. $\|\vec{u} + \vec{v}\| \leq \|\vec{u}\| + \|\vec{v}\|$

PROOF:

$$\begin{aligned}
 \|\vec{u} + \vec{v}\|^2 &= |u_1 + v_1|^2 + \dots + |u_n + v_n|^2 \\
 &= |u_1|^2 + \dots + |u_n|^2 + |v_1|^2 + \dots + |v_n|^2 \\
 &\quad + 2|u_1||v_1| + \dots + 2|u_n||v_n| \\
 &\leq \|\vec{u}\|^2 + \|\vec{v}\|^2 + 2|u_1 v_1 + \dots + u_n v_n| \\
 &\leq \|\vec{u}\|^2 + \|\vec{v}\|^2 + 2\|\vec{u}\|\|\vec{v}\| && \text{(Cauchy-Schwarz)} \\
 &= (\|\vec{u}\| + \|\vec{v}\|)^2
 \end{aligned}$$

□

Corollary 15.0.6.1. The absolute value function $|\cdot|$ is a norm on K .

Proposition 15.0.7. The function $\|\vec{x}\| = |x_1| + \dots + |x_n|$ is a norm on \mathbb{C}^n .

PROOF:

$\langle 1 \rangle 1$. If $\|\vec{x}\| = 0$ then $\vec{x} = \vec{0}$

PROOF: If $|x_1| + \dots + |x_n| = 0$ then $x_1 = \dots = x_n = 0$.

$\langle 1 \rangle 2$. $\|\lambda \vec{x}\| = |\lambda| \|\vec{x}\|$

PROOF:

$$\begin{aligned}
 \|\lambda \vec{x}\| &= |\lambda x_1| + \cdots + |\lambda x_n| \\
 &= |\lambda|(|x_1| + \cdots + |x_n|) \\
 &= |\lambda| \|\vec{x}\|
 \end{aligned}$$

$$\langle 1 \rangle 3. \|\vec{u} + \vec{v}\| \leq \|\vec{u}\| + \|\vec{v}\|$$

PROOF:

$$\begin{aligned}
 \|\vec{u} + \vec{v}\|^2 &= |u_1 + v_1|^2 + \cdots + |u_n + v_n|^2 \\
 &\leq |u_1|^2 + |v_1|^2 + \cdots + |u_n|^2 + |v_n|^2 \\
 &= \|\vec{u}\|^2 + \|\vec{v}\|^2
 \end{aligned}$$

□

Proposition 15.0.8. *The function $\|\vec{x}\| = \max(|x_1|, \dots, |x_n|)$ is a norm on \mathbb{C}^n .*

PROOF:

$$\langle 1 \rangle 1. \text{ If } \|\vec{x}\| = 0 \text{ then } \vec{x} = \vec{0}$$

PROOF: If $\max(|x_1|, \dots, |x_n|) = 0$ then $x_1 = \cdots = x_n = 0$.

$$\langle 1 \rangle 2. \|\lambda \vec{x}\| = |\lambda| \|\vec{x}\|$$

PROOF:

$$\begin{aligned}
 \|\lambda \vec{x}\| &= \max(|\lambda x_1|, \dots, |\lambda x_n|) \\
 &= |\lambda| \max(|x_1|, \dots, |x_n|) \\
 &= |\lambda| \|\vec{x}\|
 \end{aligned}$$

$$\langle 1 \rangle 3. \|\vec{u} + \vec{v}\| \leq \|\vec{u}\| + \|\vec{v}\|$$

PROOF:

$$\begin{aligned}
 \|\vec{u} + \vec{v}\| &= \max(|u_1 + v_1|, \dots, |u_n + v_n|) \\
 &\leq \max(|u_1| + |v_1|, \dots, |u_n| + |v_n|) \\
 &\leq \max(|u_1|, \dots, |u_n|) + \max(|v_1|, \dots, |v_n|)
 \end{aligned}$$

□

Definition 15.0.9 (Uniform Convergence Norm). Let Ω be a closed bounded subset of \mathbb{R}^n . The *uniform convergence norm* on $\mathcal{C}(\Omega)$ is the function defined by $\|f\| = \max_{x \in \Omega} |f(x)|$.

Proposition 15.0.10. *Let Ω be a closed bounded subset of \mathbb{R}^n . The uniform convergence norm is a norm on $\mathcal{C}(\Omega)$.*

PROOF:

$$\langle 1 \rangle 1. \text{ If } \|f\| = 0 \text{ then } f = 0$$

PROOF: If $\max_x |f(x)| = 0$ then $f(x) = 0$ for all x .

$$\langle 1 \rangle 2. \|\lambda f\| = |\lambda| \|f\|$$

PROOF:

$$\begin{aligned}
 \|\lambda f\| &= \max_x |\lambda f(x)| \\
 &= |\lambda| \max_x |f(x)| \\
 &= |\lambda| \|f\|
 \end{aligned}$$

⟨1⟩3. $\|f + g\| \leq \|f\| + \|g\|$

PROOF:

$$\begin{aligned}\|f + g\| &= \max_x |f(x) + g(x)| \\ &\leq \max_x (|f(x)| + |g(x)|) \\ &\leq \max_x |f(x)| + \max_x |g(x)| \\ &= \|f\| + \|g\|\end{aligned}$$

□

Proposition 15.0.11. *Let $p \geq 1$. The function $\|(z_n)\| = (\sum_{n=1}^{\infty} |z_n|^p)^{1/p}$ is a norm on l^p .*

PROOF:

⟨1⟩1. If $\|(z_n)\| = 0$ then $(z_n) = (0)$

PROOF: If $(\sum_n |z_n|^p)^{1/p} = 0$ then $\sum_n |z_n|^p = 0$ so $|z_n|^p = 0$ for all n , and so $z_n = 0$ for all n .

⟨1⟩2. $\|(\lambda z_n)\| = |\lambda| \|(z_n)\|$

PROOF:

$$\begin{aligned}\|(\lambda z_n)\| &= \left(\sum_n |\lambda z_n|^p \right)^{1/p} \\ &= |\lambda| \left(\sum_n |z_n|^p \right)^{1/p} \\ &= |\lambda| \|(z_n)\|\end{aligned}$$

⟨1⟩3. The triangle inequality holds.

PROOF: This is Minkowski's Inequality. □

Proposition 15.0.12. *Let V be a normed space and U a vector subspace of V . Then U is a normed space under the restriction of the norm to U .*

PROOF: Each axiom follows from the fact it holds in V . □

Proposition 15.0.13. *Let V be a normed space over K . Let x_1, \dots, x_n be linearly independent elements of V . Then there exists a real number $c > 0$ such that, for all $\alpha_1, \dots, \alpha_n \in K$, we have*

$$\|\alpha_1 x_1 + \dots + \alpha_n x_n\| \geq c(|\alpha_1| + \dots + |\alpha_n|) .$$

PROOF:

⟨1⟩1. Define $f : K^n \rightarrow \mathbb{R}$ by

$$f(\alpha_1, \dots, \alpha_n) = \|\alpha_1 x_1 + \dots + \alpha_n x_n\|$$

⟨1⟩2. f is continuous.

⟨2⟩1. LET: $(\alpha_1, \dots, \alpha_n) \in K^n$ and $\epsilon > 0$

⟨2⟩2. LET: $\delta = \epsilon / (\|x_1\| + \dots + \|x_n\|)$

PROOF: x_1, \dots, x_n are not all zero because they are linearly independent.

⟨2⟩3. LET: $(\beta_1, \dots, \beta_n)$ with $|\alpha_i - \beta_i| < \delta$ for all i

$$\langle 2 \rangle 4. \quad \|(\alpha_1 x_1 + \cdots + \alpha_n x_n) - (\beta_1 x_1 + \beta_n x_n)\| < \epsilon$$

PROOF:

$$\|(\alpha_1 x_1 + \cdots + \alpha_n x_n) - (\beta_1 x_1 + \beta_n x_n)\|$$

$$\leq |\alpha_1 - \beta_1| \|x_1\| + \cdots + |\alpha_n - \beta_n| \|x_n\| \quad (\text{Axioms 2 and 3})$$

$$< \delta(\|x_1\| + \cdots + \|x_n\|) \quad (\langle 2 \rangle 3)$$

$$= \epsilon \quad (\langle 2 \rangle 2)$$

$\langle 1 \rangle 3.$ PICK $(\beta_1, \dots, \beta_n) \in \{(\beta_1, \dots, \beta_n) \in K^n \mid |\beta_1| + \cdots + |\beta_n| = 1\}$ at which f attains its minimum.

PROOF: Extreme Value Theorem.

$\langle 1 \rangle 4.$ Let $c = f(\beta_1, \dots, \beta_n)$

$\langle 1 \rangle 5.$ $c > 0$

PROOF: Linear independence.

$\langle 1 \rangle 6.$ LET: $\alpha_1, \dots, \alpha_n \in K$

$\langle 1 \rangle 7.$ $\|\alpha_1 x_1 + \cdots + \alpha_n x_n\| \geq c(|\alpha_1| + \cdots + |\alpha_n|)$

$\langle 2 \rangle 1.$ ASSUME: w.l.o.g. $\alpha_1, \dots, \alpha_n$ are not all zero.

$\langle 2 \rangle 2.$ LET: $\beta_i = \alpha_i / (|\alpha_1| + \cdots + |\alpha_n|)$ for $i = 1, \dots, n$

$\langle 2 \rangle 3.$ $|\beta_1| + \cdots + |\beta_n| = 1$

$\langle 2 \rangle 4.$ $f(\beta_1, \dots, \beta_n) \geq c$

$\langle 2 \rangle 5.$ Q.E.D.

PROOF: Multiply both sides by $|\alpha_1| + \cdots + |\alpha_n|$.

□

Proposition 15.0.14. Let V be a normed space over K . Define $d : V^2 \rightarrow \mathbb{R}$ by $d(x, y) = \|x - y\|$. Then d is a metric on V .

PROOF:

$\langle 1 \rangle 1.$ For all $x, y \in V$ we have $d(x, y) \geq 0$

PROOF: Proposition 15.0.3.

$\langle 1 \rangle 2.$ For all $x, y \in V$ we have $d(x, y) = 0$ iff $x = y$

$\langle 2 \rangle 1.$ If $d(x, y) = 0$ then $x = y$

PROOF: Axiom 1.

$\langle 2 \rangle 2.$ If $x = y$ then $d(x, y) = 0$

PROOF: Proposition 15.0.2.

$\langle 1 \rangle 3.$ $\forall x, y \in V. d(x, y) = d(y, x)$

PROOF: By Axiom 2.

$\langle 1 \rangle 4.$ $\forall x, y, z \in V. d(x, z) \leq d(x, y) + d(y, z)$

PROOF: By Axiom 3.

□

Henceforth we identify any normed space with this metric space.

15.1 Convergence

Proposition 15.1.1. Let V be a normed space over K . Let (x_n) be a sequence in V and $l \in V$. Then $x_n \rightarrow l$ as $n \rightarrow \infty$ in V if and only if $\|x_n - l\| \rightarrow 0$ as $n \rightarrow \infty$ in \mathbb{R} .

PROOF: Immediate from definitions. \square

Proposition 15.1.2. *In a normed space, a sequence has at most one limit.*

PROOF:

$\langle 1 \rangle 1$. LET: V be a vector space over K .

$\langle 1 \rangle 2$. ASSUME: $x_n \rightarrow l$ and $x_n \rightarrow m$ as $n \rightarrow \infty$.

$\langle 1 \rangle 3$. ASSUME: for a contradiction $l \neq m$

$\langle 1 \rangle 4$. LET: $\epsilon = \|l - m\|/2$

$\langle 1 \rangle 5$. PICK N such that $\forall n \geq N, \|x_n - l\| < \epsilon$ and $\forall n \geq N, \|x_n - m\| < \epsilon$

PROOF: $\langle 1 \rangle 2, \langle 1 \rangle 4$

$\langle 1 \rangle 6$. $\|l - m\| < \|l - m\|$

PROOF:

$$\begin{aligned} \|l - m\| &\leq \|x_N - l\| + \|x_N - m\| && \text{(Triangle Inequality)} \\ &< 2\epsilon && (\langle 1 \rangle 5) \\ &= \|l - m\| && (\langle 1 \rangle 4) \end{aligned}$$

$\langle 1 \rangle 7$. Q.E.D.

PROOF: This is a contradiction.

\square

Definition 15.1.3 (Bounded). Let V be a normed space over K . A sequence (x_n) in V is *bounded* iff there exists B such that $\forall n, \|x_n\| < B$.

Proposition 15.1.4. *Every convergent sequence is bounded.*

PROOF:

$\langle 1 \rangle 1$. LET: $x_n \rightarrow l$ as $n \rightarrow \infty$

$\langle 1 \rangle 2$. PICK N such that $\forall n \geq N, \|x_n - l\| < 1$

$\langle 1 \rangle 3$. LET: $B = \max(\|x_1\|, \|x_2\|, \dots, \|x_{N-1}\|, \|l\| + 1)$

$\langle 1 \rangle 4$. LET: $n \in \mathbb{N}$

$\langle 1 \rangle 5$. $\|x_n\| \leq B$

$\langle 2 \rangle 1$. CASE: $n < N$

PROOF: $\|x_n\| \leq B$ from $\langle 1 \rangle 3$.

$\langle 2 \rangle 2$. CASE: $n \geq N$

PROOF:

$$\begin{aligned} \|x_n\| &\leq \|l\| + \|x_n - l\| && \text{(Triangle Inequality)} \\ &< \|l\| + 1 && (\langle 1 \rangle 2) \\ &\leq B && (\langle 1 \rangle 3) \end{aligned}$$

\square

Proposition 15.1.5. *Let V be a normed space over K . If $x_n \rightarrow l$ as $n \rightarrow \infty$ in V , and $\lambda_n \rightarrow \lambda$ as $n \rightarrow \infty$ in K , then $\lambda_n x_n \rightarrow \lambda l$ as $n \rightarrow \infty$.*

PROOF:

$\langle 1 \rangle 1$. LET: V be a normed space over K .

$\langle 1 \rangle 2$. LET: $x_n \rightarrow l$ as $n \rightarrow \infty$

$\langle 1 \rangle 3$. LET: $\lambda_n \rightarrow \lambda$ as $n \rightarrow \infty$

- (1)4. LET: $\epsilon > 0$
 (1)5. PICK N such that, for all $n \geq N$, we have $\|x_n - l\| < \epsilon/2|\lambda|$ and $|\lambda_n - \lambda| < \sqrt{\epsilon/2}$ and $\|x_n\| < \sqrt{\epsilon/2}$
 (1)6. LET: $n \geq N$
 (1)7. $\|\lambda_n x_n - \lambda l\| < \epsilon$

PROOF:

$$\begin{aligned}
 \|\lambda_n x_n - \lambda l\| &\leq \|\lambda_n x_n - \lambda x_n\| + \|\lambda x_n - \lambda l\| && \text{(Triangle Inequality)} \\
 &= |\lambda_n - \lambda| \|x_n\| + |\lambda| \|x_n - l\| && \text{(Axiom 2)} \\
 &< \sqrt{\epsilon/2} \sqrt{\epsilon/2} + |\lambda| \epsilon/2 |\lambda| && ((1)5) \\
 &= \epsilon
 \end{aligned}$$

Proposition 15.1.6. *Let V be a normed space over K . If $x_n \rightarrow l$ and $y_n \rightarrow m$ as $n \rightarrow \infty$, then $x_n + y_n \rightarrow l + m$ as $n \rightarrow \infty$.*

PROOF:

- (1)1. LET: $\epsilon > 0$
 (1)2. PICK N such that, for all $n \geq N$, we have $\|x_n - l\| < \epsilon/2$ and $\|y_n - m\| < \epsilon/2$
 (1)3. LET: $n \geq N$
 (1)4. $\|(x_n + y_n) - (l + m)\| < \epsilon$

PROOF:

$$\begin{aligned}
 \|(x_n + y_n) - (l + m)\| &\leq \|x_n - l\| + \|y_n - m\| && \text{(Triangle Inequality)} \\
 &< \epsilon/2 + \epsilon/2 && ((1)2) \\
 &= \epsilon
 \end{aligned}$$

□

Definition 15.1.7 (Uniform Convergence). Let Ω be a closed bounded subset of \mathbb{R}^n . Let (f_n) be a sequence in $\mathcal{C}(\Omega)$ and $f \in \mathcal{C}(\Omega)$. Then (f_n) *converges uniformly* to f iff, for every $\epsilon > 0$, there exists N such that $\forall x \in \Omega. \forall n \geq N. |f_n(x) - f(x)| < \epsilon$.

Proposition 15.1.8. *Let Ω be a closed bounded subset of \mathbb{R}^n . Let (f_n) be a sequence in $\mathcal{C}(\Omega)$ and $f \in \mathcal{C}(\Omega)$. Then (f_n) converges uniformly to f iff f_n converges to f under the uniform convergence norm.*

PROOF:

$$\begin{aligned}
 &(f_n) \text{ converges to } f \text{ under the uniform convergence norm} \\
 &\Leftrightarrow \forall \epsilon > 0. \exists N. \forall n \geq N. \|f_n - f\| < \epsilon \\
 &\Leftrightarrow \forall \epsilon > 0. \exists N. \forall n \geq N. \forall x \in X. |f_n(x) - f(x)| < \epsilon
 \end{aligned}$$

□

Definition 15.1.9 (Pointwise Convergence). Let (f_n) be a sequence in $\mathcal{C}([0, 1])$ and $f \in \mathcal{C}([0, 1])$. Then (f_n) *converges pointwise* to f iff, for all $t \in [0, 1]$, we have $|f_n(t) - f(t)| \rightarrow 0$ as $n \rightarrow \infty$.

Proposition 15.1.10. *There is no norm n on $\mathcal{C}([0, 1])$ such that, for every sequence (f_n) and function f in $\mathcal{C}([0, 1])$, we have (f_n) converges pointwise to f if and only if (f_n) converges to f under n .*

PROOF:

(1)1. ASSUME: for a contradiction $\| \cdot \|$ is a norm on $\mathcal{C}([0, 1])$ such that, for every sequence (f_n) and function f in $\mathcal{C}([0, 1])$, we have (f_n) converges pointwise to f if and only if (f_n) converges to f under $\| \cdot \|$.

(1)2. For $n \in \mathbb{Z}_+$, define $g_n \in \mathcal{C}([0, 1])$ by

$$g_n(t) = \begin{cases} 2^n t & \text{if } 0 \leq t \leq 2^{-n} \\ 2 - 2^n t & \text{if } 2^{-n} \leq t \leq 2^{1-n} \\ 0 & \text{if } 2^{1-n} \leq t \leq 1 \end{cases}$$

(1)3. For all n , $\|g_n\| \neq 0$

PROOF: Axiom 1.

(1)4. For $n \in \mathbb{Z}_+$, define $f_n \in \mathcal{C}([0, 1])$ by $f_n = g_n / \|g_n\|$

(1)5. For all n , $\|f_n\| = 1$

PROOF: Axiom 2.

(1)6. (f_n) does not converge under $\| \cdot \|$

(1)7. (f_n) converges pointwise to 0.

(1)8. This is a contradiction.

□

Definition 15.1.11 (Equivalence of Norms). Let $\| \cdot \|_1$ and $\| \cdot \|_2$ be two norms on the same vector space V . Then the norms are *equivalent* if and only if, for any sequence (x_n) in V and $l \in V$, we have that (x_n) converges to l under $\| \cdot \|_1$ if and only if (x_n) converges to l under $\| \cdot \|_2$.

Theorem 15.1.12. Let $\| \cdot \|_1$ and $\| \cdot \|_2$ be two norms on the same vector space E over K . Then $\| \cdot \|_1$ and $\| \cdot \|_2$ are equivalent if and only if there exist positive real numbers α and β such that, for all $x \in E$,

$$\alpha \|x\|_1 \leq \|x\|_2 \leq \beta \|x\|_1 .$$

PROOF:

(1)1. If $\| \cdot \|_1$ and $\| \cdot \|_2$ are equivalent then there exist positive real numbers α and β such that, for all $x \in E$, $\alpha \|x\|_1 \leq \|x\|_2 \leq \beta \|x\|_1$.

(2)1. ASSUME: $\| \cdot \|_1$ and $\| \cdot \|_2$ are equivalent.

(2)2. There exists $\alpha > 0$ such that, for all $x \in E$, we have $\alpha \|x\|_1 \leq \|x\|_2$

(3)1. ASSUME: for a contradiction there is no $\alpha > 0$ such that, for all $x \in E$, we have $\alpha \|x\|_1 \leq \|x\|_2$.

(3)2. For all $n \in \mathbb{Z}_+$, PICK $x_n \in E$ such that $1/n \|x_n\|_1 > \|x_n\|_2$

(3)3. For all $n \in \mathbb{Z}_+$,

LET:

$$y_n = \frac{1}{\sqrt{n}} \frac{x_n}{\|x_n\|_2}$$

(3)4. (y_n) converges to 0 under $\| \cdot \|_2$

(3)5. (y_n) converges to 0 under $\| \cdot \|_1$

(3)6. For all $n \in \mathbb{Z}_+$, we have $\|y_n\| > \sqrt{n}$

(3)7. This is a contradiction.

(2)3. There exists $\beta > 0$ such that, for all $x \in E$, we have $\|x\|_2 \leq \beta \|x\|_1$

PROOF: Similar.

- (1)2. If there exist positive real numbers α and β such that, for all $x \in E$,
 $\alpha\|x\|_1 \leq \|x\|_2 \leq \beta\|x\|_1$, then $\|\cdot\|_1$ and $\|\cdot\|_2$ are equivalent.
 (2)1. ASSUME: α and β are positive reals with $\forall x \in E. \alpha\|x\|_1 \leq \|x\|_2 \leq \beta\|x\|_1$.
 (2)2. Let (x_n) be a sequence in E and $l \in E$
 (2)3. If (x_n) converges to l under $\|\cdot\|_1$ then (x_n) converges to l under $\|\cdot\|_2$.
 (3)1. ASSUME: (x_n) converges to l under $\|\cdot\|_1$
 (3)2. LET: $\epsilon > 0$
 (3)3. PICK N such that $\forall n \geq N. \|x_n - l\|_1 < \epsilon/\beta$
 (3)4. $\forall n \geq N. \|x_n - l\|_2 < \epsilon$
 (2)4. If (x_n) converges to l under $\|\cdot\|_2$ then (x_n) converges to l under $\|\cdot\|_1$.
 PROOF: Similar.

□

Theorem 15.1.13. *Any two norms on a finite dimensional vector space are equivalent.*

PROOF:

- (1)1. LET: V be a finite dimensional vector space over K .
 (1)2. ASSUME: w.l.o.g. $\dim V > 0$
 (1)3. PICK a basis $\{e_1, \dots, e_n\}$ for V .
 (1)4. LET: $\|\cdot\|_0 : V \rightarrow \mathbb{R}$ be the function: $\|\alpha_1 e_1 + \dots + \alpha_n e_n\|_0 = |\alpha_1| + \dots + |\alpha_n|$.
 (1)5. $\|\cdot\|_0$ is a norm.
 (2)1. If $\|v\|_0 = 0$ then $v = 0$
 PROOF: If $|\alpha_1| + \dots + |\alpha_n| = 0$ then $\alpha_1 = \dots = \alpha_n = 0$ so $\alpha_1 e_1 + \dots + \alpha_n e_n = 0$.
 (2)2. $\|\lambda v\|_0 = |\lambda| \|v\|_0$
 PROOF:

$$\begin{aligned} \|\lambda(\alpha_1 e_1 + \dots + \alpha_n e_n)\|_0 &= \|\lambda \alpha_1 e_1 + \dots + \lambda \alpha_n e_n\|_0 \\ &= |\lambda \alpha_1| + \dots + |\lambda \alpha_n| & (\langle 1 \rangle 4) \\ &= |\lambda|(|\alpha_1| + \dots + |\alpha_n|) \\ &= |\lambda| \|\alpha_1 e_1 + \dots + \alpha_n e_n\|_0 & (\langle 1 \rangle 4) \end{aligned}$$

 (2)3. $\|u + v\|_0 \leq \|u\|_0 + \|v\|_0$
 PROOF:

$$\begin{aligned} \|(\alpha_1 e_1 + \dots + \alpha_n e_n) + (\beta_1 e_1 + \dots + \beta_n e_n)\| &= |\alpha_1 + \beta_1| + \dots + |\alpha_n + \beta_n| \\ &\leq |\alpha_1| + \dots + |\alpha_n| + |\beta_1| + \dots + |\beta_n| \\ &= \|\alpha_1 e_1 + \dots + \alpha_n e_n\|_0 + \|\beta_1 e_1 + \dots + \beta_n e_n\|_0 \end{aligned}$$

 (1)6. Any norm on V is equivalent to $\|\cdot\|_0$.
 (2)1. LET: $\|\cdot\|$ be any norm on V .
 (2)2. PICK $\alpha > 0$ such that, for all $\alpha_1, \dots, \alpha_n \in K$, we have $\|\alpha_1 e_1 + \dots + \alpha_n e_n\| \geq \alpha(|\alpha_1| + \dots + |\alpha_n|)$
 PROOF: Proposition 15.0.13, (2)1, (1)3.
 (2)3. LET: $\beta = \max(\|e_1\|, \dots, \|e_n\|)$
 (2)4. $\beta > 0$
 PROOF: e_1, \dots, e_n cannot all be zero by (1)3.

$\langle 2 \rangle 5$. For all $x \in V$ we have $\alpha \|x\|_0 \leq \|x\| \leq \beta \|x\|_0$

$\langle 3 \rangle 1$. LET: $x \in V$

$\langle 3 \rangle 2$. $\alpha \|x\|_0 \leq \|x\|$

PROOF: $\langle 1 \rangle 3$, $\langle 1 \rangle 4$, $\langle 2 \rangle 2$.

$\langle 3 \rangle 3$. $\|x\| \leq \beta \|x\|_0$

$\langle 4 \rangle 1$. LET: $x = \alpha_1 e_1 + \cdots + \alpha_n e_n$

$\langle 4 \rangle 2$. Q.E.D.

PROOF:

$$\|x\| = \|\alpha_1 e_1 + \cdots + \alpha_n e_n\| \quad (\langle 4 \rangle 1)$$

$$\leq |\alpha_1| \|e_1\| + \cdots + |\alpha_n| \|e_n\| \quad (\langle 2 \rangle 1)$$

$$\leq \beta(|\alpha_1| + \cdots + |\alpha_n|) \quad (\langle 2 \rangle 3)$$

$$= \beta \|x\|_0 \quad (\langle 1 \rangle 4)$$

$\langle 2 \rangle 6$. Q.E.D.

PROOF: Theorem 15.1.12, $\langle 1 \rangle 5$, $\langle 2 \rangle 1$, $\langle 2 \rangle 2$, $\langle 2 \rangle 4$, $\langle 2 \rangle 5$.

Theorem 15.1.47. Let V be a normed space over K . Let $S \subseteq V$. Then the following are equivalent.

1. S is dense.
2. For all $l \in V$, there exists a sequence (x_n) in S such that $x_n \rightarrow l$ as $n \rightarrow \infty$.
3. Every nonempty open subset of V intersects S .

PROOF:

⟨1⟩1. $1 \Leftrightarrow 2$

PROOF: Theorem 15.1.43.

⟨1⟩2. $1 \Rightarrow 3$

⟨2⟩1. ASSUME: S is dense.

⟨2⟩2. LET: U be a nonempty open subset of V .

⟨2⟩3. $X - U$ does not include S .

PROOF: Lest we have $\text{cl } S \subseteq X - U$.

$\langle 2 \rangle 4$. U intersects S .

$\langle 1 \rangle 3$. $3 \Rightarrow 1$

$\langle 2 \rangle 1$. ASSUME: Every nonempty subset of V intersects S .

$\langle 2 \rangle 2$. Every closed proper subset of V does not include S .

$\langle 2 \rangle 3$. $\text{cl } S = V$

□

Definition 15.1.48 (Compact). Let V be a normed space over K and $S \subseteq V$. Then S is *compact* if and only if every sequence in S has a convergent subsequence whose limit is in S .

Proposition 15.1.49. *In K^n , a set is compact if and only if it is bounded and closed.*

PROOF: TODO

Definition 15.1.50 (Bounded). Let V be a normed space over K and $S \subseteq V$. Then S is *bounded* iff there exists $r > 0$ such that $S \subseteq B(0, r)$.

Theorem 15.1.51. *Every compact set is closed and bounded.*

PROOF:

$\langle 1 \rangle 1$. LET: V be a normed space over K .

$\langle 1 \rangle 2$. LET: $S \subseteq V$ be compact.

$\langle 1 \rangle 3$. S is closed.

$\langle 2 \rangle 1$. LET: (x_n) be a sequence in S that converges to l

$\langle 2 \rangle 2$. PICK a sequence (x_{n_r}) that converges to $x \in S$

PROOF: $\langle 1 \rangle 2$, $\langle 2 \rangle 1$

$\langle 2 \rangle 3$. $x_{n_r} \rightarrow l$ as $n \rightarrow \infty$

PROOF: $\langle 2 \rangle 1$, $\langle 2 \rangle 2$

$\langle 2 \rangle 4$. $l = x$

PROOF: Proposition 15.1.2.

$\langle 2 \rangle 5$. $l \in S$

PROOF: $\langle 2 \rangle 2$, $\langle 2 \rangle 4$

$\langle 2 \rangle 6$. Q.E.D.

PROOF: Theorem 15.1.40.

$\langle 1 \rangle 4$. S is bounded.

$\langle 2 \rangle 1$. ASSUME: for a contradiction S is unbounded.

$\langle 2 \rangle 2$. For $n \in \mathbb{Z}_+$, PICK $x_n \in S - B(0, n)$

$\langle 2 \rangle 3$. PICK a convergent subsequence (x_{n_r}) that converges to l , say.

$\langle 2 \rangle 4$. PICK $N \in \mathbb{Z}_+$ such that $\|l\| < N$

$\langle 2 \rangle 5$. PICK r such that $n_r > N$ and $\|x_{n_r} - l\| < N - \|l\|$

$\langle 2 \rangle 6$. $\|x_{n_r}\| < N < n_r$

$\langle 2 \rangle 7$. This contradicts $\langle 2 \rangle 2$.

-

15.2 Continuous Linear Mappings

Definition 15.2.1 (Continuous). Let U and V be normed spaces. Let $f : U \rightarrow V$ and $x \in U$. Then f is *continuous at x* iff, for any sequence (x_n) in U , if $x_n \rightarrow x$ as $n \rightarrow \infty$ then $f(x_n) \rightarrow f(x)$ as $n \rightarrow \infty$. The function f is *continuous* iff f is continuous at every point.

Proposition 15.2.2. *Let V be a normed space. Then the norm is a continuous function $V \rightarrow \mathbb{R}$.*

PROOF: From Proposition 15.0.4. □

Proposition 15.2.3. *Let U and V be normed space. Let $f : U \rightarrow V$. Then the following are equivalent.*

1. f is continuous.
2. For any open set S in V , we have $f^{-1}(S)$ is open in U .

3. For any closed set C in V , we have $f^{-1}(C)$ is closed in U .

Proposition 15.2.4. *Let U and V be normed spaces over K . Let $T : U \rightarrow V$ be a linear transformation. If T is continuous at some point, then it is continuous.*

PROOF:

- $\langle 1 \rangle 1$. ASSUME: T is continuous at u_0
- $\langle 1 \rangle 2$. LET: $x_n \rightarrow l$ as $n \rightarrow \infty$ in U
- $\langle 1 \rangle 3$. $x_n - l + u_0 \rightarrow u_0$ as $n \rightarrow \infty$.
- $\langle 1 \rangle 4$. $T(x_n - l + u_0) \rightarrow T(u_0)$ as $n \rightarrow \infty$.
- $\langle 1 \rangle 5$. $T(x_n) - T(l) + T(u_0) \rightarrow T(u_0)$ as $n \rightarrow \infty$.
- $\langle 1 \rangle 6$. $T(x_n) \rightarrow T(l)$ as $n \rightarrow \infty$.

□

Definition 15.2.5 (Bounded). Let U and V be normed spaces over K . Let $T : U \rightarrow V$ be a linear transformation. Then T is *bounded* iff there exists $\alpha > 0$ such that, for all $x \in U$, we have $\|T(x)\| \leq \alpha\|x\|$.

Theorem 15.2.6. *Let U and V be normed spaces over K . Let $T : U \rightarrow V$ be a linear transformation. Then T is continuous if and only if it is bounded.*

PROOF:

- $\langle 1 \rangle 1$. If T is continuous then T is bounded.
- $\langle 2 \rangle 1$. ASSUME: T is not bounded.
- $\langle 2 \rangle 2$. For $n \in \mathbb{Z}_+$, PICK $x_n \in U$ such that $\|T(x_n)\| > n\|x_n\|$.
- $\langle 2 \rangle 3$. For $n \in \mathbb{Z}_+$,
LET:

$$y_n = \frac{x_n}{n\|x_n\|}$$

- $\langle 2 \rangle 4$. $y_n \rightarrow 0$ as $n \rightarrow \infty$
- $\langle 2 \rangle 5$. $T(y_n) \not\rightarrow 0$ as $n \rightarrow \infty$
- $\langle 2 \rangle 6$. T is not continuous.
- $\langle 1 \rangle 2$. If T is bounded then T is continuous.
- $\langle 2 \rangle 1$. ASSUME: T is bounded.
- $\langle 2 \rangle 2$. PICK $\alpha > 0$ such that $\forall x \in U, \|T(x)\| \leq \alpha\|x\|$.
- $\langle 2 \rangle 3$. T is continuous at 0.
- $\langle 3 \rangle 1$. LET: (x_n) be a sequence that converges to 0 in U
- $\langle 3 \rangle 2$. $T(x_n) \rightarrow 0$ as $n \rightarrow \infty$

PROOF:

$$\begin{aligned} \|T(x_n)\| &\leq \alpha\|x_n\| && (\langle 2 \rangle 2) \\ &\rightarrow 0 && \text{as } n \rightarrow \infty \end{aligned}$$

- $\langle 2 \rangle 4$. T is continuous.

PROOF: Proposition 15.2.4.

□

Proposition 15.2.7. *Let U and V be normed spaces over K where U is finite dimensional. Let $T : U \rightarrow V$ be a linear transformation. Then T is bounded.*

PROOF:

- ⟨1⟩1. PICK a basis $\{e_1, \dots, e_n\}$ of unit vectors for U .
 ⟨1⟩2. LET: $M = \max(\|T(e_1)\|, \dots, \|T(e_n)\|)$
 ⟨1⟩3. PICK $C > 0$ such that, for all $\alpha_1, \dots, \alpha_n \in K$, we have $|\alpha_1| + \dots + |\alpha_n| \leq C\|\alpha_1 e_1 + \dots + \alpha_n e_n\|$

15.3 Banach Spaces

Definition 15.3.1 (Cauchy Sequence). Let V be a normed space over K . A *Cauchy sequence* is a sequence of points (x_n) such that, for every $\epsilon > 0$, there exists N such that $\forall m, n \geq N. \|x_m - x_n\| < \epsilon$.

Theorem 15.3.2. Let V be a normed space over K . Let (x_n) be a sequence in V . The following are equivalent.

1. (x_n) is Cauchy.
2. For every pair of increasing sequences of positive integers (p_n) and (q_n) , we have $\|x_{p_n} - x_{q_n}\| \rightarrow 0$ as $n \rightarrow \infty$.
3. For every increasing sequence of positive integers (p_n) , we have $\|x_{p_n} - x_n\| \rightarrow 0$ as $n \rightarrow \infty$.

PROOF:

$\langle 1 \rangle 1. 1 \Rightarrow 2$

- $\langle 2 \rangle 1$. ASSUME: (x_n) is Cauchy.
- $\langle 2 \rangle 2$. LET: (p_n) and (q_n) are increasing sequences of positive integers.
- $\langle 2 \rangle 3$. LET: $\epsilon > 0$
- $\langle 2 \rangle 4$. PICK N such that $\forall m, n \geq N. \|x_m - x_n\| < \epsilon$
- $\langle 2 \rangle 5$. $\forall n \geq N. \|x_{p_n} - x_{q_n}\| < \epsilon$

PROOF: Since $p_n, q_n \geq n \geq N$.

$\langle 1 \rangle 2. 2 \Rightarrow 3$

PROOF: Trivial.

$\langle 1 \rangle 3. 2 \Rightarrow 1$

- $\langle 2 \rangle 1$. ASSUME: (x_n) is not Cauchy
- $\langle 2 \rangle 2$. Pick $\epsilon > 0$ such that, for every $N \in \mathbb{Z}_+$, there exist $m_N, n_N \geq N$ such that $\|x_{m_N} - x_{n_N}\| \geq \epsilon$
- $\langle 2 \rangle 3$. ASSUME: w.l.o.g. (m_N) and (n_N) are increasing sequences.
- $\langle 2 \rangle 4$. $\|x_{m_N} - x_{n_N}\| \not\rightarrow 0$ as $N \rightarrow \infty$.

$\langle 1 \rangle 4. 3 \Rightarrow 2$

- $\langle 2 \rangle 1$. ASSUME: 3
- $\langle 2 \rangle 2$. LET: (p_n) and (q_n) be increasing sequences of positive integers.
- $\langle 2 \rangle 3$. LET: $\epsilon > 0$
- $\langle 2 \rangle 4$. PICK N such that $\forall n \geq N. \|x_{p_n} - x_n\| < \epsilon/2$ and $\forall n \geq N. \|x_{q_n} - x_n\| < \epsilon/2$
- $\langle 2 \rangle 5$. $\forall n \geq N. \|x_{p_n} - x_{q_n}\| < \epsilon$

□

Proposition 15.3.3. Every convergent sequence is Cauchy.

PROOF:

- $\langle 1 \rangle 1$. LET: $x_n \rightarrow l$ as $n \rightarrow \infty$.
- $\langle 1 \rangle 2$. LET: $\epsilon > 0$
- $\langle 1 \rangle 3$. PICK N such that $\forall n \geq N. \|x_n - l\| < \epsilon/2$

(1)4. For all $m, n \geq N$ we have $\|x_m - x_n\| < \epsilon$.
 \square

Proposition 15.3.4. *In $\mathcal{P}([0, 1])$, let*

$$P_n(x) = 1 + x + \frac{x^2}{2} + \cdots + \frac{x^n}{n!} .$$

Then (P_n) is Cauchy but does not converge.

PROOF: It converges to e^x in $\mathcal{C}([0, 1])$, therefore it is Cauchy in $\mathcal{C}([0, 1])$, hence Cauchy in $\mathcal{P}([0, 1])$. Since $e^x \notin \mathcal{P}([0, 1])$, it does not converge in that space. \square

Proposition 15.3.5. *Let V be a normed space over K . Let (x_n) be a Cauchy sequence in V . Then $(\|x_n\|)$ converges in \mathbb{R} .*

PROOF:

(1)1. $(\|x_n\|)$ is Cauchy.

(2)1. LET: $\epsilon > 0$

(2)2. PICK N such that $\forall m, n \geq N. \|x_m - x_n\| < \epsilon$

(2)3. $\forall m, n \geq N. \|\|x_m\| - \|x_n\|\| < \epsilon$

PROOF: Proposition 15.0.4.

(1)2. Q.E.D.

PROOF: Since every Cauchy sequence in \mathbb{R} converges.

\square

Proposition 15.3.6. *Every Cauchy sequence is bounded.*

PROOF:

(1)1. LET: V be a normed space over K .

(1)2. LET: (x_n) be a Cauchy sequence in V .

(1)3. PICK N such that $\forall m, n \geq N. \|x_m - x_n\| < 1$.

(1)4. LET: $B = \max(\|x_1\|, \dots, \|x_{N-1}\|, \|x_N\|) + 1$

(1)5. $\forall n. \|x_n\| \leq B$

\square

Definition 15.3.7 (Banach Space). A normed space V over K is *complete* or a *Banach space* iff every Cauchy sequence converges.

Proposition 15.3.8. *l^2 is complete.*

PROOF:

(1)1. LET: (a_n) be a Cauchy sequence in l^2 where $a_n = (\alpha_{n1}, \alpha_{n2}, \dots)$.

(1)2. For all $\epsilon > 0$, there exists $n_0 \in \mathbb{Z}_+$ such that $\forall m, n \geq n_0. \sum_{k=1}^{\infty} |\alpha_{mk} - \alpha_{nk}|^2 < \epsilon^2$.

(1)3. For every $k \in \mathbb{Z}_+$ and $\epsilon > 0$, there exists $n_0 \in \mathbb{Z}_+$ such that $\forall m, n \geq n_0. |\alpha_{mk} - \alpha_{nk}| < \epsilon$.

(1)4. For every $k \in \mathbb{Z}_+$, (α_{nk}) is Cauchy in \mathbb{C} .

(1)5. For every $k \in \mathbb{Z}_+$, (α_{nk}) converges in \mathbb{C} .

(1)6. For $k \in \mathbb{Z}_+$,

- LET: $\alpha_k = \lim_{n \rightarrow \infty} \alpha_{nk}$
- $\langle 1 \rangle 7$. Let a be the sequence (α_k)
- $\langle 1 \rangle 8$. For all $\epsilon > 0$, there exists n_0 such that $\forall n \geq n_0. \sum_{k=1}^{\infty} |\alpha_k - \alpha_{nk}|^2 \leq \epsilon^2$.
- PROOF: Letting $m \rightarrow \infty$ in $\langle 1 \rangle 2$.
- $\langle 1 \rangle 9$. $a \in l^2$
- $\langle 2 \rangle 1$. PICK n_0 such that $\forall n \geq n_0. \sum_{k=1}^{\infty} |\alpha_k - \alpha_{nk}|^2 \leq 1$
- PROOF: $\langle 1 \rangle 8$
- $\langle 2 \rangle 2$. $(\alpha_k - \alpha_{n_0 k}) \in l^2$
- $\langle 2 \rangle 3$. $(\alpha_{n_0 k}) \in l^2$
- PROOF: By $\langle 1 \rangle 1$ since the sequence is a_{n_0} .
- $\langle 2 \rangle 4$. $(\alpha_k) \in l^2$
- PROOF: Proposition 13.0.2.
- $\langle 1 \rangle 10$. $a_n \rightarrow a$ as $n \rightarrow \infty$
- PROOF: By $\langle 1 \rangle 8$ since $\|a - a_n\| = \sqrt{\sum_{k=1}^{\infty} |\alpha_k - \alpha_{nk}|^2}$.
-

Proposition 15.3.9. *Let a and b be real numbers with $a < b$. The space $\mathcal{C}([a, b])$ is complete.*

PROOF:

- $\langle 1 \rangle 1$. LET: $X = [a, b]$
- $\langle 1 \rangle 2$. LET: (f_n) be a Cauchy sequence in $\mathcal{C}([a, b])$.
- $\langle 1 \rangle 3$. For all $\epsilon > 0$, there exists n_0 such that $\forall n, m \geq n_0. \|f_n - f_m\| < \epsilon$.
- $\langle 1 \rangle 4$. For all $\epsilon > 0$, there exists n_0 such that $\forall n, m \geq n_0. \forall x \in X. |f_n(x) - f_m(x)| < \epsilon$.
- $\langle 1 \rangle 5$. For all $x \in [a, b]$, $(f_n(x))$ is Cauchy.
- $\langle 1 \rangle 6$. Define $f : [a, b] \rightarrow \mathbb{C}$ by $f(x) = \lim_{n \rightarrow \infty} f_n(x)$.
- $\langle 1 \rangle 7$. For all $\epsilon > 0$, there exists n_0 such that $\forall n \geq n_0. \forall x \in X. |f_n(x) - f(x)| < \epsilon$
- PROOF: Letting $m \rightarrow \infty$ in $\langle 1 \rangle 4$.
- $\langle 1 \rangle 8$. f is continuous
- $\langle 2 \rangle 1$. LET: $x_0 \in X$
- $\langle 2 \rangle 2$. LET: $\epsilon > 0$
- $\langle 2 \rangle 3$. PICK n_0 such that $\forall n \geq n_0. \forall x \in X. |f_n(x) - f(x)| < \epsilon/3$
- PROOF: By $\langle 1 \rangle 7$.
- $\langle 2 \rangle 4$. PICK $\delta > 0$ such that $\forall x \in X. |x - x_0| < \delta \Rightarrow |f_{n_0}(x) - f_{n_0}(x_0)| < \epsilon/3$
- PROOF: Since f_{n_0} is continuous.
- $\langle 2 \rangle 5$. LET: $x \in X$
- $\langle 2 \rangle 6$. ASSUME: $|x - x_0| < \delta$
- $\langle 2 \rangle 7$. $|f(x) - f(x_0)| < \epsilon$
- PROOF:
- $$\begin{aligned}
 |f(x) - f(x_0)| &\leq |f(x) - f_{n_0}(x)| + |f_{n_0}(x) - f_{n_0}(x_0)| + |f_{n_0}(x_0) - f(x_0)| \quad (\text{Triangle Inequality}) \\
 &< \epsilon/3 + \epsilon/3 + \epsilon/3 \quad (\langle 2 \rangle 3, \langle 2 \rangle 4) \\
 &= \epsilon
 \end{aligned}$$
- $\langle 1 \rangle 9$. (f_n) converges to f uniformly.
- PROOF: From $\langle 1 \rangle 7$
-

Definition 15.3.10 (Series). Let V be a normed space over K . A *convergent series* in V is a sequence (x_n) in V such that $(x_1 + \cdots + x_n)$ is a convergent sequence, in which case we write $\sum_{n=1}^{\infty} x_n$ for its limit.

Definition 15.3.11 (Absolutely Convergent Series). Let V be a normed space over K . An *absolutely convergent series* in V is a sequence (x_n) such that $\sum_{n=1}^{\infty} \|x_n\| < \infty$.

Proposition 15.3.12. In $\mathcal{P}([0, 1])$, the series $\sum_{n=0}^{\infty} x^n/n!$ is absolutely convergent but not convergent.

PROOF: Proposition 15.3.4. \square

Theorem 15.3.13. A normed space is complete if and only if every absolutely convergent series is convergent.

PROOF:

$\langle 1 \rangle 1$. LET: V be a normed space over K .

$\langle 1 \rangle 2$. If V is complete then every absolutely convergent series is convergent.

$\langle 2 \rangle 1$. ASSUME: V is complete.

$\langle 2 \rangle 2$. LET: $\sum_{n=1}^{\infty} a_n$ be absolutely convergent in V .

$\langle 2 \rangle 3$. For $n \in \mathbb{Z}_+$,
LET: $s_n = \sum_{k=1}^n a_k$

$\langle 2 \rangle 4$. (s_n) is Cauchy.

$\langle 3 \rangle 1$. LET: $\epsilon > 0$

$\langle 3 \rangle 2$. PICK k such that $\sum_{n=k+1}^{\infty} \|a_n\| < \epsilon$

$\langle 3 \rangle 3$. LET: $m > n > k$

$\langle 3 \rangle 4$. $\|s_m - s_n\| < \epsilon$

PROOF:

$$\begin{aligned} \|s_m - s_n\| &= \left\| \sum_{i=n+1}^m a_i \right\| && (\langle 2 \rangle 3, \langle 3 \rangle 3) \\ &\leq \sum_{i=n+1}^m \|a_i\| && (\text{Triangle inequality}) \\ &\leq \sum_{i=k+1}^{\infty} \|a_i\| \\ &< \epsilon && (\langle 3 \rangle 2, \langle 3 \rangle 3) \end{aligned}$$

$\langle 2 \rangle 5$. (s_n) converges.

$\langle 1 \rangle 3$. If every absolutely convergent series is convergent then V is complete.

$\langle 2 \rangle 1$. ASSUME: Every absolutely convergent series in V is convergent.

$\langle 2 \rangle 2$. LET: (a_n) be a Cauchy sequence in V .

$\langle 2 \rangle 3$. PICK a strictly increasing sequence of positive integers (p_n) such that
 $\forall k. \forall m, n \geq p_k. \|x_m - x_n\| < 2^{-k}$.

$\langle 2 \rangle 4$. $\sum_{k=1}^{\infty} (x_{p_{k+1}} - x_{p_k})$ is absolutely convergent.

PROOF:

$$\sum_{k=1}^{\infty} \|x_{p_{k+1}} - x_{p_k}\| < \sum_{k=1}^{\infty} 2^{-k} \quad (\langle 2 \rangle 3)$$

$$< \infty$$

$\langle 2 \rangle 5$. $\sum_{k=1}^{\infty} (x_{p_{k+1}} - x_{p_k})$ is convergent.

PROOF: $\langle 2 \rangle 1$, $\langle 2 \rangle 5$

$\langle 2 \rangle 6$. LET: $s = \sum_{k=1}^{\infty} (x_{p_{k+1}} - x_{p_k})$

$\langle 2 \rangle 7$. $x_{p_k} \rightarrow s + x_{p_1}$ as $k \rightarrow \infty$.

$\langle 3 \rangle 1$. $\sum_{i=1}^k (x_{p_{i+1}} - x_{p_i}) \rightarrow s$ as $k \rightarrow \infty$

PROOF: $\langle 2 \rangle 6$

$\langle 3 \rangle 2$. $x_{p_{k+1}} - x_{p_1} \rightarrow s$ as $k \rightarrow \infty$

$\langle 2 \rangle 8$. $x_n \rightarrow s + x_{p_1}$ as $k \rightarrow \infty$.

PROOF:

$\langle 3 \rangle 1$. LET: $\epsilon > 0$

$\langle 3 \rangle 2$. PICK N such that $\forall k \geq N, \|x_{p_k} - (s + x_{p_1})\| < \epsilon/2$ and $\forall m, n \geq N, \|x_m - x_n\| < \epsilon/2$

PROOF: $\langle 2 \rangle 2$, $\langle 2 \rangle 7$

$\langle 3 \rangle 3$. $\forall n \geq N, \|x_n - (s + x_{p_1})\| < \epsilon$

□

Theorem 15.3.14. *A closed vector subspace of a Banach space is a Banach space.*

PROOF:

$\langle 1 \rangle 1$. LET: V be a Banach space over K .

$\langle 1 \rangle 2$. LET: U be a closed vector subspace of V .

$\langle 1 \rangle 3$. LET: (a_n) be a Cauchy sequence in U .

$\langle 1 \rangle 4$. (a_n) is a Cauchy sequence in V .

$\langle 1 \rangle 5$. LET: $l = \lim_{n \rightarrow \infty} a_n$

$\langle 1 \rangle 6$. $l \in U$

PROOF: Theorem 15.1.40.

$\langle 1 \rangle 7$. $a_n \rightarrow l$ as $n \rightarrow \infty$ in U .

□

Definition 15.3.15 (Completion). Let V be a normed space over K . A *completion* of V consists of a normed space W over K and an injection $\phi : V \rightarrow W$ such that:

$$1. \forall x, y \in V, \forall \alpha, \beta \in K, \phi(\alpha x + \beta y) = \alpha \phi(x) + \beta \phi(y)$$

$$2. \forall x \in V, \|\phi(x)\| = \|x\|$$

3. $\phi(V)$ is dense in W .

4. W is complete.

Proposition 15.3.16. *Every normed space has a completion.*

PROOF:

- (1)1. LET: V be a normed space over K .
 (1)2. Let us say two Cauchy sequences $(x_n), (y_n)$ are *equivalent* iff $x_n - y_n \rightarrow 0$ as $n \rightarrow \infty$.
 (1)3. Equivalence is an equivalence relation on the set of Cauchy sequences.
 (1)4. LET: W be the set of Cauchy sequences in V quotiented by equivalence.
 (1)5. Define addition and multiplication on W by

$$\begin{aligned}
 [(x_n)] + [(y_n)] &= [(x_n + y_n)] \\
 \lambda[(x_n)] &= [(\lambda x_n)]
 \end{aligned}$$

- (1)6. Define a norm on W by $\|[(x_n)]\| = \lim_{n \rightarrow \infty} \|x_n\|$
 (1)7. Define $\phi : V \rightarrow W$ by $\phi(v) = [(v)]$.
 (1)8. ϕ is injective.
 (1)9. $\forall x, y \in V. \forall \alpha, \beta \in K. \phi(\alpha x + \beta y) = \alpha \phi(x) + \beta \phi(y)$
 (1)10. $\forall x \in V. \|\phi(x)\| = \|x\|$
 (1)11. $\phi(V)$ is dense in W .

- (2)1. LET: $[(a_n)] \in W$ and $\epsilon > 0$.

PROVE: $B([(a_n)], \epsilon)$ intersects $\phi(V)$.

- (2)2. PICK N such that $\forall m, n \geq N. \|a_m - a_n\| < \epsilon/2$

- (2)3. $\phi(a_N) \in B([(a_n)], \epsilon)$

PROOF:

$$\begin{aligned}
 \|[(a_n)] - \phi(a_N)\| &= \lim_{n \rightarrow \infty} \|a_n - a_N\| \\
 &\leq \epsilon/2 & (\langle 2 \rangle 2) \\
 &< \epsilon
 \end{aligned}$$

- (1)12. W is complete.

- (2)1. LET: (X_n) be a Cauchy sequence in W .

- (2)2. For $n \in \mathbb{Z}_+$, PICK $x_n \in V$ such that

$$\|\phi(x_n) - X_n\| < 1/n.$$

- (2)3. (x_n) is Cauchy in V .

- (3)1. LET: $\epsilon > 0$

- (3)2. PICK N such that $\forall m, n \geq N. \|X_n - X_m\| < \epsilon/3$ and $1/N < \epsilon/3$

- (3)3. LET: $m, n \geq N$

- (3)4. $\|x_m - x_n\| < \epsilon$

PROOF:

$$\begin{aligned}
 \|x_m - x_n\| &= \|\phi(x_m) - \phi(x_n)\| \\
 &\leq \|\phi(x_m) - X_m\| + \|X_m - X_n\| + \|X_n - \phi(x_n)\| \\
 &< \|X_m - X_n\| + 1/m + 1/n \\
 &< \epsilon
 \end{aligned}$$

- (2)4. LET: $X = [(x_n)]$

- (2)5. $X_n \rightarrow X$ as $n \rightarrow \infty$

PROOF:

$$\begin{aligned}
 \|X_n - X\| &\leq \|X_n - \phi(x_n)\| + \|\phi(x_n) - X\| \\
 &< \|\phi(x_n) - X\| + 1/n \\
 &\rightarrow 0
 \end{aligned}$$

as $n \rightarrow \infty$

□

Proposition 15.3.17. *Let U be a normed space and V a Banach space. Then $\mathcal{B}(U, V)$ is a Banach space.*

PROOF:

$\langle 1 \rangle 1$. LET: (T_n) be a Cauchy sequence in $\mathcal{B}(U, V)$

$\langle 1 \rangle 2$. For all $u \in U$, $(T_n(u))$ is a Cauchy sequence in V .

$\langle 1 \rangle 5$. $T_n \rightarrow T$ as $n \rightarrow \infty$

$\langle 2 \rangle 1$. LET: $\epsilon > 0$

$\langle 2 \rangle 2$. PICK N such that $\forall m, n \geq N. \|T_m - T_n\| < \epsilon/2$

$\langle 2 \rangle 3$. LET: $n \geq N$

PROVE: $\|T_n - T\| < \epsilon$

$\langle 2 \rangle 4$. LET: $x \in U$ with $\|x\| = 1$

$\langle 2 \rangle 5$. $\|T_n(x) - T(x)\| \leq \epsilon/2$

PROOF: Let $n \rightarrow \infty$ in $\langle 2 \rangle 2$.

□

Corollary 15.3.17.1. *For any normed space V over K , the space $\mathcal{B}(V, K)$ is a Banach space.*

Theorem 15.3.18. *Let U be a normed space and V a Banach space. Let W be a subspace of U . Let $T : W \rightarrow V$ be a continuous linear transformation. Then T has a unique extension to a continuous linear transformation $\text{cl } W \rightarrow V$.*

PROOF:

- (1)1. Define $S : \text{cl } W \rightarrow V$ by: $S(x) = \lim_{n \rightarrow \infty} T(x_n)$, where (x_n) is any sequence in W that converges to x .
- (2)1. For all $x \in \text{cl } W$, there exists a sequence (x_n) in W that converges to x .
PROOF: Theorem 15.1.43.
- (2)2. If (x_n) is a Cauchy sequence in W then $(T(x_n))$ is Cauchy in V .
 - (3)1. ASSUME: w.l.o.g. $T \neq 0$
 - (3)2. LET: (x_n) be a Cauchy sequence in W .
 - (3)3. PICK $B > 0$ such that $\forall x \in W. \|T(x)\| \leq B\|x\|$
 - (3)4. LET: $\epsilon > 0$
 - (3)5. PICK N such that $\forall m, n \geq N. \|x_m - x_n\| < \epsilon/\|T\|$
 - (3)6. LET: $m, n \geq N$
 - (3)7. $\|T(x_m) - T(x_n)\| < \epsilon$
- (2)3. If (x_n) and (y_n) are sequences in W that converge to the same element in $\text{cl } W$ then $(T(x_n))$ and $(T(y_n))$ have the same limit in V .
 - (3)1. ASSUME: w.l.o.g. $T \neq 0$
 - (3)2. ASSUME: $x_n \rightarrow l$ and $y_n \rightarrow l$ as $n \rightarrow \infty$
 - (3)3. LET: $T(x_n) \rightarrow a$ and $T(y_n) \rightarrow b$ as $n \rightarrow \infty$
 - (3)4. ASSUME: for a contradiction $a \neq b$
 - (3)5. LET: $\epsilon = \|a - b\|$
 - (3)6. PICK N such that $\forall n \geq N. \|x_n - l\| < \epsilon/3\|T\|$ and $\forall n \geq N. \|y_n - l\| < \epsilon/3\|T\|$
 - (3)7. $\forall n \geq N. \|T(x_n) - T(y_n)\| < 2\epsilon/3$
 - (3)8. $\|a - b\| \leq 2\epsilon/3$
 - (3)9. This contradicts (3)5.
- (1)2. S extends T
 - (2)1. LET: $w \in W$
 - (2)2. $w \rightarrow w$ as $n \rightarrow \infty$
 - (2)3. $T(w) \rightarrow T(w)$ as $n \rightarrow \infty$
 - (2)4. $S(w) = T(w)$
- (1)3. S is bounded.
 - (2)1. LET: $x \in \text{cl } W$
PROVE: $\|S(x)\| \leq \|T\|\|x\|$
 - (2)2. PICK a sequence (x_n) in W that converges to x .
 - (2)3. $\|T(x_n)\| \leq \|T\|\|x_n\|$ for all n .
 - (2)4. $\|S(x)\| \leq \|T\|\|x\|$
 - PROOF: Taking the limit as $n \rightarrow \infty$.
- (1)4. S is linear.

- ⟨2⟩1. LET: $x, y \in \text{cl } W$ and $\alpha, \beta \in K$
- ⟨2⟩2. PICK sequences (x_n) and (y_n) in W that converge to x and y .
- ⟨2⟩3. $T(\alpha x_n + \beta y_n) = \alpha T(x_n) + \beta T(y_n)$ for all n .
- ⟨2⟩4. $S(\alpha x + \beta y) = \alpha S(x) + \beta S(y)$

PROOF: Taking the limit as $n \rightarrow \infty$.

- ⟨1⟩5. S is unique.
- ⟨2⟩1. LET: S' be a continuous linear extension of S defined on $\text{cl } W$.
- ⟨2⟩2. LET: $x \in W$
- PROVE: $S(x) = S'(x)$
- ⟨2⟩3. PICK a sequence (x_n) in W that converges to x .
- ⟨2⟩4. $T(x_n) = S'(x_n) \rightarrow S'(x)$ as $n \rightarrow \infty$
- ⟨2⟩5. $S'(x) = S(x)$

□

Corollary 15.3.18.1. *Let U be a normed space and V a Banach space. Let W be a dense subspace of U . Let $T : W \rightarrow V$ be a continuous linear transformation. Then T has a unique extension to a continuous linear transformation $U \rightarrow V$.*

Definition 15.3.19 (Functional). Let V be a normed space over K . A *functional* on V is a bounded linear mapping $V \rightarrow K$. The *dual space* of V is the space $\mathcal{B}(V, K)$ of all functionals.

Theorem 15.3.20 (Banach-Steinhaus Theorem). *Let \mathcal{T} be a family of bounded linear mappings from a Banach space X into a normed space Y . If, for every $x \in X$, there exists a constant M_x such that $\forall T \in \mathcal{T}. \|T(x)\| \leq M_x$, then there exists a constant $M > 0$ such that $\forall T \in \mathcal{T}. \|T\| \leq M$.*

PROOF:

- ⟨1⟩1. ASSUME: for a contradiction no such M exists.
- ⟨1⟩2. For $n \in \mathbb{Z}_+$, PICK $T_n \in \mathcal{T}$ such that $\|T_n\| > n2^n$.
- ⟨1⟩3. For $n \in \mathbb{Z}_+$, PICK $x_n \in X$ such that $\|x_n\| = 1$ and $\|T_n(x_n)\| > n2^n$.
- ⟨1⟩4. For $n \in \mathbb{Z}_+$,

$$\left\| \frac{1}{n} T_n \left(\frac{x_n}{2^n} \right) \right\| > 1 .$$

- ⟨1⟩5. For $i, j \in \mathbb{Z}_+$,
LET: $y_{ij} = \frac{1}{i} T_i \left(\frac{x_j}{2^j} \right)$.
 - ⟨1⟩6. For all $j \in \mathbb{Z}_+$, $y_{ij} \rightarrow 0$ as $i \rightarrow \infty$
 - ⟨2⟩1. LET: $j \in \mathbb{Z}_+$
 - ⟨2⟩2. PICK M such that $\forall T \in \mathcal{T}. \|T(x_j/2^j)\| \leq M$
 - ⟨2⟩3. For all i , $\|y_{ij}\| \leq M/i$
 - ⟨1⟩7. For any increasing sequence of positive integers (p_i) , we have $\sum_{j=1}^{\infty} y_{p_i p_j} \rightarrow 0$ as $i \rightarrow \infty$
 - ⟨2⟩1. LET: (p_i) be an increasing sequence of positive integers.
 - ⟨2⟩2. LET: $z = \sum_{j=1}^{\infty} x_{p_j} / 2^{p_j}$
- PROOF: This converges by Theorem 15.3.13.
- ⟨2⟩3. PICK C such that $\forall T \in \mathcal{T}. \|T(z)\| \leq C$
 - ⟨2⟩4. For all i , $\|\sum_{j=1}^{\infty} y_{p_i p_j}\| \leq C/p_i$.

PROOF:

$$\left\| \sum_{j=1}^{\infty} y_{p_i p_j} \right\| = \left\| \sum_{j=1}^{\infty} \frac{1}{p_i} T_{p_i} \left(\frac{x_{p_j}}{2^{p_j}} \right) \right\| \quad (\langle 1 \rangle 5)$$

$$= \frac{1}{p_i} \left\| T_{p_i} \left(\sum_{j=1}^{\infty} \frac{x_{p_j}}{2^{p_j}} \right) \right\| \quad (T_{p_i} \text{ continuous})$$

$$= \frac{1}{p_i} \|T_{p_i}(z)\| \quad (\langle 2 \rangle 2)$$

$$\leq \frac{C}{p_i} \quad (\langle 2 \rangle 3)$$

$$\langle 2 \rangle 5. \sum_{j=1}^{\infty} y_{p_i p_j} \rightarrow 0 \text{ as } i \rightarrow \infty$$

$$\langle 1 \rangle 8. y_{ii} \rightarrow 0 \text{ as } i \rightarrow \infty$$

PROOF: Diagonal Theorem, $\langle 1 \rangle 6$, $\langle 1 \rangle 7$. $\langle 1 \rangle 9$. Q.E.D.PROOF: $\langle 1 \rangle 4$ and $\langle 1 \rangle 8$ form a contradiction.

□

15.4 Contraction Mappings

Definition 15.4.1 (Contraction Mapping). Let E be a normed space over K . Let $A \subseteq E$. A function $f : A \rightarrow E$ is a *contraction (mapping)* iff there exists a real α such that $0 < \alpha < 1$ and

$$\forall x, y \in A. \|f(x) - f(y)\| \leq \alpha \|x - y\| .$$

Proposition 15.4.2. *Contraction mappings are uniformly continuous.*

PROOF:

 $\langle 1 \rangle 1$. LET: E be a normed space over K . $\langle 1 \rangle 2$. LET: $A \subseteq E$ $\langle 1 \rangle 3$. LET: $f : A \rightarrow E$ be a contraction mapping. $\langle 1 \rangle 4$. PICK α such that $0 < \alpha < 1$ and $\forall x, y \in A. \|f(x) - f(y)\| \leq \alpha \|x - y\|$. $\langle 1 \rangle 5$. LET: $\epsilon > 0$ $\langle 1 \rangle 6$. LET: $\delta = \epsilon/\alpha$ $\langle 1 \rangle 7$. For all $x, y \in A$, if $\|x - y\| < \delta$ then $\|f(x) - f(y)\| < \epsilon$.

□

Theorem 15.4.3 (Banach Fixed Point Theorem). Let E be a Banach space over K . Let F be a nonempty closed subset of E . Let $f : F \rightarrow F$ be a contraction mapping. Then there exists a unique $z \in F$ such that $f(z) = z$.

PROOF:

 $\langle 1 \rangle 1$. PICK α such that $0 < \alpha < 1$ and

$$\forall x, y \in F. \|f(x) - f(y)\| \leq \alpha \|x - y\| .$$

 $\langle 1 \rangle 2$. PICK $x_0 \in F$

⟨1⟩3. For $n \in \mathbb{Z}_+$,

LET: $x_n = f^n(x_0)$.

⟨1⟩4. (x_n) is a Cauchy sequence.

⟨2⟩1. For all $n \in \mathbb{Z}_+$ we have $\|x_{n+1} - x_n\| \leq \alpha^n \|x_1 - x_0\|$.

⟨2⟩2. For all $m, n \in \mathbb{Z}_+$ with $m < n$ we have $\|x_n - x_m\| < \alpha^m \|x_1 - x_0\| / (1 - \alpha)$.

PROOF:

$$\begin{aligned} \|x_n - x_m\| &\leq \|x_n - x_{n-1}\| + \|x_{n-1} - x_{n-2}\| + \cdots + \|x_{m+1} - x_m\| \quad (\text{Triangle inequality}) \\ &\leq (\alpha^{n-1} + \alpha^{n-2} + \cdots + \alpha^m) \|x_1 - x_0\| \quad (\langle 2 \rangle 1) \\ &< \frac{\|x_1 - x_0\|}{1 - \alpha} \alpha^m \end{aligned}$$

⟨2⟩3. LET: $\epsilon > 0$

⟨2⟩4. PICK N such that $\alpha^N \|x_1 - x_0\| / (1 - \alpha) < \epsilon$

⟨2⟩5. For all $m, n \geq N$, we have $\|x_n - x_m\| < \epsilon$

⟨1⟩5. LET: $z = \lim_{n \rightarrow \infty} x_n$

⟨1⟩6. $f(z) = z$

PROOF:

$$\begin{aligned} f(z) &= f\left(\lim_{n \rightarrow \infty} x_n\right) \\ &= \lim_{n \rightarrow \infty} f(x_n) \quad (\text{Proposition 15.4.2}) \\ &= \lim_{n \rightarrow \infty} x_{n+1} \\ &= z \end{aligned}$$

⟨1⟩7. For any $w \in F$, if $f(w) = w$ then $w = z$.

⟨2⟩1. LET: $w \in F$

⟨2⟩2. ASSUME: $f(w) = w$

⟨2⟩3. $\|z - w\| \leq \alpha \|z - w\|$

PROOF: $\|z - w\| = \|f(z) - f(w)\| \leq \alpha \|z - w\|$

⟨2⟩4. $\|z - w\| = 0$

⟨2⟩5. $z = w$

□

Chapter 16

Inner Product Spaces

Definition 16.0.1 (Inner Product Space). Let E be a complex vector space. An *inner product* on E is a function $\langle \cdot, \cdot \rangle : E^2 \rightarrow \mathbb{C}$ such that, for all $x, y, z \in E$ and $\alpha, \beta \in \mathbb{C}$, we have:

1. $\langle x, y \rangle = \overline{\langle y, x \rangle}$
2. $\langle \alpha x + \beta y, z \rangle = \alpha \langle x, z \rangle + \beta \langle y, z \rangle$
3. $\langle x, x \rangle \geq 0$
4. If $\langle x, x \rangle = 0$ then $x = 0$

An *inner product space* consists of a complex vector space V and an inner product on V .

Proposition 16.0.2. Let E be an inner product space. For any $x \in E$, we have $\langle x, x \rangle$ is real.

PROOF: Since $\langle x, x \rangle = \overline{\langle x, x \rangle}$. \square

Proposition 16.0.3.

$$\langle x, \alpha y + \beta z \rangle = \overline{\alpha} \langle x, y \rangle + \overline{\beta} \langle x, z \rangle$$

Proposition 16.0.4.

$$\langle 0, y \rangle = \langle x, 0 \rangle = 0$$

Proposition 16.0.5. The function $\langle \vec{x}, \vec{y} \rangle = \sum_{i=1}^n x_i \overline{y_i}$ is an inner product on \mathbb{C}^n .

Proposition 16.0.6. The function $\langle (x_n), (y_n) \rangle = \sum_{i=1}^{\infty} x_i \overline{y_i}$ is an inner product on l^2 .

Proposition 16.0.7. The function $\langle f, g \rangle = \int_a^b f(x) \overline{g(x)} dx$ is an inner product on $\mathcal{C}([a, b])$.

Proposition 16.0.8. *Let $p > 1$ and $\Omega \subseteq \mathbb{R}^N$. Let $L^p(\Omega)$ be the set of all functions $f : \Omega \rightarrow \mathbb{C}$ such that $|f|^p$ is Lebesgue integrable.*

The function $\langle f, g \rangle = \int_{\Omega} f(x)g(x)dx$ is an inner product on $L^2(\Omega)$.

Proposition 16.0.9. *Let E_1 and E_2 be inner product spaces. Then the function $\langle (e_1, e_2), (e'_1, e'_2) \rangle = \langle e_1, e'_1 \rangle + \langle e_2, e'_2 \rangle$ is an inner product on $E_1 \times E_2$.*

Definition 16.0.10 (Norm). In an inner product space, define $\|x\| = \sqrt{\langle x, x \rangle}$.

Proposition 16.0.11 (Schwarz's Inequality). *In any inner product space,*

$$|\langle x, y \rangle| \leq \|x\| \|y\| .$$

Equality holds iff x and y are linearly dependent.

PROOF:

$\langle 1 \rangle 1$. ASSUME: w.l.o.g. $y \neq 0$

$\langle 1 \rangle 2$. $|\langle x, y \rangle| \leq \|x\| \|y\|$

$\langle 2 \rangle 1$. For all $\alpha \in \mathbb{C}$ we have $\langle x, x \rangle + \bar{\alpha} \langle x, y \rangle + \alpha \langle y, x \rangle + |\alpha|^2 \langle y, y \rangle$

PROOF: The right-hand side is $\langle x + \alpha y, x + \alpha y \rangle$.

$\langle 2 \rangle 2$. $\langle x, x \rangle \langle y, y \rangle - |\langle x, y \rangle|^2 \geq 0$

PROOF: Taking $\alpha = -\langle x, x \rangle / \langle y, y \rangle$ in $\langle 2 \rangle 1$.

$\langle 1 \rangle 3$. If $|\langle x, y \rangle| = \|x\| \|y\|$ then x and y are linearly dependent.

$\langle 2 \rangle 1$. ASSUME: $|\langle x, y \rangle| = \|x\| \|y\|$

$\langle 2 \rangle 2$. $\langle x, y \rangle \langle y, x \rangle = \langle x, x \rangle \langle y, y \rangle$

$\langle 2 \rangle 3$. $\langle y, y \rangle x - \langle x, x \rangle y = 0$

PROOF:

$$\begin{aligned} \langle \langle y, y \rangle x - \langle x, x \rangle y, \langle y, y \rangle x - \langle x, x \rangle y \rangle &= \langle y, y \rangle^2 \langle x, x \rangle - \langle y, y \rangle \langle y, x \rangle \langle x, y \rangle - \langle x, y \rangle \langle y, y \rangle \langle y, x \rangle + \langle x, y \rangle \langle y, x \rangle \langle x, x \rangle \\ &= 0 \end{aligned}$$

$\langle 1 \rangle 4$. If x and y are linearly dependent then $|\langle x, y \rangle| = \|x\| \|y\|$

$\langle 2 \rangle 1$. ASSUME: x and y are linearly dependent.

$\langle 2 \rangle 2$. LET: $y = \alpha x$

$\langle 2 \rangle 3$. $|\langle x, y \rangle| = \|x\| \|y\|$

PROOF:

$$\begin{aligned} |\langle x, y \rangle| &= |\langle x, \alpha x \rangle| \\ &= |\alpha| |\langle x, x \rangle| \\ &= |\alpha| \|x\|^2 \\ &= \|x\| \|\alpha x\| \\ &= \|x\| \|y\| \end{aligned}$$

□

Corollary 16.0.11.1 (Triangle Inequality). *In any inner product space,*

$$\|x + y\| \leq \|x\| + \|y\|$$

PROOF:

$$\begin{aligned}
\|x + y\|^2 &= \langle x + y, x + y \rangle \\
&= \langle x, x \rangle + \langle x, y \rangle + \langle y, x \rangle + \langle y, y \rangle \\
&\leq \langle x, x \rangle + 2|\langle x, y \rangle| + \langle y, y \rangle \\
&\leq \|x\|^2 + 2\|x\|\|y\| + \|y\|^2 && \text{(Schwarz's Inequality)} \\
&= (\|x\| + \|y\|)^2 && \square
\end{aligned}$$

Corollary 16.0.11.2. *The norm in an inner product space is a norm.*

Theorem 16.0.12 (Parallelogram Law). *In any inner product space,*

$$\|x + y\|^2 + \|x - y\|^2 = 2(\|x\|^2 + \|y\|^2)$$

PROOF:

$$\begin{aligned}
\langle 1 \rangle 1. \quad &\|x + y\|^2 = \|x\|^2 + \langle x, y \rangle + \langle y, x \rangle + \|y\|^2 \\
\langle 1 \rangle 2. \quad &\|x - y\|^2 = \|x\|^2 - \langle x, y \rangle - \langle y, x \rangle + \|y\|^2 \\
\langle 1 \rangle 3. \quad &\text{Q.E.D.}
\end{aligned}$$

PROOF: Add $\langle 1 \rangle 1$ and $\langle 1 \rangle 2$.

\square

Proposition 16.0.13. *Let E be a normed space over \mathbb{C} . Then there exists an inner product on E that induces the norm of E iff E satisfies the Parallelogram Law.*

PROOF: If E satisfies the parallelogram law, define

$$\langle x, y \rangle = \frac{1}{4}(\|x + y\|^2 - \|x - y\|^2 + i\|x + iy\|^2 - i\|x - iy\|^2) .$$

Definition 16.0.14 (Orthogonal). Vectors x and y in an inner product space are *orthogonal*, $x \perp y$, iff $\langle x, y \rangle = 0$.

Theorem 16.0.15 (Pythagorean Formula). *If x and y are orthogonal then*

$$\|x + y\|^2 = \|x\|^2 + \|y\|^2 .$$

Definition 16.0.16 (Weak Convergence). Let E be an inner product space. Let (x_n) be a sequence in E and $l \in E$. Then (x_n) *weakly converges* to l , $x_n \xrightarrow{w} l$ as $n \rightarrow \infty$, iff $\forall y \in E. \langle x_n, y \rangle \rightarrow \langle l, y \rangle$ as $n \rightarrow \infty$.

Proposition 16.0.17. *In any inner product space E , the inner product $\langle \cdot, \cdot \rangle : E^2 \rightarrow \mathbb{C}$ is continuous.*

PROOF:

$\langle 1 \rangle 1.$ LET: $x_n \rightarrow x$ and $y_n \rightarrow y$ in E .

$\langle 1 \rangle 2.$ $\langle x_n, y_n \rangle \rightarrow \langle x, y \rangle$

PROOF:

$$\begin{aligned}
|\langle x_n, y_n \rangle - \langle x, y \rangle| &\leq |\langle x_n, y_n \rangle - \langle x_n, y \rangle| + |\langle x_n, y \rangle - \langle x, y \rangle| \\
&= |\langle x_n, y_n - y \rangle| + |\langle x_n - x, y \rangle| \\
&\leq \|x_n\| \|y_n - y\| + \|x_n - x\| \|y\| && \text{(Schwarz's Inequality)} \\
&\rightarrow 0
\end{aligned}$$

using the fact that (x_n) is bounded.

□

Theorem 16.0.18. $x_n \rightarrow l$ if and only if $x_n \xrightarrow{w} l$ and $\|x_n\| \rightarrow \|l\|$.

PROOF:

⟨1⟩1. If $x_n \rightarrow l$ then $x_n \xrightarrow{w} l$ and $\|x_n\| \rightarrow \|l\|$.

PROOF: Easy using the fact that the inner product is continuous.

⟨1⟩2. If $x_n \xrightarrow{w} l$ and $\|x_n\| \rightarrow \|l\|$ then $x_n \rightarrow l$.

⟨2⟩1. ASSUME: $x_n \xrightarrow{w} l$ and $\|x_n\| \rightarrow \|l\|$

⟨2⟩2. $\langle x_n, l \rangle \rightarrow \|l\|^2$

⟨2⟩3. $\|x_n - l\| \rightarrow 0$

PROOF:

$$\begin{aligned} \|x_n - l\|^2 &= \langle x_n - l, x_n - l \rangle \\ &= \langle x_n, x_n \rangle - \langle x_n, l \rangle - \langle l, x_n \rangle + \langle l, l \rangle \\ &= \|x_n\|^2 - \langle x_n, l \rangle - \overline{\langle x_n, l \rangle} + \|l\|^2 \\ &\rightarrow \|l\|^2 - 2\|l\|^2 + \|l\|^2 \\ &= 0 \end{aligned}$$

□

Theorem 16.0.19. Let S be a subset of an inner product space E such that $\text{span } S$ is dense in E . If (x_n) is a bounded sequence in E and, for all $y \in S$, we have $\langle x_n, y \rangle \rightarrow \langle x, y \rangle$ then $x_n \xrightarrow{w} x$.

PROOF:

⟨1⟩1. For all $y \in \text{span } S$, we have $\langle x_n, y \rangle \rightarrow \langle x, y \rangle$

⟨1⟩2. LET: $z \in E$

PROVE: $\langle x_n, z \rangle \rightarrow \langle x, z \rangle$

⟨1⟩3. LET: $\epsilon > 0$

PROVE: There exists n_0 such that $\forall n \geq n_0, |\langle x_n, z \rangle - \langle x, z \rangle| < \epsilon$

⟨1⟩4. PICK $M > 0$ such that $\|x\| \leq M$ and $\forall n \in \mathbb{Z}_+, \|x_n\| \leq M$.

⟨1⟩5. PICK $y_0 \in \text{span } S$ such that $\|z - y_0\| < \epsilon/3M$

⟨1⟩6. PICK $n_0 \in \mathbb{Z}_+$ such that, for all $n \geq n_0$, we have $|\langle x_n, y_0 \rangle - \langle x, y_0 \rangle| < \epsilon/3$

⟨1⟩7. LET: $n \geq n_0$

⟨1⟩8. $|\langle x_n, z \rangle - \langle x, z \rangle| < \epsilon$

PROOF:

Definition 16.1.6 (Legendre Polynomials). The *Legendre polynomials* $P_n \in \mathbb{Q}[x]$ for $n \in \mathbb{N}$ are defined by

$$\begin{aligned} P_0 &= 1 \\ P_n &= \frac{1}{2^n n!} \frac{d^n}{dx^n} (x^2 - 1)^n \end{aligned}$$

Proposition 16.1.7. *Let P_n be the n th Legendre polynomial. Then $\{P_n \mid n \in \mathbb{N}\}$ is orthogonal in $L^2([-1, 1])$.*

Definition 16.1.8 (Hermite Polynomial). The *Hermite polynomials* $H_n \in \mathbb{R}[x]$ for $n \in \mathbb{N}$ are defined by

$$H_n(x) = (-1)^n e^{x^2} \frac{d^n}{dx^n} e^{-x^2}.$$

Proposition 16.1.9. *Let H_n be the n th Hermite polynomial. Then $\{e^{-x^2/2} H_n(x) \mid n \in \mathbb{N}\}$ is orthogonal in $L^2(\mathbb{R})$.*

Theorem 16.1.10. *Let V be an inner product space. If $x_1, \dots, x_n \in V$ are orthogonal then*

$$\left\| \sum_{i=1}^n x_i \right\|^2 = \sum_{i=1}^n \|x_i\|^2 .$$

Theorem 16.1.11 (Bessel's Equality). *Let V be an inner product space. Let $x_1, \dots, x_n \in V$ be orthonormal. Let $x \in V$. Then*

$$\left\| x - \sum_{k=1}^n \langle x, x_k \rangle x_k \right\|^2 = \|x\|^2 - \sum_{k=1}^n |\langle x, x_k \rangle|^2 .$$

PROOF:

$$\begin{aligned} \left\| x - \sum_{k=1}^n \langle x, x_k \rangle x_k \right\|^2 &= \left\langle x - \sum_{k=1}^n \langle x, x_k \rangle x_k, x - \sum_{k=1}^n \langle x, x_k \rangle x_k \right\rangle \\ &= \langle x, x \rangle - \left\langle x, \sum_{k=1}^n \langle x, x_k \rangle x_k \right\rangle - \left\langle \sum_{k=1}^n \langle x, x_k \rangle x_k, x \right\rangle \\ &\quad + \left\langle \sum_{k=1}^n \langle x, x_k \rangle x_k, \sum_{k=1}^n \langle x, x_k \rangle x_k \right\rangle \\ &= \langle x, x \rangle - 2 \sum_{k=1}^n \langle x, x_k \rangle \langle x_k, x \rangle + \sum_{i=1}^n \sum_{j=1}^n \langle x, x_i \rangle \langle x_j, x \rangle \langle x_i, x_j \rangle \\ &= \|x\|^2 - 2 \sum_{k=1}^n |\langle x, x_k \rangle|^2 + \sum_{i=1}^n \langle x, x_i \rangle \langle x_i, x \rangle \\ &= \|x\|^2 - \sum_{k=1}^n |\langle x, x_k \rangle|^2 \end{aligned} \quad \square$$

Corollary 16.1.11.1 (Bessel's Inequality). *Let V be an inner product space. Let $x_1, \dots, x_n \in V$ be orthonormal. Let $x \in E$. Then*

$$\sum_{k=1}^n |\langle x, x_k \rangle|^2 \leq \|x\|^2 .$$

Corollary 16.1.11.2. *Orthonormal sequences are weakly convergent to 0.*

PROOF: Let (x_n) be an orthonormal sequence. Taking the limit in Bessel's inequality we have $\sum_{k=1}^{\infty} |\langle x, x_k \rangle|^2 \leq \|x\|^2 < \infty$ and so $\langle x, x_k \rangle \rightarrow 0$ as $k \rightarrow \infty$. \square

Corollary 16.1.11.3 (Generalized Fourier Series). *Let V be an inner product space. Let (e_n) be an orthonormal sequence in V . For any $x \in V$, the generalized Fourier series of x is*

$$\sum_{n=1}^{\infty} \langle x, e_n \rangle e_n ,$$

and $\langle x, e_n \rangle$ is called the n th generalized Fourier coefficient of x with respect to (e_n) . We have $(\langle x, e_n \rangle e_n)_n \in l^2$.

Definition 16.1.12 (Complete Orthonormal Sequence). Let E be an inner product space. Let (x_n) be an orthonormal sequence in E . Then (x_n) is *complete* iff, for all $x \in E$, we have

$$\sum_{n=1}^{\infty} \langle x, x_n \rangle x_n = x \quad .$$

Chapter 17

Hilbert Spaces

Definition 17.0.1 (Hilbert Space). A *Hilbert space* is a complete inner product space.

Proposition 17.0.2. For $n \in \mathbb{N}$, \mathbb{C}^n is a Hilbert space.

Proposition 17.0.3. l^2 is a Hilbert space.

Proposition 17.0.4. $L^2(\mathbb{R})$ is a Hilbert space.

Proposition 17.0.5. $L^2([a, b])$ is a Hilbert space.

Proposition 17.0.6. Let ρ be a measurable function on $[a, b]$ such that $\rho(x) > 0$ almost everywhere. Let $L^{2\rho}([a, b])$ be the set of all measurable functions $f : [a, b] \rightarrow \mathbb{C}$ such that

$$\int_a^b |f(x)|^2 \rho(x) dx < \infty .$$

Define an inner product on $L^{2\rho}([a, b])$ by

$$\langle f, g \rangle = \int_a^b f(x) \overline{g(x)} \rho(x) dx .$$

Then $L^{2\rho}([a, b])$ is a Hilbert space.

Proposition 17.0.7. Let m and N be positive integers. Let Ω be an open set in \mathbb{R}^N . Let $\tilde{H}^m(\Omega)$ be the set of all $f \in C^m(\Omega)$ such that, for every $\alpha = (\alpha_1, \dots, \alpha_N) \in \mathbb{Z}_+^N$ with $|\alpha| := \alpha_1 + \dots + \alpha_N \leq m$, we have

$$D^\alpha f := \frac{\partial^{|\alpha|} f}{\partial x_1^{\alpha_1} \partial x_2^{\alpha_2} \dots \partial x_N^{\alpha_N}} \in L^2(\Omega) .$$

Define an inner product on $\tilde{H}^m(\Omega)$ by

$$\langle f, g \rangle := \int_\Omega \sum_\alpha D^\alpha f \overline{D^\alpha g} .$$

Let $H^m(\Omega)$ be the completion of $\tilde{H}^m(\Omega)$. Then $H^m(\Omega)$ is a Hilbert space.

Theorem 17.0.8. *Weakly convergent sequences in a Hilbert space are bounded.*

PROOF:

$\langle 1 \rangle 1$. LET: H be a Hilbert space.

$\langle 1 \rangle 2$. LET: (x_n) be a weakly convergent sequence in H .

$\langle 1 \rangle 3$. For $n \in \mathbb{Z}_+$,

LET: $f_n : H \rightarrow \mathbb{C}$, $f_n(x) = \langle x, x_n \rangle$

$\langle 1 \rangle 4$. For $n \in \mathbb{Z}_+$, f_n is a bounded linear functional.

$\langle 1 \rangle 5$. For every $x \in H$, the sequence $(f_n(x))$ is bounded.

PROOF: Since it converges.

$\langle 1 \rangle 6$. PICK $M > 0$ such that, for all $n \in \mathbb{Z}_+$, we have $\|f_n\| \leq M$.

PROOF: Banach-Steinhaus Theorem, $\langle 1 \rangle 4$, $\langle 1 \rangle 5$.

$\langle 1 \rangle 7$. $\forall n \in \mathbb{Z}_+.$ $\|f_n\| = \|x_n\|$

$\langle 2 \rangle 1$. LET: $n \in \mathbb{Z}_+$

$\langle 2 \rangle 2$. $\|f_n\| \leq \|x_n\|$

PROOF: Since for all $x \in H$ we have $|f_n(x)| = |\langle x, x_n \rangle| \leq \|x\| \|x_n\|$ by Schwarz's Inequality.

$\langle 2 \rangle 3$. $\|x_n\| \leq \|f_n\|$

PROOF: Since $\|x_n\|^2 = |\langle x_n, x_n \rangle| = |f_n(x_n)| \leq \|f_n\| \|x_n\|$.

$\langle 1 \rangle 8$. $\forall n \in \mathbb{Z}_+.$ $\|x_n\| \leq M$

PROOF: $\langle 1 \rangle 6$, $\langle 1 \rangle 7$

□

Theorem 17.0.9. *Let H be a Hilbert space. Let (x_n) be an orthonormal sequence in H and let (α_n) be a sequence of complex numbers. Then the series $\sum_{n=1}^{\infty} \alpha_n x_n$ converges in H if and only if $\sum_{n=1}^{\infty} |\alpha_n|^2$ converges in \mathbb{R} , in which case*

$$\left\| \sum_{n=1}^{\infty} \alpha_n x_n \right\|^2 = \sum_{n=1}^{\infty} |\alpha_n|^2 .$$

PROOF:

$\langle 1 \rangle 1$. For $m > k > 0$ we have

$$\left\| \sum_{n=k}^m \alpha_n x_n \right\|^2 = \sum_{n=k}^m |\alpha_n|^2 .$$

PROOF: Theorem 16.1.10.

$\langle 1 \rangle 2$. If $\sum_{n=1}^{\infty} |\alpha_n|^2 < \infty$ then $\sum_{n=1}^{\infty} \alpha_n x_n$ converges.

$\langle 2 \rangle 1$. ASSUME: $\sum_{n=1}^{\infty} |\alpha_n|^2 < \infty$

$\langle 2 \rangle 2$. $(\sum_{n=1}^m \alpha_n x_n)_m$ is Cauchy.

PROOF: From $\langle 1 \rangle 1$.

$\langle 2 \rangle 3$. $\sum_{n=1}^{\infty} \alpha_n x_n$ converges.

$\langle 1 \rangle 3$. If $\sum_{n=1}^{\infty} \alpha_n x_n$ converges then $\sum_{n=1}^{\infty} |\alpha_n|^2 < \infty$.

PROOF: From $\langle 1 \rangle 1$.

$\langle 1 \rangle 4$. If $\sum_{n=1}^{\infty} |\alpha_n|^2 < \infty$ then

$$\left\| \sum_{n=1}^{\infty} \alpha_n x_n \right\|^2 = \sum_{n=1}^{\infty} |\alpha_n|^2 .$$

PROOF: From $\langle 1 \rangle 1$.

□

Proposition 17.0.10. *Every complete orthonormal sequence in a Hilbert space is a basis.*

PROOF:

$\langle 1 \rangle 1$. LET: E be an inner product space.

$\langle 1 \rangle 2$. LET: (e_n) be a complete orthonormal sequence in E .

$\langle 1 \rangle 3$. For all $x \in E$, there exists a sequence (α_n) in \mathbb{C} such that $x = \sum_n \alpha_n e_n$.

PROOF: Immediate from $\langle 1 \rangle 2$.

$\langle 1 \rangle 4$. If $\sum_n \alpha_n e_n = \sum_n \beta_n e_n$ then $\alpha_n = \beta_n$ for all n .

$\langle 2 \rangle 1$. LET: $x = \sum_n \alpha_n e_n = \sum_n \beta_n e_n$

$\langle 2 \rangle 2$. $\sum_n |\alpha_n - \beta_n|^2 = 0$

PROOF:

$$\begin{aligned}
 0 &= \|x - x\|^2 \\
 &= \left\| \sum_{n=1}^{\infty} \alpha_n e_n - \sum_{n=1}^{\infty} \beta_n e_n \right\|^2 && (\langle 2 \rangle 1) \\
 &= \left\| \sum_{n=1}^{\infty} (\alpha_n - \beta_n) e_n \right\|^2 \\
 &= \sum_{n=1}^{\infty} |\alpha_n - \beta_n|^2 && (\text{Theorem 17.0.9})
 \end{aligned}$$

$\langle 2 \rangle 3$. $\alpha_n = \beta_n$ for all n .

□

Theorem 17.0.11. *An orthonormal sequence (x_n) in a Hilbert space H is complete if and only if, for all $x \in H$, if $\forall n. \langle x, x_n \rangle = 0$ then $x = 0$.*
