Chapter 1

Sets and Classes

1.1 Classes

Our language is the language of first-order logic with equality over one primitive binary predicate $\in$. We call all the objects we reason about *sets*. When $a \in b$, we say a is a *member* or *element* of b, or b *contains* a. We write $b \ni a$ for $a \in b$, and $a \notin b$ for $\neg(a \in b)$. We write $\forall x \in a.\phi$ as an abbreviation for $\forall x(x \in a \to \phi)$, and $\exists x \in a.\phi$ as an abbreviation for $\exists x(x \in a \land \phi)$.

We shall speak informally of *classes* as an abbreviation for talking about predicates. A *class* is determined by a unary predicate $\phi[x]$ (possibly with parameters). We write $\{x \mid \phi[x]\}$ or $\{x : \phi[x]\}$ for the class determined by $\phi[x]$. We write 'a is an element of $\{x \mid \phi[x]\}$' or '$a \in \{x \mid \phi[x]\}$' for $\phi[a]$.

We write $\{t[x_1, \ldots, x_n] \mid P[x_1, \ldots, x_n]\}$ for

$$\{y \mid \exists x_1, \ldots, x_n(y = t[x_1, \ldots, x_n] \land P[x_1, \ldots, x_n])\} \ .$$

We say two classes $\mathbf{A}$ and $\mathbf{B}$ are *equal*, and write $\mathbf{A} = \mathbf{B}$, iff $\forall x(x \in \mathbf{A} \leftrightarrow x \in \mathbf{B})$.

Proposition Schema 1.1.1. *For any class* $\mathbf{A}$*, the following is a theorem.*

$$\mathbf{A} = \mathbf{A}$$

PROOF: We have $\forall x(x \in \mathbf{A} \Leftrightarrow x \in \mathbf{A})$. $\square$

Proposition Schema 1.1.2. *For any classes* $\mathbf{A}$ *and* $\mathbf{B}$*, the following is a theorem.*

If $\mathbf{A} = \mathbf{B}$ *then* $\mathbf{B} = \mathbf{A}$*.*

PROOF: If $\forall x(x \in \mathbf{A} \Leftrightarrow x \in \mathbf{B})$ then $\forall x(x \in \mathbf{B} \Leftrightarrow x \in \mathbf{A})$. $\square$

Proposition Schema 1.1.3. *For any classes* $\mathbf{A}$*,* $\mathbf{B}$ *and* $\mathbf{C}$*, the following is a theorem.*

If $\mathbf{A} = \mathbf{B}$ *and* $\mathbf{B} = \mathbf{C}$ *then* $\mathbf{A} = \mathbf{C}$*.*

PROOF: If $\forall x(x \in \mathbf{A} \Leftrightarrow x \in \mathbf{B})$ and $\forall x(x \in \mathbf{B} \Leftrightarrow x \in \mathbf{C})$ then $\forall x(x \in \mathbf{A} \Leftrightarrow x \in \mathbf{C})$. $\square$

1.1.1   Subclasses

Definition 1.1.4 (Subclass)**.** We say a class $\mathbf{A}$ is a *subclass* of $\mathbf{B}$, or $\mathbf{B}$ is a *superclass* of $\mathbf{A}$, or $\mathbf{B}$ *includes* $\mathbf{A}$, and write $\mathbf{A} \subseteq \mathbf{B}$ or $\mathbf{B} \supseteq \mathbf{A}$, iff every element of $\mathbf{A}$ is an element of $\mathbf{B}$. Otherwise we write $\mathbf{A} \nsubseteq \mathbf{B}$ or $\mathbf{B} \nsupseteq \mathbf{A}$.

We say $\mathbf{A}$ is a *proper* subclass of $\mathbf{B}$, $\mathbf{B}$ is a *proper* superclass of $\mathbf{A}$, or $\mathbf{B}$ *properly* includes $\mathbf{A}$, and write $\mathbf{A} \subsetneq \mathbf{B}$ or $\mathbf{B} \supsetneq \mathbf{A}$, iff $\mathbf{A} \subseteq \mathbf{B}$ and $\mathbf{A} \neq \mathbf{B}$.

Proposition Schema 1.1.5. *For any class* $\mathbf{A}$*, the following is a theorem.*

$$\mathbf{A} \subseteq \mathbf{A}$$

PROOF: Every element of $\mathbf{A}$ is an element of $\mathbf{A}$. $\square$

Proposition Schema 1.1.6. *For any classes* $\mathbf{A}$ *and* $\mathbf{B}$*, the following is a theorem.*
If $\mathbf{A} \subseteq \mathbf{B}$ *and* $\mathbf{B} \subseteq \mathbf{A}$ *then* $\mathbf{A} = \mathbf{B}$*.*

PROOF: If every element of $\mathbf{A}$ is an element of $\mathbf{B}$, and every element of $\mathbf{B}$ is an element of $\mathbf{A}$, then $\mathbf{A}$ and $\mathbf{B}$ have exactly the same elements. $\square$

Proposition Schema 1.1.7. *For any classes* $\mathbf{A}$*,* $\mathbf{B}$ *and* $\mathbf{C}$*, the following is a theorem.*
If $\mathbf{A} \subseteq \mathbf{B}$ *and* $\mathbf{B} \subseteq \mathbf{C}$ *then* $\mathbf{A} \subseteq \mathbf{C}$*.*

PROOF: If every element of $\mathbf{A}$ is an element of $\mathbf{B}$ and every element of $\mathbf{B}$ is an element of $\mathbf{C}$ then every element of $\mathbf{A}$ is an element of $\mathbf{C}$. $\square$

1.1.2   Constructions of Classes

Definition 1.1.8 (Empty Class)**.** The *empty class* $\emptyset$ is $\{x \mid \bot\}$. Every other class is *nonempty*.

Definition 1.1.9 (Universal Class)**.** The *universal class* $\mathbf{V}$ is $\{x \mid \top\}$.

Definition 1.1.10 (Enumeration)**.** Given objects a_1, ..., a_n, we define the class $\{a_1, \ldots, a_n\}$ to be the class $\{x \mid x = a_1 \vee \cdots \vee x = a_n\}$.

Definition 1.1.11 (Intersection)**.** For any classes $\mathbf{A}$ and $\mathbf{B}$, the *intersection* $\mathbf{A} \cap \mathbf{B}$ is $\{x \mid x \in \mathbf{A} \wedge x \in \mathbf{B}\}$.

Definition 1.1.12 (Union)**.** For any classes $\mathbf{A}$ and $\mathbf{B}$, the *union* $\mathbf{A} \cup \mathbf{B}$ is $\{x \mid x \in \mathbf{A} \vee x \in \mathbf{B}\}$.

Definition 1.1.13 (Relative Complement)**.** Let $\mathbf{A}$ and $\mathbf{B}$ be classes. The *relative complement* of $\mathbf{B}$ in $\mathbf{A}$ is the class $\mathbf{A} - \mathbf{B} := \{x \in \mathbf{A} \mid x \notin \mathbf{B}\}$.

Definition 1.1.14 (Symmetric Difference)**.** For any classes $\mathbf{A}$ and $\mathbf{B}$, the *symmetric difference* is the class $\mathbf{A} + \mathbf{B} := (\mathbf{A} - \mathbf{B}) \cup (\mathbf{B} - \mathbf{A})$.

Definition 1.1.15 (Pairwise disjoint)**.** Let $\mathbf{A}$ be a class. We say the elements of $\mathbf{A}$ are *pairwise disjoint* iff, for all $x, y \in \mathbf{A}$, if $x \cap y \neq \emptyset$ then $x = y$.

1.2   Sets and the Axiom of Extensionality

Axiom 1.2.1 (Extensionality)**.** *If two sets have exactly the same members, they are equal.*

Thanks to this axiom, we may identify a set a with the class $\{x \mid x \in a\}$. Our use of the symbols $\in$ and $=$ is consistent. We say a class $\mathbf{A}$ *is a set* iff there exists a set a such that $a = \mathbf{A}$; that is, $\{x \mid \phi[x]\}$ is a set iff $\exists a \forall x(x \in a \leftrightarrow \phi[x])$. Otherwise, $\mathbf{A}$ is a *proper class*.

Definition 1.2.2 (Subset)**.** If A is a set and $A \subseteq \mathbf{B}$, we say A is a *subset* of $\mathbf{B}$.

Definition 1.2.3 (Union)**.** The *union* of a class $\mathbf{A}$ is $\{x \mid \exists X \in \mathbf{A}.x \in X\}$. We write $\bigcup_{P(x)} t(x)$ for $\bigcup\{t(x) \mid P(x)\}$.

Definition 1.2.4 (Intersection)**.** The *intersection* of a class $\mathbf{A}$ is $\{x \mid \forall X \in \mathbf{A}.x \in X\}$. We write $\bigcap_{P(x)} t(x)$ for $\bigcap\{t(x) \mid P(x)\}$.

Definition 1.2.5 (Power Class)**.** For any class $\mathbf{A}$, the *power class* $\mathcal{P}\mathbf{A}$ is $\{X \mid X \subseteq \mathbf{A}\}$.

1.3   The Other Axioms

Axiom 1.3.1 (Union)**.** *The union of a set is a set.*

Axiom 1.3.2 (Power Set)**.** *The power class of a set is a set, which we call a* power set*.*

Axiom 1.3.3 (Infinity)**.** *There exists a set I such that:*

- *There exists an element of I that has no members*

- *For every $x \in I$, there exists a set $y \in I$ such that the elements of y are exactly x and the members of x.*

Axiom 1.3.4 (Choice)**.** *For any set A of pairwise disjoint, nonempty sets, there exists a set C such that, for all $x \in A$, we have $x \cap C$ has exactly one element.*

Axiom Schema 1.3.5 (Replacement)**.** *For any predicate $P(x, y)$, the following is an axiom:*
Let A be a set. Assume that, for all $x \in A$, there exists at most one y such that $P(x, y)$. Then $\{y \mid \exists x \in A.P(x, y)\}$ is a set.

Axiom 1.3.6 (Regularity)**.** *For any A, if A has a member, then there exists $m \in A$ such that $m \cap A = \emptyset$.*

1.4   Consequences of the Axioms

Proposition 1.4.1. *The empty class $\emptyset$ is a set.*

PROOF: Immediate from the Axiom of Infinity. $\square$

Proposition 1.4.2 (Russell's Paradox). *The class $\{x \mid x \notin x\}$ is a proper class.*

PROOF: Assume for a contradiction $R = \{x \mid x \notin x\}$ is a set. Then $R \in R$ if and only if $R \notin R$, which is impossible. $\square$

Proposition 1.4.3 (Pairing). *For any sets a and b, the class $\{a, b\}$ is a set.*

PROOF:
$\langle 1 \rangle 1$. LET: $P(x, y)$ be the predicate $(x = \emptyset \wedge y = a) \vee (x = \mathcal{P}\emptyset \wedge y = b)$.
$\langle 1 \rangle 2$. For all $x \in \mathcal{P}\mathcal{P}\emptyset$, there exists at most one y such that $P(x, y)$.
  $\langle 2 \rangle 1$. LET: $x \in \mathcal{P}\mathcal{P}\emptyset$
  $\langle 2 \rangle 2$. LET: y and y' be sets.
  $\langle 2 \rangle 3$. ASSUME: $P(x, y)$ and $P(x, y')$
  $\langle 2 \rangle 4$. $(x = \emptyset \wedge y = a) \vee (x = \mathcal{P}\emptyset \wedge y = b)$
    PROOF: From $\langle 2 \rangle 3$.
  $\langle 2 \rangle 5$. $(x = \emptyset \wedge y' = a) \vee (x = \mathcal{P}\emptyset \wedge y' = b)$
    PROOF: From $\langle 2 \rangle 3$.
  $\langle 2 \rangle 6$. $\emptyset \neq \mathcal{P}\emptyset$
    PROOF: Since $\emptyset \in \mathcal{P}\emptyset$ and $\emptyset \notin \emptyset$.
  $\langle 2 \rangle 7$. $y = y'$
$\langle 1 \rangle 3$. LET: A be the set $\{y \mid \exists x \in \mathcal{P}\mathcal{P}\emptyset . P(x, y)\}$.
$\langle 1 \rangle 4$. $A = \{a, b\}$
$\square$

Proposition 1.4.4. *The union of two sets is a set.*

PROOF: Because $A \cup B = \bigcup \{A, B\}$. $\square$

Proposition Schema 1.4.5. *For any number n, the following is a theorem:*
   For any sets $a_1, \ldots, a_n$, the class $\{a_1, \ldots, a_n\} = \{x \mid x = a_1 \vee \cdots \vee x = a_n\}$
is a set.

PROOF: The case $n = 1$ follows from Pairing since $\{a\} = \{a, a\}$.
If we have proved the theorem for n we have $\{a_1, \ldots, a_n, a_{n+1}\} = \{a_1, \ldots, a_n\} \cup \{a_{n+1}\}$. $\square$

Proposition Schema 1.4.6 (Comprehension). *For any predicate $P(x)$, the following is a theorem:*
   For any set A, the class $\{x \in A \mid P(x)\}$ is a set.

PROOF:
$\langle 1 \rangle 1$. LET: A be a set.
$\langle 1 \rangle 2$. LET: $Q(x, y)$ be the predicate $P(x) \wedge y = x$.
$\langle 1 \rangle 3$. For all $x \in A$, there exists at most one y such that $Q(x, y)$.

$\langle 2 \rangle 1$. LET: $x \in A$
$\langle 2 \rangle 2$. LET: y and y' be sets.
$\langle 2 \rangle 3$. ASSUME: $Q(x, y)$ and $Q(x, y')$
$\langle 2 \rangle 4$. $x \in A \wedge P(x) \wedge y = x \wedge y' = x$
   PROOF: From $\langle 2 \rangle 3$.
$\langle 2 \rangle 5$. $y = y'$
   PROOF: From $\langle 2 \rangle 4$.
$\langle 1 \rangle 4$. LET: B be the set $\{y \mid \exists x \in A.Q(x, y)\}$
  PROOF: This is a set by an Axiom of Replacement and $\langle 1 \rangle 3$.
$\langle 1 \rangle 5$. $B = \{y \in A \mid P(y)\}$
  PROOF:

$$y \in B \Leftrightarrow \exists x \in A.Q(x, y) \qquad (\langle 1 \rangle 4)$$
$$\Leftrightarrow \exists x \in A(P(x) \wedge y = x) \qquad (\langle 1 \rangle 2)$$
$$\Leftrightarrow P(y)$$

□

Corollary Schema 1.4.6.1. *For any class* **A**, *the following is a theorem:*
  For any set B, if **A** $\subseteq B$ *then* **A** *is a set.*

Corollary 1.4.6.1. *The universal class* **V** *is a proper class.*

Corollary 1.4.6.2. *The intersection of a set and a class is a set.*

Corollary 1.4.6.3. *The relative complement of a class in a set is a set.*

Corollary 1.4.6.4. *The symmetric difference of two sets is a set.*

Corollary 1.4.6.5. *The intersection of a nonempty class is a set.*

Proposition Schema 1.4.7. *For any classes* **A** *and* **B**, *the following is a theorem:*
  If **A** $\subseteq$ **B** *then* $\mathcal{P}$**A** $\subseteq \mathcal{P}$**B**.

PROOF: Every subset of **A** is a subset of **B**. □

Proposition Schema 1.4.8. *For any classes* **A** *and* **B**, *the following is a theorem:*
  If **A** $\subseteq$ **B** *then* $\bigcup$**A** $\subseteq \bigcup$**B**.

PROOF: If $x \in X \in$ **A** then $x \in X \in$ **B**. □

Proposition Schema 1.4.9. *For any class* **A**, *the following is a theorem:*

$$\mathbf{A} = \bigcup \mathcal{P}\mathbf{A}$$

PROOF:
$\langle 1 \rangle 1$. **A** $\subseteq \bigcup \mathcal{P}$**A**
  PROOF: For all $x \in$ **A** we have $x \in \{x\} \in \mathcal{P}$**A**.
$\langle 1 \rangle 2$. $\bigcup \mathcal{P}$**A** $\subseteq$ **A**

⟨2⟩1. LET: $x \in \bigcup \mathcal{P}\mathbf{A}$
⟨2⟩2. PICK $X \in \mathcal{P}\mathbf{A}$ such that $x \in X$
⟨2⟩3. $X \subseteq \mathbf{A}$
⟨2⟩4. $x \in \mathbf{A}$

☐

Proposition 1.4.10. *No set is a member of itself.*

PROOF:
⟨1⟩1. LET: x be any set.
⟨1⟩2. PICK $m \in \{x\}$ such that $m \cap \{x\} = \emptyset$.
⟨1⟩3. $m = x$
⟨1⟩4. $x \cap \{x\} = \emptyset$
⟨1⟩5. $x \notin x$

☐

Proposition 1.4.11. *There are no sets a and b such that $a \in b$ and $b \in a$.*

PROOF:
⟨1⟩1. LET: a and b be any sets.
⟨1⟩2. PICK $m \in \{a, b\}$ such that $m \cap \{a, b\} = \emptyset$
⟨1⟩3. CASE: $m = a$
  PROOF: Then $b \notin a$.
⟨1⟩4. CASE: $m = b$
  PROOF: Then $a \notin b$.

☐

1.5   Transitive Classes

Definition 1.5.1 (Transitive Class)**.** A class $\mathbf{A}$ is a *transitive class* iff whenever $x \in y \in \mathbf{A}$ then $x \in \mathbf{A}$.

Proposition Schema 1.5.2. *For any class $\mathbf{A}$, the following is a theorem:*
  The following are equivalent.

  1. $\mathbf{A}$ is a transitive class.

  2. $\bigcup \mathbf{A} \subseteq \mathbf{A}$

  3. Every element of $\mathbf{A}$ is a subset of $\mathbf{A}$.

  4. $\mathbf{A} \subseteq \mathcal{P}\mathbf{A}$

PROOF: Immediate from definitions. ☐

Proposition Schema 1.5.3. *For any class $\mathbf{A}$, the following is a theorem:*
  If $\mathbf{A}$ is a transitive class then $\bigcup \mathbf{A}$ is a transitive class.

PROOF:
⟨1⟩1. ASSUME: $\mathbf{A}$ is a transitive class.

⟨1⟩2. LET: $x \in y \in \bigcup \mathbf{A}$

⟨1⟩3. $y \in \mathbf{A}$

   PROOF: Since $\bigcup \mathbf{A} \subseteq \mathbf{A}$ by Proposition 1.5.2.

⟨1⟩4. $x \in \bigcup \mathbf{A}$

☐

Proposition Schema 1.5.4. *For any class* $\mathbf{A}$*, the following is a theorem:*
   We have $\mathbf{A}$ *is a transitive class if and only if* $\mathcal{P}\mathbf{A}$ *is a transitive class.*

PROOF:

⟨1⟩1. If $\mathbf{A}$ is a transitive class then $\mathcal{P}\mathbf{A}$ is a transitive class.

   ⟨2⟩1. ASSUME: $\mathbf{A}$ is a transitive class.

   ⟨2⟩2. $\mathbf{A} \subseteq \mathcal{P}\mathbf{A}$

      PROOF: Proposition 1.5.2.

   ⟨2⟩3. $\mathcal{P}\mathbf{A} \subseteq \mathcal{P}\mathcal{P}\mathbf{A}$

      PROOF: Proposition 1.4.7.

   ⟨2⟩4. $\mathcal{P}\mathbf{A}$ is a transitive class.

      PROOF: Proposition 1.5.2.

⟨1⟩2. If $\mathcal{P}\mathbf{A}$ is a transitive class then $\mathbf{A}$ is a transitive class.

   ⟨2⟩1. ASSUME: $\mathcal{P}\mathbf{A}$ is a transitive class.

   ⟨2⟩2. $\bigcup \mathcal{P}\mathbf{A} \subseteq \mathcal{P}\mathbf{A}$

      PROOF: Proposition 1.5.2.

   ⟨2⟩3. $\mathbf{A} \subseteq \mathcal{P}\mathbf{A}$

      PROOF: Proposition 1.4.9.

   ⟨2⟩4. $\mathbf{A}$ is a transitive class.

      PROOF: Proposition 1.5.2.

☐

Proposition Schema 1.5.5. *For any class* $\mathbf{A}$*, the following is a theorem:*
   If every member of $\mathbf{A}$ *is a transitive set then* $\bigcup \mathbf{A}$ *is a transitive class.*

PROOF:

⟨1⟩1. ASSUME: Every member of $\mathbf{A}$ is a transitive set.

⟨1⟩2. LET: $x \in y \in \bigcup \mathbf{A}$

⟨1⟩3. PICK $A \in \mathbf{A}$ such that $y \in A$.

⟨1⟩4. $x \in A$

   PROOF: Since A is a transitive set.

⟨1⟩5. $x \in \bigcup \mathbf{A}$

☐

Proposition Schema 1.5.6. *For any class* $\mathbf{A}$*, the following is a theorem:*
   If every member of $\mathbf{A}$ *is a transitive set then* $\bigcap \mathbf{A}$ *is a transitive class.*

PROOF:

⟨1⟩1. ASSUME: Every member of $\mathbf{A}$ is a transitive set.

⟨1⟩2. LET: $x \in y \in \bigcap \mathbf{A}$

     PROVE: $x \in \bigcap \mathbf{A}$

⟨1⟩3. LET: $A \in \mathbf{A}$

⟨1⟩4. $y \in A$

⟨1⟩5. $x \in A$

   Proof: Since A is a transitive set.

☐

Chapter 2

Relations

2.1 Ordered Pairs

Definition 2.1.1 (Ordered Pair)**.** For any sets a and b, the *ordered pair* (a, b) is defined to be $\{\{a\}, \{a, b\}\}$.

Theorem 2.1.2. *For any sets a, b, c, d, we have $(a, b) = (c, d)$ if and only if $a = c$ and $b = d$.*

PROOF:
$\langle 1 \rangle 1$. If $(a, b) = (c, d)$ then $a = c$ and $b = d$.
  $\langle 2 \rangle 1$. ASSUME: $\{\{a\}, \{a, b\}\} = \{\{c\}, \{c, d\}\}$
  $\langle 2 \rangle 2$. $\bigcap\{\{a\}, \{a, b\}\} = \bigcap\{\{c\}, \{c, d\}\}$
  $\langle 2 \rangle 3$. $\{a\} = \{c\}$
  $\langle 2 \rangle 4$. $a = c$
  $\langle 2 \rangle 5$. $\bigcup\{\{a\}, \{a, b\}\} = \bigcup\{\{c\}, \{c, d\}\}$
  $\langle 2 \rangle 6$. $\{a, b\} = \{c, d\}$
  $\langle 2 \rangle 7$. $b = c$ or $b = d$
  $\langle 2 \rangle 8$. $a = d$ or $b = d$
  $\langle 2 \rangle 9$. If $b = c$ and $a = d$ then $b = d$
    PROOF: By $\langle 2 \rangle 4$.
  $\langle 2 \rangle 10$. $b = d$
    PROOF: From $\langle 2 \rangle 7$, $\langle 2 \rangle 8$, $\langle 2 \rangle 9$.
$\langle 1 \rangle 2$. If $a = c$ and $b = d$ then $(a, b) = (c, d)$.
  PROOF: First-order logic.
$\square$

Definition 2.1.3 (Cartesian Product)**.** The *Cartesian product* of classes $\mathbf{A}$ and $\mathbf{B}$ is the class $\mathbf{A} \times \mathbf{B} := \{(x, y) \mid x \in \mathbf{A}, y \in \mathbf{B}\}$.

Proposition 2.1.4. *For any sets A and B, the class $A \times B$ is a set.*

PROOF: It is a subset of $\mathcal{P}\mathcal{P}(A \cup B)$. $\square$

Proposition Schema 2.1.5. *For any classes* **A**, **B** *and* **C**, *the following is a theorem:*

$$\mathbf{A} \times (\mathbf{B} \cup \mathbf{C}) = (\mathbf{A} \times \mathbf{B}) \cup (\mathbf{A} \times \mathbf{C})$$

PROOF:
$$
\begin{aligned}
(x, y) \in \mathbf{A} \times (\mathbf{B} \cup \mathbf{C}) &\Leftrightarrow x \in \mathbf{A} \wedge (y \in \mathbf{B} \vee y \in \mathbf{C}) \\
&\Leftrightarrow (x \in \mathbf{A} \wedge y \in \mathbf{B}) \vee (x \in \mathbf{A} \wedge y \in \mathbf{C}) \\
&\Leftrightarrow (x, y) \in (\mathbf{A} \times \mathbf{B}) \cup (\mathbf{A} \times \mathbf{C}) \qquad \qquad \square
\end{aligned}
$$

Proposition Schema 2.1.6. *For any classes* **A** *and* **B**, *the following is a theorem:*
   If $\mathbf{A} \times \mathbf{B} = \mathbf{A} \times \mathbf{C}$ *and* **A** *is nonempty then* $\mathbf{B} = \mathbf{C}$.

PROOF:
$\langle 1 \rangle 1$. PICK $a \in \mathbf{A}$
$\langle 1 \rangle 2$. For all x we have $x \in \mathbf{B}$ iff $x \in \mathbf{C}$.
   PROOF:
$$
\begin{aligned}
x \in \mathbf{B} &\Leftrightarrow (a, x) \in \mathbf{A} \times \mathbf{B} \\
&\Leftrightarrow (a, x) \in \mathbf{A} \times \mathbf{C} \\
&\Leftrightarrow x \in \mathbf{C}
\end{aligned}
$$

$\square$

Proposition Schema 2.1.7. *For any classes* **A** *and* **B**, *the following is a theorem:*

$$\mathbf{A} \times \bigcup \mathbf{B} = \{(a, b) \mid \exists Y \in \mathbf{B}.(a \in \mathbf{A} \wedge b \in Y)\}$$

PROOF:
$$
\begin{aligned}
(x, y) \in A \times \bigcup \mathbf{B} &\Leftrightarrow x \in A \wedge \exists Y \in \mathbf{B}.y \in Y \\
&\Leftrightarrow \exists Y \in \mathbf{B}(x \in A \wedge y \in Y) \qquad \qquad \square
\end{aligned}
$$

2.2   Relations

Definition 2.2.1 (Relation). A *relation* **R** between classes **A** and **B** is a subclass of $\mathbf{A} \times \mathbf{B}$.
   A *(binary) relation on* **A** is a relation between **A** and **A**.
   We write $x\mathbf{R}y$ for $(x, y) \in \mathbf{R}$.

2.2.1   Identity Functions

Definition 2.2.2 (Identity Function). For any class **A**, the *identity function* or *diagonal relation* $\mathrm{id}_{\mathbf{A}}$ on **A** is

$$\mathrm{id}_{\mathbf{A}} := \{(x, x) \mid x \in \mathbf{A}\} .$$

2.2.2 Inverses

Definition 2.2.3 (Inverse)**.** The *inverse* of a relation $\mathbf{R}$ between $\mathbf{A}$ and $\mathbf{B}$ is the relation $\mathbf{R}^{-1}$ between $\mathbf{B}$ and $\mathbf{A}$ defined by

$$b\mathbf{R}^{-1}a \Leftrightarrow a\mathbf{R}b \ .$$

Proposition Schema 2.2.4. *For any classes* $\mathbf{A}$*,* $\mathbf{B}$ *and* $\mathbf{R}$*, the following is a theorem:*

If $\mathbf{R}$ *is a relation between* $\mathbf{A}$ *and* $\mathbf{B}$*, we have* $(\mathbf{R}^{-1})^{-1} = \mathbf{R}$*.*

PROOF:
$$\begin{aligned} x(\mathbf{R}^{-1})^{-1}y &\Leftrightarrow y\mathbf{R}^{-1}x \\ &\Leftrightarrow x\mathbf{R}y \end{aligned} \qquad \square$$

2.2.3 Composition

Definition 2.2.5 (Composition)**.** Let $\mathbf{R}$ be a relation between $\mathbf{A}$ and $\mathbf{B}$, and $\mathbf{S}$ be a relation between $\mathbf{B}$ and $\mathbf{C}$. The *composition* $\mathbf{S} \circ \mathbf{R}$ is the relation between $\mathbf{A}$ and $\mathbf{C}$ defined by
$$a(\mathbf{S} \circ \mathbf{R})c \Leftrightarrow \exists b(a\mathbf{R}b \wedge b\mathbf{S}c) \ .$$

Proposition Schema 2.2.6. *For any classes* $\mathbf{A}$*,* $\mathbf{B}$*,* $\mathbf{C}$*,* $\mathbf{R}$ *and* $\mathbf{S}$*, the following is a theorem:*

If $\mathbf{R}$ *is a relation between* $\mathbf{A}$ *and* $\mathbf{B}$*, and* $\mathbf{S}$ *is a relation between* $\mathbf{B}$ *and* $\mathbf{C}$*, then*
$$(\mathbf{S} \circ \mathbf{R})^{-1} = \mathbf{R}^{-1} \circ \mathbf{S}^{-1} \ .$$

PROOF:
$$\begin{aligned} z(\mathbf{S} \circ \mathbf{R})^{-1}x &\Leftrightarrow x(\mathbf{S} \circ \mathbf{R})z \\ &\Leftrightarrow \exists y.(x\mathbf{R}y \wedge y\mathbf{S}z) \\ &\Leftrightarrow \exists y.(y\mathbf{R}^{-1}x \wedge z\mathbf{S}^{-1}y) \\ &\Leftrightarrow z(\mathbf{R}^{-1} \circ \mathbf{S}^{-1})x \end{aligned} \qquad \square$$

2.2.4 Properties of Relaitons

Definition 2.2.7 (Reflexive)**.** Let $\mathbf{R}$ be a binary relation on $\mathbf{A}$. Then $\mathbf{R}$ is *reflexive* on $\mathbf{A}$ iff $\forall x \in \mathbf{A}.(x,x) \in \mathbf{R}$.

Proposition Schema 2.2.8. *For any classes* $\mathbf{A}$ *and* $\mathbf{R}$*, the following is a theorem:*

If $\mathbf{R}$ *is a reflexive relation on* $\mathbf{A}$ *then so is* $\mathbf{R}^{-1}$*.*

PROOF:
$\langle 1 \rangle 1.$ LET: $x \in \mathbf{A}$
$\langle 1 \rangle 2.$ $x\mathbf{R}x$
    PROOF: Since $\mathbf{R}$ is reflexive.

$\langle 1 \rangle 3. \ x \mathbf{R}^{-1} x$
$\square$

Definition 2.2.9 (Irreflexive)**.** A relation $\mathbf{R}$ is *irreflexive* iff there is no x such that $(x, x) \in \mathbf{R}$.

Definition 2.2.10 (Symmetric)**.** A relation $\mathbf{R}$ is *symmetric* iff, whenever $x \mathbf{R} y$, then $y \mathbf{R} x$.

Definition 2.2.11 (Antisymmetric)**.** A relation $\mathbf{R}$ is *antisymmetric* iff, whenever $x \mathbf{R} y$ and $y \mathbf{R} x$, then $x = y$.

Proposition Schema 2.2.12. *For any classes* $\mathbf{A}$ *and* $\mathbf{R}$*, the following is a theorem:*

> *If* $\mathbf{R}$ *is an antisymmetric relation on* $\mathbf{A}$ *then so is* $\mathbf{R}^{-1}$*.*

PROOF:
$\langle 1 \rangle 1.$ ASSUME: $x \mathbf{R}^{-1} y$ and $y \mathbf{R}^{-1} x$
$\langle 1 \rangle 2. \ y \mathbf{R} x$ and $x \mathbf{R} y$
$\langle 1 \rangle 3. \ x = y$
    PROOF: Since $\mathbf{R}$ is antisymmetric.
$\square$

Definition 2.2.13 (Transitive)**.** A relation $\mathbf{R}$ is *transitive* iff, whenever $x \mathbf{R} y$ and $y \mathbf{R} z$, then $x \mathbf{R} z$.

Proposition Schema 2.2.14. *For any classes* $\mathbf{A}$*,* $\mathbf{B}$ *and* $\mathbf{R}$*, the following is a theorem:*

> *If* $\mathbf{R}$ *is a transitive relation between* $\mathbf{A}$ *and* $\mathbf{B}$ *then* $\mathbf{R}^{-1}$ *is transitive.*

PROOF:
$\langle 1 \rangle 1.$ ASSUME: $(x, y), (y, z) \in \mathbf{R}^{-1}$
$\langle 1 \rangle 2. \ (y, x), (z, y) \in \mathbf{R}$
$\langle 1 \rangle 3. \ (z, x) \in \mathbf{R}$
$\langle 1 \rangle 4. \ (x, z) \in \mathbf{R}^{-1}$
$\square$

2.3   n-ary Relations

Definition Schema 2.3.1. For any sets $a_1, \ldots, a_n$, define the *ordered n-tuple* $(a_1, \ldots, a_n)$ by

$$(a_1) := a_1$$
$$(a_1, \ldots, a_n, a_{n+1}) = ((a_1, \ldots, a_n), a_{n+1})$$

Definition Schema 2.3.2. An *n-ary relation on* $\mathbf{A}$ is a class of ordered n-tuples all of whose components are in $\mathbf{A}$.

Chapter 3

Functions

3.1 Functions

Definition 3.1.1 (Function)**.** A *function* from $\mathbf{A}$ to $\mathbf{B}$ is a relation $\mathbf{F}$ between $\mathbf{A}$ and $\mathbf{B}$ such that, for all $x \in \mathbf{A}$, there is only one y such that $x\mathbf{F}y$. We denote this y by $\mathbf{F}(x)$.

A *binary operation* on a class $\mathbf{A}$ is a function $\mathbf{A}^2 \to \mathbf{A}$.

Definition 3.1.2 (Closed)**.** Let $\mathbf{F} : \mathbf{A} \to \mathbf{A}$ be a function and $\mathbf{B} \subseteq \mathbf{A}$. Then $\mathbf{B}$ is *closed* under $\mathbf{F}$ iff $\forall x \in \mathbf{B}.\mathbf{F}(x) \in \mathbf{B}$.

Proposition 3.1.3. *For any class* $\mathbf{A}$*, the following is a theorem:*

$$\mathrm{id}_\mathbf{A} : \mathbf{A} \to \mathbf{A}$$

PROOF: For all $x \in \mathbf{A}$, the only y such that $(x, y) \in \mathrm{id}_\mathbf{A}$ is $y = x$. $\square$

Proposition Schema 3.1.4. *For any classes* $\mathbf{A}$*,* $\mathbf{B}$*,* $\mathbf{C}$*,* $\mathbf{F}$ *and* $\mathbf{G}$*, the following is a theorem:*

Assume $\mathbf{F} : \mathbf{A} \to \mathbf{B}$ *and* $\mathbf{G} : \mathbf{B} \to \mathbf{C}$*. Then* $\mathbf{G} \circ \mathbf{F} : \mathbf{A} \to \mathbf{C}$ *and, for all* $x \in \mathbf{A}$*, we have*

$$(\mathbf{G} \circ \mathbf{F})(x) = \mathbf{G}(\mathbf{F}(x)) \ .$$

PROOF:
$\langle 1 \rangle 1.$ $\forall x \in \mathbf{A}.(x, \mathbf{G}(\mathbf{F}(x))) \in \mathbf{G} \circ \mathbf{F})$
    PROOF: Because $(x, \mathbf{F}(x)) \in \mathbf{F}$ and $(\mathbf{F}(x), \mathbf{G}(\mathbf{F}(x))) \in \mathbf{G}$.
$\langle 1 \rangle 2.$ If $(x, z) \in \mathbf{F} \circ \mathbf{G}$ then $z = \mathbf{G}(\mathbf{F}(x))$
    $\langle 2 \rangle 1.$ PICK $y \in \mathbf{B}$ such that $x\mathbf{F}y$ and $y\mathbf{G}z$
    $\langle 2 \rangle 2.$ $y = \mathbf{F}(x)$
    $\langle 2 \rangle 3.$ $z = \mathbf{G}(y)$
    $\langle 2 \rangle 4.$ $z = \mathbf{G}(\mathbf{F}(x))$
$\square$

Proposition 3.1.5. *For any set A there exists a function $F : \mathcal{P}A - \{\emptyset\} \to A$ (a choice function for A) such that, for every nonempty $B \subseteq A$, we have $F(B) \in B$.*

PROOF:

$\langle 1 \rangle 1$. LET: A be a set.

$\langle 1 \rangle 2$. LET: $\mathcal{A} = \{\{B\} \times B \mid B \in \mathcal{P}A - \{\emptyset\}\}$

$\langle 1 \rangle 3$. Every member of $\mathcal{A}$ is nonempty.

$\langle 1 \rangle 4$. Any two distinct members of $\mathcal{A}$ are disjoint.

$\langle 1 \rangle 5$. PICK a set C such that, for all $X \in \mathcal{A}$, we have $C \cap X$ is a singleton.

   PROOF: Axiom of Choice.

$\langle 1 \rangle 6$. LET: $F = C \cap \bigcup \mathcal{A}$

$\langle 1 \rangle 7$. $F : \mathcal{P}A - \{\emptyset\} \to A$

  $\langle 2 \rangle 1$. F is a function.

    $\langle 3 \rangle 1$. LET: $(B, b), (B, b') \in F$

    $\langle 3 \rangle 2$. $(B, b), (B, b') \in \{B\} \times B$

      PROOF: Since $(B, b), (B, b') \in \bigcup \mathcal{A}$.

    $\langle 3 \rangle 3$. $(B, b), (B, b') \in C \cap (\{B\} \times B)$

    $\langle 3 \rangle 4$. $(B, b) = (B, b')$

      PROOF: From $\langle 1 \rangle 5$.

    $\langle 3 \rangle 5$. $b = b'$

  $\langle 2 \rangle 2$. $\operatorname{dom} F = \mathcal{P}A - \{\emptyset\}$

    PROOF:

$$B \in \operatorname{dom} F$$
$$\Leftrightarrow \exists b. (B, b) \in F$$
$$\Leftrightarrow \exists b. ((B, b) \in \bigcup \mathcal{A} \wedge (B, b) \in C)$$
$$\Leftrightarrow \exists b. \exists B' \in \mathcal{P}A - \{\emptyset\}. ((B, b) \in \{B'\} \times B' \wedge (B, b) \in C)$$
$$\Leftrightarrow B \in \mathcal{P}A - \{\emptyset\} \wedge \exists b \in B. (B, b) \in C$$
$$\Leftrightarrow B \in \mathcal{P}A - \{\emptyset\} \qquad\qquad (\langle 1 \rangle 5)$$

  $\langle 2 \rangle 3$. $\operatorname{ran} F \subseteq A$

$\langle 1 \rangle 8$. For every nonempty $B \subseteq A$ we have $F(B) \in B$

☐

Proposition 3.1.6. *For any relation R between A and B, there exists a function $H : A \to B$ such that $H \subseteq R$ (i.e. $\forall x \in A.xRH(x)$).*

PROOF:

$\langle 1 \rangle 1$. LET: R be a relation between A and B.

$\langle 1 \rangle 2$. PICK a choice function G for B.

$\langle 1 \rangle 3$. Define $H : A \to B$ by $H(x) = G(\{y \mid xRy\})$

$\langle 1 \rangle 4$. $H \subseteq R$

☐

3.1.1   Injective Functions

Definition 3.1.7 (Injective)**.** A function $\mathbf{F} : \mathbf{A} \to \mathbf{B}$ is *one-to-one*, *injective* or an *injection*, $\mathbf{F} : \mathbf{A} \rightarrowtail \mathbf{B}$, iff, for all $x, y \in \mathbf{A}$, if $\mathbf{F}(x) = \mathbf{F}(y)$, then $x = y$.

Proposition 3.1.8. *For any class $\mathbf{A}$, the following is a theorem:*

   $\operatorname{id}_{\mathbf{A}} : \mathbf{A} \to \mathbf{A}$ *is injective.*

PROOF: If $\mathrm{id}_\mathbf{A}(x) = \mathrm{id}_\mathbf{A}(y)$ then immediately $x = y$. □

Proposition Schema 3.1.9. *For any classes* $\mathbf{A}$, $\mathbf{B}$, $\mathbf{C}$, $\mathbf{F}$, $\mathbf{G}$, *the following is a theorem:*

   Assume $\mathbf{F} : \mathbf{A} \rightarrowtail \mathbf{B}$ *and* $\mathbf{G} : \mathbf{B} \rightarrowtail \mathbf{C}$. *Then* $\mathbf{G} \circ \mathbf{F} : \mathbf{A} \rightarrowtail \mathbf{C}$.

PROOF:
$\langle 1 \rangle 1$. LET: $x, y \in \mathbf{A}$
$\langle 1 \rangle 2$. ASSUME: $(\mathbf{G} \circ \mathbf{F})(x) = (\mathbf{G} \circ \mathbf{F})(y)$
$\langle 1 \rangle 3$. $\mathbf{G}(\mathbf{F}(x)) = \mathbf{G}(\mathbf{F}(y))$
$\langle 1 \rangle 4$. $\mathbf{F}(x) = \mathbf{F}(y)$
   PROOF: Since $\mathbf{G}$ is injective.
$\langle 1 \rangle 5$. $x = y$
   PROOF: Since $\mathbf{F}$ is injective.
□

Proposition 3.1.10. *Let* $F : A \to B$ *where* A *is nonempty.* *There exists* $G : B \to A$ *(a* left inverse*) such that* $G \circ F = \mathrm{id}_A$ *if and only if* F *is one-to-one.*

PROOF:
$\langle 1 \rangle 1$. If there exists $G : B \to A$ such that $G \circ F = \mathrm{id}_A$ then F is one-to-one.
   $\langle 2 \rangle 1$. ASSUME: $G : B \to A$ and $G \circ F = I_A$
   $\langle 2 \rangle 2$. LET: $x, y \in A$
   $\langle 2 \rangle 3$. ASSUME: $F(x) = F(y)$
   $\langle 2 \rangle 4$. $x = y$
      PROOF: $x = G(F(x)) = G(F(y)) = y$
$\langle 1 \rangle 2$. If F is one-to-one then there exists $G : B \to A$ such that $G \circ F = I_A$.
   $\langle 2 \rangle 1$. ASSUME: F is one-to-one.
   $\langle 2 \rangle 2$. PICK $a \in A$
   $\langle 2 \rangle 3$. LET: $G : B \to A$ be the function defined by: $G(b)$ is the (unique) $x \in A$
               such that $F(x) = b$ if there exists such an x, $G(b) = a$ otherwise.
   $\langle 2 \rangle 4$. For all $x \in A$ we have $G(F(x)) = x$.
□

3.1.2   Surjective Functions

Definition 3.1.11 (Surjective)**.** Let $F : A \to B$. We say that F is *surjective*, or maps A *onto* B, and write $F : A \twoheadrightarrow B$, iff for all $y \in B$ there exists $x \in A$ such that $F(x) = y$.

Proposition Schema 3.1.12. *For any class* $\mathbf{A}$, *the following is a theorem:*
   $\mathrm{id}_\mathbf{A} : \mathbf{A} \to \mathbf{A}$ *is surjective.*

PROOF: For any $y \in \mathbf{A}$ we have $\mathrm{id}_\mathbf{A}(y) = y$. □

Proposition Schema 3.1.13. *For any classes* $\mathbf{A}$, $\mathbf{B}$, $\mathbf{C}$, $\mathbf{F}$ *and* $\mathbf{G}$, *the following is a theorem:*
   If $\mathbf{F} : \mathbf{A} \twoheadrightarrow \mathbf{B}$ *and* $\mathbf{G} : \mathbf{B} \twoheadrightarrow \mathbf{C}$, *then* $\mathbf{G} \circ \mathbf{F} : \mathbf{A} \twoheadrightarrow \mathbf{C}$.

PROOF:
⟨1⟩1. LET: $c \in \mathbf{C}$
⟨1⟩2. PICK $b \in \mathbf{B}$ such that $\mathbf{G}(b) = c$.
⟨1⟩3. PICK $a \in \mathbf{A}$ such that $\mathbf{F}(a) = b$.
⟨1⟩4. $(\mathbf{G} \circ \mathbf{F})(a) = c$
☐

Proposition 3.1.14. *Let $F : A \to B$. There exists $H : B \to A$ (a* right inverse*) such that $F \circ H = \mathrm{id}_B$ if and only if F maps A onto B.*

PROOF:
⟨1⟩1. If F has a right inverse then F is surjective.
  ⟨2⟩1. ASSUME: F has a right inverse $H : B \to A$.
  ⟨2⟩2. LET: $y \in B$
  ⟨2⟩3. $F(H(y)) = y$
  ⟨2⟩4. There exists $x \in A$ such that $F(x) = y$
⟨1⟩2. If F is surjective then F has a right inverse.
  ⟨2⟩1. ASSUME: F is surjective.
  ⟨2⟩2. PICK a function $H : B \to A$ such that $H \subseteq F^{-1}$
    PROOF: Proposition 3.1.6.
  ⟨2⟩3. $F \circ H = \mathrm{id}_B$
    ⟨3⟩1. LET: $y \in B$
    ⟨3⟩2. $(y, H(y)) \in F^{-1}$
    ⟨3⟩3. $F(H(y)) = y$
☐

3.1.3   Bijections

Definition 3.1.15 (Bijection)**.** Let $\mathbf{F} : \mathbf{A} \to \mathbf{B}$. Then $\mathbf{F}$ is *bijective* or a *bijection*, $\mathbf{F} : \mathbf{A} \approx \mathbf{B}$, iff it is injective and surjective.

Proposition Schema 3.1.16. *For any class $\mathbf{A}$, the following is a theorem:*
    The identity function $\mathrm{id}_{\mathbf{A}} : \mathbf{A} \approx \mathbf{A}$ is a bijection.

PROOF: Proposition 3.1.8 and 3.1.12. ☐

Proposition Schema 3.1.17. *For any classes $\mathbf{A}$, $\mathbf{B}$ and $\mathbf{F}$, the following is a theorem:*
    If $\mathbf{F} : \mathbf{A} \approx \mathbf{B}$ then $\mathbf{F}^{-1} : \mathbf{B} \approx \mathbf{A}$.

PROOF:
⟨1⟩1. $\mathbf{F}^{-1} : \mathbf{B} \to \mathbf{A}$
  ⟨2⟩1. LET: $b \in \mathbf{B}$
  ⟨2⟩2. PICK $a \in \mathbf{A}$ such that $\mathbf{F}(a) = b$.
    PROOF: Since $\mathbf{F}$ is surjective.
  ⟨2⟩3. $(b, a) \in \mathbf{F}^{-1}$
  ⟨2⟩4. If $(b, a') \in \mathbf{F}^{-1}$ then $a' = a$.
    ⟨3⟩1. LET: $a' \in \mathbf{A}$ such that $(b, a') \in \mathbf{F}^{-1}$

$\langle 3 \rangle 2.$ $\mathbf{F}(a') = \mathbf{F}(a)$
$\langle 3 \rangle 3.$ $a' = a$
PROOF: Since $\mathbf{F}$ is injective.
$\langle 1 \rangle 2.$ $\mathbf{F}^{-1}$ is injective.
$\langle 2 \rangle 1.$ LET: $x, y \in \mathbf{B}$
$\langle 2 \rangle 2.$ ASSUME: $\mathbf{F}^{-1}(x) = \mathbf{F}^{-1}(y)$
$\langle 2 \rangle 3.$ $x = y$
PROOF: $x = \mathbf{F}(\mathbf{F}^{-1}(x)) = \mathbf{F}(\mathbf{F}^{-1}(y)) = y$.
$\langle 1 \rangle 3.$ $\mathbf{F}^{-1}$ is surjective.
PROOF: For all $a \in \mathbf{A}$ we have $\mathbf{F}^{-1}(\mathbf{F}(a)) = a$.
□

Proposition Schema 3.1.18. *For any classes* $\mathbf{A}$, $\mathbf{B}$, $\mathbf{C}$, $\mathbf{F}$ *and* $\mathbf{G}$, *the following is a theorem:*
    If $\mathbf{F} : \mathbf{A} \approx \mathbf{B}$ *and* $\mathbf{G} : \mathbf{B} \approx \mathbf{C}$ *then* $\mathbf{G} \circ \mathbf{F} : \mathbf{A} \approx \mathbf{C}$.

PROOF: Propositions 3.1.9 and 3.1.13. □

3.1.4 Restrictions

Definition 3.1.19 (Restriction)**.** Let $\mathbf{F} : \mathbf{A} \to \mathbf{B}$. Let $\mathbf{C} \subseteq \mathbf{A}$. The *restriction* of $\mathbf{F}$ to $\mathbf{C}$, denoted $\mathbf{F} \upharpoonright \mathbf{C}$, is the function

$$\mathbf{F} \upharpoonright \mathbf{C} : \mathbf{C} \to \mathbf{B}$$
$$(\mathbf{F} \upharpoonright \mathbf{C})(x) = \mathbf{F}(x) \qquad\qquad (x \in \mathbf{C})$$

3.1.5 Images

Definition 3.1.20 (Image)**.** Let $\mathbf{F} : \mathbf{A} \to \mathbf{B}$ and $\mathbf{C} \subseteq \mathbf{A}$. The *image* of $\mathbf{C}$ under $\mathbf{F}$ is the class

$$\mathbf{F}(\mathbf{C}) := \{\mathbf{F}(x) \mid x \in \mathbf{C}\} \ .$$

Proposition Schema 3.1.21. *For any classes* $\mathbf{F}$, $\mathbf{A}$ *and* $\mathbf{B}$, *the following is a theorem.*
    If $\mathbf{F} : \mathbf{A} \to \mathbf{B}$, *then for any subset* $S \subseteq \mathbf{A}$, *the class* $\mathbf{F}(S)$ *is a set.*

PROOF: By an Axiom of Replacement. □

Proposition Schema 3.1.22. *For any classes* $\mathbf{A}$, $\mathbf{B}$, $\mathbf{C}$ *and* $\mathbf{F}$, *the following is a theorem:*
    Assume $\mathbf{F} : \mathbf{A} \to \mathbf{B}$ *and* $\mathbf{C} \subseteq \mathcal{P}\mathbf{A}$. *Then*

$$\mathbf{F}\left(\bigcup \mathbf{C}\right) = \{y \mid \exists X \in \mathbf{C}.y \in \mathbf{F}(X)\}$$

3.1.6   Inverse Images

Definition 3.1.27 (Inverse Image)**.** Let $\mathbf{F} : \mathbf{A} \to \mathbf{B}$ and $\mathbf{C} \subseteq \mathbf{B}$. Then the *inverse image* of $\mathbf{C}$ under $\mathbf{F}$ is

$$\mathbf{F}^{-1}(\mathbf{C}) = \{x \in \mathbf{A} \mid \mathbf{F}(x) \in \mathbf{C}\} \ .$$

Proposition Schema 3.1.28. *For any classes* $\mathbf{A}$, $\mathbf{B}$, $\mathbf{C}$ *and* $\mathbf{F}$, *the following is a theorem:*
     Assume $\mathbf{F} : \mathbf{A} \to \mathbf{B}$ *and* $\mathbf{C} \subseteq \mathcal{P}\mathbf{B}$*. Then*

$$\mathbf{F}^{-1}\left(\bigcap \mathbf{C}\right) = \bigcap \{\mathbf{F}^{-1}(X) \mid X \in \mathbf{C}\} \ .$$

Proof:
$$
\begin{aligned}
x \in \mathbf{F}^{-1}\left(\bigcap \mathbf{C}\right) &\Leftrightarrow \mathbf{F}(x) \in \bigcap \mathbf{C} \\
&\Leftrightarrow \forall X \in \mathbf{C}.\mathbf{F}(x) \in X \\
&\Leftrightarrow \forall X \in \mathbf{C}.x \in \mathbf{F}^{-1}(X) \qquad\qquad □
\end{aligned}
$$

Proposition Schema 3.1.29. *For any classes* $\mathbf{A}$, $\mathbf{B}$, $\mathbf{C}$, $\mathbf{D}$ *and* $\mathbf{F}$, *the following is a theorem:*
     Assume $\mathbf{F} : \mathbf{A} \to \mathbf{B}$ *and* $\mathbf{C}, \mathbf{D} \subseteq \mathbf{B}$*. Then*

$$\mathbf{F}^{-1}(\mathbf{C} - \mathbf{D}) = \mathbf{F}^{-1}(\mathbf{C}) - \mathbf{F}^{-1}(\mathbf{D}) \ .$$

Proof:
$$
\begin{aligned}
x \in \mathbf{F}^{-1}(\mathbf{C} - \mathbf{D}) &\Leftrightarrow \mathbf{F}(x) \in \mathbf{C} - \mathbf{D} \\
&\Leftrightarrow \mathbf{F}(x) \in \mathbf{C} \wedge \mathbf{F}(x) \notin \mathbf{D} \\
&\Leftrightarrow x \in \mathbf{F}^{-1}(\mathbf{C}) \wedge x \in \mathbf{F}^{-1}(\mathbf{D}) \\
&\Leftrightarrow x \in \mathbf{F}^{-1}(\mathbf{C}) - \mathbf{F}^{-1}(\mathbf{D}) \qquad\qquad □
\end{aligned}
$$

3.1.7   Function Sets

Proposition 3.1.30. *For any classes* $\mathbf{B}$ *and* $\mathbf{F}$, *the following is a theorem:*
     Let A *be a set. If* $\mathbf{F} : A \to \mathbf{B}$ *then* $\mathbf{F}$ *is a set.*

Proof: By an Axiom of Replacement, we have $R = \{\mathbf{F}(x) \mid x \in A\}$ is a set. Hence $\mathbf{F}$ is a set since $\mathbf{F} \subseteq A \times R$. □

Definition 3.1.31 (Dependent Product Class)**.** Let I be a set and let $\mathbf{H}(i)$ be a class for all $i \in I$. We write $\prod_{i \in I} \mathbf{H}(i)$ for the class of all functions $f : I \to \bigcup_{i \in I} \mathbf{H}(i)$ such that $\forall i \in I.f(i) \in \mathbf{H}(i)$.
     We write $\mathbf{B}^I$ for $\prod_{i \in I} \mathbf{B}$ where $\mathbf{B}$ does not depend on I.

Proposition Schema 3.1.32. *Let I be a set. Let $\mathbf{H}(i)$ be a set for every $i \in I$. Then $\prod_{i \in I} \mathbf{H}(i)$ is a set.*

PROOF:
⟨1⟩1. $\{\mathbf{H}(i) \mid i \in I\}$ is a set.
  PROOF: By an Axiom of Replacement.
⟨1⟩2. $\bigcup_{i \in I} \mathbf{H}(i)$ is a set.
⟨1⟩3. $\prod_{i \in I} \mathbf{H}(i)$ is a set.
  PROOF: It is a subset of $\mathcal{P} \left(I \times \bigcup_{i \in I} \mathbf{H}(i) \right)$.
☐

Proposition 3.1.33. *Let I be a set. Let $H(i)$ be a set for all $i \in I$. If $\forall i \in I.H(i) \neq \emptyset$ then $\prod_{i \in I} H(i) \neq \emptyset$.*

PROOF:
⟨1⟩1. ASSUME: $\forall i \in I.H(i) \neq \emptyset$
⟨1⟩2. LET: $R = \{(i, x) \mid i \in I, x \in H(i)\}$
⟨1⟩3. PICK a function $f : I \to \bigcup_{i \in I} H(i)$ such that $f \subseteq R$
  PROOF: Proposition 3.1.6.
⟨1⟩4. $f \in \prod_{i \in I} H(i)$
☐

3.2 Equinumerosity

Definition 3.2.1 (Equinumerous)**.** Sets A and B are *equinumerous*, $A \approx B$, iff there exists a bijection between A and B.

Theorem 3.2.2 (Cantor 1873)**.** *No set is equinumerous to its power set.*

PROOF:
⟨1⟩1. ASSUME: for a contradiction $f : A \approx \mathcal{P}A$
⟨1⟩2. LET: $S = \{x \in A \mid x \notin f(x)\}$
⟨1⟩3. PICK $a \in A$ such that $f(a) = S$
⟨1⟩4. $a \in S$ if and only if $a \notin S$
⟨1⟩5. Q.E.D.
  PROOF: This is a contradiction.
☐

3.3 Domination

Definition 3.3.1 (Dominate)**.** A set A is *dominated* by a set B, $A \preccurlyeq B$, iff there exists an injection $A \to B$.

Proposition 3.3.2. *Given sets A and B, if $A \neq \emptyset$ or $B = \emptyset$, then we have $A \preccurlyeq B$ iff there exists a surjective function $B \to A$.*

PROOF:

⟨1⟩1. If $A \preccurlyeq B$ and $A \neq \emptyset$ then there exists a surjective function $B \to A$.

   ⟨2⟩1. ASSUME: $f : A \to B$ be injective.

   ⟨2⟩2. PICK $a \in A$

   ⟨2⟩3. LET: $g : B \to A$ be the function defined by $g(b) = f^{-1}(b)$ if $b \in \operatorname{ran} f$,
            and $g(b) = a$ otherwise.

   ⟨2⟩4. g is surjective.

⟨1⟩2. If there exists a surjective function $B \to A$ then $A \preccurlyeq B$.

   ⟨2⟩1. ASSUME: there exists a surjective function $g : B \to A$

   ⟨2⟩2. $\forall a \in A.\exists b \in B.g(b) = a$

   ⟨2⟩3. Choose a function $f : A \to B$ such that $\forall a \in A.g(f(a)) = a$

   ⟨2⟩4. f is injective.

Chapter 4

Equivalence Relations

Definition 4.0.1 (Equivalence Relation)**.** An *equivalence relation* on a class $\mathbf{A}$ is a binary relation on $\mathbf{A}$ that is reflexive, symmetric and transitive.

Proposition 4.0.2. *Equinumerosity is an equivalence relation on the class of all sets.*

PROOF: Propositions 3.1.16, 3.1.17, 3.1.18. □

Definition 4.0.3 (Respects)**.** Let $\mathbf{R}$ be an equivalence relation on $\mathbf{A}$ and $\mathbf{F}$: $\mathbf{A} \to \mathbf{B}$. Then $\mathbf{F}$ *respects* $\mathbf{A}$ iff, whenever $(x, y) \in \mathbf{R}$, then $\mathbf{F}(x) = \mathbf{F}(y)$.

Definition 4.0.4 (Equivalence Class)**.** Let $\mathbf{R}$ be an equivalence relation on $\mathbf{A}$ and $a \in \mathbf{A}$. The *equivalence class* of *a modulo* $\mathbf{R}$ is

$$[a]_{\mathbf{R}} := \{x \mid a\mathbf{R}x\} \ .$$

Proposition Schema 4.0.5. *For any classes $\mathbf{A}$ and $\mathbf{R}$, the following is a theorem.*

Assume $\mathbf{R}$ be an equivalence relation on $\mathbf{A}$. Let $a, b \in \mathbf{A}$. Then $[a]_{\mathbf{R}} = [b]_{\mathbf{R}}$ if and only if $a\mathbf{R}b$.

PROOF:
⟨1⟩1. If $[a]_{\mathbf{R}} = [b]_{\mathbf{R}}$ then $a\mathbf{R}b$.
  ⟨2⟩1. ASSUME: $[a]_{\mathbf{R}} = [b]_{\mathbf{R}}$
  ⟨2⟩2. $b\mathbf{R}b$
    PROOF: Reflexivity
  ⟨2⟩3. $b \in [b]_{\mathbf{R}}$
  ⟨2⟩4. $b \in [a]_{\mathbf{R}}$
  ⟨2⟩5. $a\mathbf{R}b$
⟨1⟩2. If $a\mathbf{R}b$ then $[a]_{\mathbf{R}} = [b]_{\mathbf{R}}$.
  ⟨2⟩1. For all $x, y \in \mathbf{A}$, if $x\mathbf{R}y$ then $[y]_{\mathbf{R}} \subseteq [x]_{\mathbf{R}}$
    ⟨3⟩1. LET: $x, y \in \mathbf{A}$
    ⟨3⟩2. ASSUME: $x\mathbf{R}y$

$\langle 3 \rangle 3$. LET: $t \in [y]_{\mathbf{R}}$
$\langle 3 \rangle 4$. $y\mathbf{R}t$
$\langle 3 \rangle 5$. $x\mathbf{R}t$
   PROOF: Transitivity, $\langle 3 \rangle 2$, $\langle 3 \rangle 4$.
$\langle 3 \rangle 6$. $t \in [x]_{\mathbf{R}}$
$\langle 2 \rangle 2$. ASSUME: $a\mathbf{R}b$
$\langle 2 \rangle 3$. $[b]_{\mathbf{R}} \subseteq [a]_{\mathbf{R}}$
   PROOF: $\langle 2 \rangle 1$, $\langle 2 \rangle 2$.
$\langle 2 \rangle 4$. $b\mathbf{R}a$
   PROOF: Symmetry, $\langle 2 \rangle 2$.
$\langle 2 \rangle 5$. $[a]_{\mathbf{R}} \subseteq [b]_{\mathbf{R}}$
   PROOF: $\langle 2 \rangle 1$, $\langle 2 \rangle 4$.
$\langle 2 \rangle 6$. $[a]_{\mathbf{R}} = [b]_{\mathbf{R}}$
   PROOF: $\langle 2 \rangle 3$, $\langle 2 \rangle 5$.
☐

Definition 4.0.6 (Partition)**.** A *partition* Π of a set A is a set of nonempty subsets of A that is disjoint and exhaustive, i.e.

1. no two different sets in Π have any common elements, and

2. each element of A is in some set in Π.

Definition 4.0.7. Let R be an equivalence relation on a set A. The *quotient set A/R* is the set of all equivalence classes.

Theorem 4.0.8. *Let A be a set and $\mathbf{B}$ a class. Let R be an equivalence relation on A and $F : A \to \mathbf{B}$. Then F respects R if and only if there exists $\hat{F} : A/R \to \mathbf{B}$ such that*

$$\forall a \in A.\hat{F}([a]_R) = F(a) \ .$$

In this case, $\hat{F}$ is unique.

PROOF:
$\langle 1 \rangle 1$. If F respects R then there exists $\hat{F} : A/R \to \mathbf{B}$ such that $\forall a \in A.\hat{F}([a]_R) = F(a)$.
  $\langle 2 \rangle 1$. ASSUME: F respects R.
  $\langle 2 \rangle 2$. LET: $\hat{F} = \{([a]_R, F(a)) \mid a \in A\}$
  $\langle 2 \rangle 3$. $\hat{F}$ is a function.
    $\langle 3 \rangle 1$. ASSUME: $a, a' \in A$ and $[a]_R = [a']_R$
      PROVE: $F(a) = F(a')$
    $\langle 3 \rangle 2$. $(a, a') \in R$
      PROOF: Proposition 4.0.5.
    $\langle 3 \rangle 3$. $F(a) = F(a')$
      PROOF: $\langle 2 \rangle 1$
  $\langle 2 \rangle 4$. dom $\hat{F} = A/R$
  $\langle 2 \rangle 5$. ran $\hat{F} \subseteq \mathbf{B}$
  $\langle 2 \rangle 6$. $\forall a \in A.\hat{F}([a]_R) = F(a)$

$\langle 1 \rangle 2$. If there exists $\hat{F} : A/R \to \mathbf{B}$ such that $\forall a \in A.\hat{F}([a]_R) = F(a)$ then F respects R.

   $\langle 2 \rangle 1$. Assume: $\hat{F} : A/R \to \mathbf{B}$ and $\forall a \in A.\hat{F}([a]_R) = F(a)$

   $\langle 2 \rangle 2$. Let: $a, a' \in A$

   $\langle 2 \rangle 3$. Assume: $(a, a') \in R$

   $\langle 2 \rangle 4$. $[a]_R = [a']_R$

     Proof: Proposition 4.0.5.

   $\langle 2 \rangle 5$. $F(a) = F(a')$

     Proof: $\langle 2 \rangle 1$

$\langle 1 \rangle 3$. If $G, H : A/R \to \mathbf{B}$ and $\forall a \in A.G([a]_R) = H([a]_R)$ then $G = H$.

□

Proposition 4.0.9. *Let R be an equivalence relation on a set A. Then A/R is a partition of A.*

Proof:

$\langle 1 \rangle 1$. Every member of A/R is nonempty.

   Proof: Since $a \in [a]_R$ by reflexivity.

$\langle 1 \rangle 2$. No two different sets in A/R have any common elements.

   $\langle 2 \rangle 1$. Let: $[a]_R, [b]_R \in A/R$

   $\langle 2 \rangle 2$. Let: $c \in [a]_R \cap [b]_R$

     Prove: $[a]_R = [b]_R$

   $\langle 2 \rangle 3$. aRc

     Proof: $\langle 2 \rangle 2$

   $\langle 2 \rangle 4$. bRc

     Proof: $\langle 2 \rangle 2$

   $\langle 2 \rangle 5$. cRb

     Proof: Symmetry, $\langle 2 \rangle 4$

   $\langle 2 \rangle 6$. aRb

     Proof: Transitivity, $\langle 2 \rangle 3$, $\langle 2 \rangle 5$

   $\langle 2 \rangle 7$. $[a]_R = [b]_R$

     Proof: Proposition 4.0.5, $\langle 2 \rangle 6$

$\langle 1 \rangle 3$. Each element of A is in some set in A/R.

   Proof: Since $a \in [a]_R$ by reflexivity.

□

Proposition 4.0.10. *For any partition P of a set A, there exists a unique equivalence relation R on A such that $A/R = P$, namely xRy iff $\exists X \in P(x \in X \wedge y \in X)$.*

Proof: Easy. □

Definition 4.0.11 (Natural Map)**.** Let A be a set and R an equivalence relation on A. The *natural map* $A \to A/R$ is the function that maps $a \in A$ to $[a]_R$.

Chapter 5

Ordering Relations

5.1 Partial Orders

Definition 5.1.1 (Partial Ordering)**.** Let **A** be a class. A *partial ordering* on **A** is a relation **R** on **A** that is reflexive, antisymmetric and transitive.

We often write $\leq$ for a partial ordering, and then write $x < y$ for $x \leq y \wedge x \neq y$.

Proposition Schema 5.1.2. *For any classes* **A** *and* **R***, the following is a theorem:*

If **R** *is a partial order on* **A** *then so is* $\mathbf{R}^{-1}$*.*

PROOF:
$\langle 1 \rangle 1.$ $\mathbf{R}^{-1}$ is reflexive.
   PROOF: Proposition 2.2.8.
$\langle 1 \rangle 2.$ $\mathbf{R}^{-1}$ is antisymmetric.
   PROOF: Proposition 2.2.12.
$\langle 1 \rangle 3.$ $\mathbf{R}^{-1}$ is transitive.
   $\langle 2 \rangle 1.$ ASSUME: $x\mathbf{R}^{-1}y$ and $y\mathbf{R}^{-1}z$
   $\langle 2 \rangle 2.$ $y\mathbf{R}x$ and $z\mathbf{R}y$
   $\langle 2 \rangle 3.$ $z\mathbf{R}x$
      PROOF: Since **R** is transitive.
   $\langle 2 \rangle 4.$ $x\mathbf{R}^{-1}z$
□

Proposition Schema 5.1.3. *For any classes* **A***,* **B***,* **F** *and* **R***, the following is a theorem:*

Assume **R** *is a partial order on* **B** *and* $\mathbf{F} : \mathbf{A} \to \mathbf{B}$ *is injective. Define* **S** *on* **A** *by* $x\mathbf{S}y$ *iff* $\mathbf{F}(x)\mathbf{R}\mathbf{F}(y)$*. Then* **S** *is a partial order on* **A***.*

PROOF:
$\langle 1 \rangle 1.$ **S** is reflexive.
   PROOF: For any $x \in \mathbf{A}$ we have $\mathbf{F}(x)\mathbf{R}\mathbf{F}(x)$.

$\langle 1 \rangle 2$. **S** is antisymmetric.
  $\langle 2 \rangle 1$. LET: $x, y \in \mathbf{A}$
  $\langle 2 \rangle 2$. ASSUME: $x\mathbf{S}y$ and $y\mathbf{S}x$
  $\langle 2 \rangle 3$. $\mathbf{F}(x)\mathbf{R}\mathbf{F}(y)$ and $\mathbf{F}(y)\mathbf{R}\mathbf{F}(x)$
  $\langle 2 \rangle 4$. $\mathbf{F}(x) = \mathbf{F}(y)$
     PROOF: **R** is antisymmetric.
  $\langle 2 \rangle 5$. $x = y$
$\langle 1 \rangle 3$. **S** is transitive.
□

Corollary Schema 5.1.3.1. *For any classes* **A**, **B** *and* **R**, *the following is a theorem:*

   Assume **R** *be a partial order on* **A** *and* $\mathbf{B} \subseteq \mathbf{A}$. *Then* $\mathbf{R} \cap \mathbf{B}^2$ *is a partial order on* **B**.

Definition 5.1.4 (Partially Ordered Set). A *partially ordered set* or *poset* is a pair $(A, \leq)$ where A is a set and $\leq$ is a partial ordering on A. We often write just A for $(A, \leq)$.
   If $(A, \leq)$ is a poset and $B \subseteq A$ we write just B for the poset $(B, \leq \cap B^2)$.

Definition 5.1.5 (Strictly Monotone). Let $(A, <_A)$ and $(B, <_B)$ be posets. A function $f : A \rightarrow B$ is *strictly monotone* iff, whenever $x <_A y$, then $f(x) <_B f(y)$.

Definition 5.1.6 (Minimal). Let $\leq$ be a partial order on **A**. An element $m \in \mathbf{A}$ is *minimal* iff there is no $x \in \mathbf{A}$ such that $x < m$.

Definition 5.1.7 (Maximal). Let $\leq$ be a partial order on **A**. An element $m \in \mathbf{A}$ is *maximal* iff there is no $x \in \mathbf{A}$ such that $m < x$.

Definition 5.1.8 (Least). Let $\leq$ be a partial order on **A**. An element $m \in \mathbf{A}$ is *least* iff for all $x \in \mathbf{A}$ we have $m \leq x$.

Proposition 5.1.9. *A partial order has at most one least element.*

PROOF: If m and m' are least then $m \leq m'$ and $m' \leq m$, so $m = m'$. □

Definition 5.1.10 (Greatst). Let $\leq$ be a partial order on **A**. An element $m \in \mathbf{A}$ is *greatest* iff for all $x \in A$ we have $x \leq m$.

Proposition 5.1.11. *A poset has at most one greatest element.*

PROOF: If m and m' are greatest then $m \leq m'$ and $m' \leq m$, so $m = m'$. □

Definition 5.1.12 (Upper Bound). Let $\leq$ be a partial ordering on **A** and $\mathbf{B} \subseteq \mathbf{A}$. Let $u \in \mathbf{A}$. Then u is an *upper bound* for **B** iff $\forall x \in \mathbf{B}.x \leq u$.

Definition 5.1.13 (Lower Bound). Let $\leq$ be a partial ordering on **A** and $\mathbf{B} \subseteq \mathbf{A}$. Let $l \in \mathbf{A}$. Then l is a *lower bound* for **B** iff $\forall x \in \mathbf{B}.l \leq x$.

Definition 5.1.14 (Bounded Above). Let $\leq$ be a partial ordering on **A** and $\mathbf{B} \subseteq \mathbf{A}$. Then **B** is *bounded above* iff it has an upper bound.

Definition 5.1.15 (Bounded Below)**.** Let $\leq$ be a partial ordering on **A** and **B** $\subseteq$ **A**. Then **B** is *bounded below* iff it has a lower bound.

Definition 5.1.16 (Least Upper Bound)**.** Let $\leq$ be a partial ordering on **A** and **B** $\subseteq$ **A**. Let $s \in$ **A**. Then s is the *least upper bound* or *supremum* of **B** iff s is an upper bound for **B** and, for every upper bound u for **B**, we have $s \leq u$.

Definition 5.1.17 (Greatest Lower Bound)**.** Let $\leq$ be a partial ordering on **A** and **B** $\subseteq$ **A**. Let $i \in$ **A**. Then i is the *greatest lower bound* or *infimum* of **B** iff i is a lower bound for **B** and, for every lower bound l for **B**, we have $i \leq l$.

Definition 5.1.18 (Complete)**.** A partial order is *complete* iff every nonempty subset bounded above has a supremum, and every nonempty subset bounded below has an infimum.

Definition 5.1.19 (Order Isomorphism)**.** Let A and B be posets. An *order isomorphism* between A and B, $f : A \cong B$, is a bijection $f : A \approx B$ such that f and f^{-1} are monotone.

Theorem 5.1.20 (Knaster Fixed-Point Theorem)**.** *Let A be a complete poset with a greatest and least element. Let $\phi : A \to A$ be monotone. Then there exists $a \in A$ such that $\phi(a) = a$.*

PROOF:
$\langle 1 \rangle 1.$ LET: $B = \{x \in A \mid x \leq \phi(x)\}$
$\langle 1 \rangle 2.$ LET: $a = \sup B$
   PROOF: B is nonempty because the least element of A is in B, and it is bounded above by the greatest element of A.
$\langle 1 \rangle 3.$ For all $b \in B$ we have $b \leq \phi(a)$
   $\langle 2 \rangle 1.$ LET: $b \in B$
   $\langle 2 \rangle 2.$ $b \leq \phi(b)$
   $\langle 2 \rangle 3.$ $b \leq a$
   $\langle 2 \rangle 4.$ $\phi(b) \leq \phi(a)$
   $\langle 2 \rangle 5.$ $b \leq \phi(a)$
$\langle 1 \rangle 4.$ $a \leq \phi(a)$
$\langle 1 \rangle 5.$ $\phi(a) \leq \phi(\phi(a))$
$\langle 1 \rangle 6.$ $\phi(a) \in B$
$\langle 1 \rangle 7.$ $\phi(a) \leq a$
$\langle 1 \rangle 8.$ $\phi(a) = a$
□

Definition 5.1.21 (Dense)**.** Let $\leq$ be a partial order on **A** and **B** $\subseteq$ **A**. Then **B** is *dense* iff, for all $x, y \in$ **A**, if $x < y$ then there exists $z \in$ **B** such that $x < z < y$.

Proposition 5.1.22. *Let A be a complete poset with no least element. Let $B \subseteq A$ be dense. Let $\theta : A \to A$ be a monotone map that is the identity on B. Then $\theta = \mathrm{id}_A$.*

PROOF:

⟨1⟩1. LET: $a \in A$
    PROVE: $\theta(a) = a$
⟨1⟩2. LET: $S(a) = \{b \in B \mid b < a\}$
⟨1⟩3. $S(a)$ is nonempty and bounded above.
    ⟨2⟩1. $S(a)$ is nonempty.
        ⟨3⟩1. PICK $a_1 < a$
            PROOF: Since a is not least.
        ⟨3⟩2. There exists $b \in B$ such that $a_1 < b < a$.
    ⟨2⟩2. $S(a)$ is bounded above by a.
⟨1⟩4. $\sup S(a) \leq a$
⟨1⟩5. $\sup S(a) = a$
    ⟨2⟩1. ASSUME: for a contradiction $\sup S(a) < a$
    ⟨2⟩2. PICK $b \in B$ such that $\sup S(a) < b < a$
    ⟨2⟩3. $b \in S(a)$
    ⟨2⟩4. Q.E.D.
        PROOF: This contradicts the fact that $\sup S(a) < b$.
⟨1⟩6. For all $b \in S(a)$ we have $b \leq \theta(a)$
    ⟨2⟩1. LET: $b \in S(a)$
    ⟨2⟩2. $b < a$
    ⟨2⟩3. $\theta(b) \leq \theta(a)$
    ⟨2⟩4. $b \leq \theta(a)$
        PROOF: $\theta(b) = b$
⟨1⟩7. $a \leq \theta(a)$
    PROOF: Since $a = \sup S(a)$ and $\theta(a)$ is an upper bound for $S(a)$.
⟨1⟩8. $a \not< \theta(a)$
    ⟨2⟩1. ASSUME: for a contradiction $a < \theta(a)$.
    ⟨2⟩2. PICK $b \in B$ such that $a < b < \theta(a)$
    ⟨2⟩3. $\theta(a) \leq \theta(b) = b$
    ⟨2⟩4. Q.E.D.
        PROOF: This contradicts the fact that $b < \theta(a)$.
⟨1⟩9. $\theta(a) = a$
□

Theorem 5.1.23. *Let A and P be complete posets with no least or greatest element. Let B be dense in A and Q be dense in P. Every order isomorphism $\phi : B \cong Q$ extends uniquely to an order isomorphism $A \cong P$.*

PROOF:
⟨1⟩1. For $a \in A$, let $S(a) = \{b \in B \mid b < a\}$.
⟨1⟩2. Define $\overline{\phi} : A \to P$ by $\overline{\phi}(a) = \sup \phi(S(a))$.
    ⟨2⟩1. $\phi(S(a))$ is nonempty.
        ⟨3⟩1. PICK $a_1 < a$
            PROOF: Since a is not least.

Definition 5.1.24 (Initial Segment)**.** Let $\leq$ be a partial order on $\mathbf{A}$ and $t \in A$.

The *initial segment* up to t is the class

$$\operatorname{seg} t := \{x \in \mathbf{A} \mid x < t\} \ .$$

Definition 5.1.25 (Lexicographic Ordering). Let $\mathbf{R}$ be a partial order on $\mathbf{A}$ and $\mathbf{S}$ a partial order on $\mathbf{B}$. The *lexicographic ordering* $\leq$ on $\mathbf{A} \times \mathbf{B}$ is defined by:

$$(a,b) \leq (a',b') \Leftrightarrow (a\mathbf{R}a' \wedge a \neq a') \vee (a = a' \wedge b\mathbf{S}b') \ .$$

Proposition Schema 5.1.26. *For any classes* $\mathbf{A}$, $\mathbf{B}$, $\mathbf{R}$ *and* $\mathbf{S}$, *the following is a theorem:*

If $\mathbf{R}$ *is a partial order on* $\mathbf{A}$ *and* $\mathbf{S}$ *is a partial order on* $\mathbf{B}$ *then the lexicographic ordering on* $\mathbf{A} \times \mathbf{B}$ *is a partial order.*

Proof:
$\langle 1 \rangle 1$. Let: $\leq$ be the lexicographic ordering on $\mathbf{A} \times \mathbf{B}$
$\langle 1 \rangle 2$. $\leq$ is reflexive.
  Proof: For any $a \in \mathbf{A}$ and $b \in \mathbf{B}$ we have $a = a$ and $b\mathbf{S}b$, so $(a,b) \leq (a,b)$.
$\langle 1 \rangle 3$. $\leq$ is antisymmetric.
  $\langle 2 \rangle 1$. Assume: $(a,b) \leq (a',b')$ and $(a',b') \leq (a,b)$
  $\langle 2 \rangle 2$. $(a\mathbf{R}a' \wedge a \neq a') \vee (a = a' \wedge b\mathbf{S}b')$
  $\langle 2 \rangle 3$. $(a'\mathbf{R}a \wedge a' \neq a) \vee (a' = a \wedge b\mathbf{S}b')$
  $\langle 2 \rangle 4$. Case: $a = a'$
    Proof: Then $b\mathbf{S}b'$ and $b'\mathbf{S}b$ hence $b = b'$ and $(a,b) = (a',b')$.
  $\langle 2 \rangle 5$. Case: $a \neq a'$
    Proof: Then $a\mathbf{R}a'$ and $a'\mathbf{R}a$ hence $a = a'$ which is a contradiction.
$\langle 1 \rangle 4$. $\leq$ is transitive.
  $\langle 2 \rangle 1$. Assume: $(a_1,b_1) \leq (a_2,b_2) \leq (a_3,b_3)$
  $\langle 2 \rangle 2$. $(a_1\mathbf{R}a_2 \wedge a_1 \neq a_2) \vee (a_1 = a_2 \wedge b_1\mathbf{S}b_2)$
  $\langle 2 \rangle 3$. $(a_2\mathbf{R}a_3 \wedge a_2 \neq a_3) \vee (a_2 = a_3 \wedge b_2\mathbf{S}b_3)$
  $\langle 2 \rangle 4$. Case: $a_1\mathbf{R}a_2, a_1 \neq a_2, a_2\mathbf{R}a_3, a_2 \neq a_3$
    $\langle 3 \rangle 1$. $a_1\mathbf{R}a_3$
      Proof: Since $\mathbf{R}$ is transitive.
    $\langle 3 \rangle 2$. $a_1 \neq a_3$
      Proof: If $a_1 = a_3$ then $a_1\mathbf{R}a_2$ and $a_2\mathbf{R}a_1$ so $a_1 = a_2$ which is a contradiction.
  $\langle 2 \rangle 5$. Case: $a_1\mathbf{R}a_2, a_1 \neq a_2, a_2 = a_3, b_2\mathbf{S}b_3$
    Proof: Then $a_1\mathbf{R}a_3$ and $a_1 \neq a_3$.
  $\langle 2 \rangle 6$. Case: $a_1 = a_2, b_1\mathbf{S}b_2, a_2\mathbf{R}a_3, a_2 \neq a_3$
    Proof: Then $a_1\mathbf{R}a_3$ and $a_1 \neq a_3$.
  $\langle 2 \rangle 7$. Case: $a_1 = a_2, b_1\mathbf{S}b_2, a_2 = a_3, b_2\mathbf{S}b_3$
    Proof: Then $a_1 = a_3$ and $b_1\mathbf{S}b_3$.
$\square$

5.2 Linear Orders

Definition 5.2.1 (Linear Ordering). Let **A** be a class. A *linear ordering* or *total ordering* on **A** is a partial ordering $\leq$ on **A** that is *total*, i.e.

$$\forall x, y \in \mathbf{A}.x \leq y \vee y \leq x$$

We often use the symbol $<$ for a linear ordering, and then write $x < y$ for $(x, y) \in <$.

Proposition Schema 5.2.2 (Trichotomy)**.** *For any classes* **A** *and* $\leq$*, the following is a theorem:*

   Assume $\leq$ *be a linear ordering on* **A***. For any* $x, y \in \mathbf{A}$*, exactly one of* $x < y$*,* $x = y$*,* $y < x$ *holds.*

PROOF: Immediate from definitions. □

Proposition Schema 5.2.3. *For any classes* **A** *and* $<$*, the following is a theorem:*

   Let $<$ *be a transitive relation on* **A** *that satisfies trichotomy. Define* $\leq$ *on* **A** *by* $x \leq y$ *iff* $x < y$ *or* $x = y$*. Then* $\leq$ *is a linear ordering on* **A** *and* $x < y$ *iff* $x \leq y$ *and* $x \neq y$*.*

PROOF:
$\langle 1 \rangle 1.$ $\leq$ is reflexive.
   PROOF: By definition we have $\forall x \in \mathbf{A}.x \leq x$.
$\langle 1 \rangle 2.$ $\leq$ is antisymmetric.
   $\langle 2 \rangle 1.$ ASSUME: $x \leq y$ and $y \leq x$
   $\langle 2 \rangle 2.$ $x < y$ or $x = y$
   $\langle 2 \rangle 3.$ $y < x$ or $y = x$
   $\langle 2 \rangle 4.$ We cannot have $x < y$ and $y < x$
      PROOF: Trichotomy.
   $\langle 2 \rangle 5.$ $x = y$
$\langle 1 \rangle 3.$ $\leq$ is transitive.
   $\langle 2 \rangle 1.$ ASSUME: $x \leq y$ and $y \leq z$
   $\langle 2 \rangle 2.$ $x < y$ or $x = y$
   $\langle 2 \rangle 3.$ $y < z$ or $y = z$
   $\langle 2 \rangle 4.$ CASE: $x < y$ and $y < z$
      PROOF: Then $x < z$ by transitivity, so $x \leq z$.
   $\langle 2 \rangle 5.$ CASE: $x = y$
      PROOF: Then we have $y \leq z$ and so $x \leq z$.
   $\langle 2 \rangle 6.$ CASE: $y = z$
      PROOF: Then we have $x \leq y$ and so $x \leq z$.
$\langle 1 \rangle 4.$ $\leq$ is total.
   PROOF: Immediate from trichotomy.
□

Proposition Schema 5.2.4. *For any classes* **A** *and* **R***, the following is a theorem:*

   If **R** *is a linear ordering on* **A** *then* $\mathbf{R}^{-1}$ *is also a linear ordering on* **A***.*

PROOF:

⟨1⟩1. $\mathbf{R}^{-1}$ is a partial order on $\mathbf{A}$.
　　PROOF: Proposition 5.1.2.
⟨1⟩2. $\mathbf{R}^{-1}$ is total.
　　⟨2⟩1. LET: $x, y \in \mathbf{A}$
　　⟨2⟩2. $x\mathbf{R}y$ or $y\mathbf{R}x$.
　　⟨2⟩3. $y\mathbf{R}^{-1}x$ or $x\mathbf{R}^{-1}y$.
□

Proposition Schema 5.2.5. *For any classes* $\mathbf{A}$, $\mathbf{B}$, $\mathbf{F}$, $\mathbf{R}$, $\mathbf{S}$, *the following is a theorem:*

　　Assume $\mathbf{R}$ *is a linear order on* $\mathbf{A}$, $\mathbf{S}$ *is a partial order on* $\mathbf{B}$, *and* $\mathbf{F} : \mathbf{A} \to \mathbf{B}$. *If* $\mathbf{F}$ *is strictly monotone then it is injective.*

PROOF:

⟨1⟩1. LET: $x, y \in \mathbf{A}$
⟨1⟩2. ASSUME: $x \neq y$
　　　PROVE:　$\mathbf{F}(x) \neq \mathbf{F}(y)$
⟨1⟩3. ASSUME: w.l.o.g. $x\mathbf{R}y$
　　PROOF: $\mathbf{R}$ is total.
⟨1⟩4. $\mathbf{F}(x)\mathbf{S}\mathbf{F}(y)$ and $\mathbf{F}(x) \neq \mathbf{F}(y)$
　　PROOF: $\mathbf{F}$ is strictly monotone.
□

Proposition Schema 5.2.6. *For any classes* $\mathbf{A}$, $\mathbf{B}$, $\leq$, $\preccurlyeq$ *and* $\mathbf{F}$, *the following is a theorem:*

　　Assume $\leq$ *is a linear order on* $\mathbf{A}$ *and* $\preccurlyeq$ *is a linear order on* $\mathbf{B}$. *Assume* $\mathbf{F} : \mathbf{A} \to \mathbf{B}$ *and* $\mathbf{F}$ *is strictly monotone. For all* $x, y \in \mathbf{A}$, *if* $\mathbf{F}(x) \prec \mathbf{F}(y)$ *then* $x < y$.

PROOF:

⟨1⟩1. $\mathbf{F}(x) \neq \mathbf{F}(y)$ and $\mathbf{F}(y) \nprec \mathbf{F}(x)$
　　PROOF: Trichotomy.
⟨1⟩2. $x \neq y$ and $y \not< x$
　　PROOF: $\mathbf{F}$ is strictly monotone.
⟨1⟩3. $x < y$
　　PROOF: Trichotomy.
□

Corollary Schema 5.2.6.1. *For any classes* $\mathbf{A}$, $\mathbf{B}$, $\leq$, $\preccurlyeq$ *and* $\mathbf{F}$, *the following is a theorem:*

　　Assume $\leq$ *is a linear order on* $\mathbf{A}$ *and* $\preccurlyeq$ *is a linear order on* $\mathbf{B}$. *Assume* $\mathbf{F} : \mathbf{A} \to \mathbf{B}$ *and* $\mathbf{F}$ *is strictly monotone. Then* $\mathbf{F}$ *is an order isomorphism.*

Proposition Schema 5.2.7. *For any classes* $\mathbf{A}$, $\mathbf{B}$, $\mathbf{F}$ *and* $\mathbf{S}$, *the following is a theorem:*

Chapter 6

Ordinal Numbers

6.1 Ordinals

Definition 6.1.1 (Ordinal Number). An *ordinal (number)* is a transitive set α that is *well-ordered by* $\in$; that is, such that $\{(x,y) \in \alpha^2 \mid x \in y \lor x = y\}$ well orders α.

Given $x, y \in \alpha$, we write $x < y$ iff $x \in y$, and $x \leq y$ iff $x \in y$ or $x = y$.

Let **On** be the class of ordinal numbers. For $\alpha, \beta \in$ **On**, we write $\alpha < \beta$ iff $\alpha \in \beta$, and $\alpha \leq \beta$ iff $\alpha < \beta$ or $\alpha = \beta$.

Proposition 6.1.2. *For any ordinal numbers α and β, if $\alpha \cong \beta$ then $\alpha = \beta$.*

PROOF:
$\langle 1 \rangle 1$. LET: $f : \alpha \cong \beta$
$\langle 1 \rangle 2$. For all $x \in \alpha$, if $\forall t < x.f(t) = t$ then $f(x) = x$
$\quad \langle 2 \rangle 1$. $f(x) \subseteq x$
$\quad \quad \langle 3 \rangle 1$. LET: $y \in f(x)$
$\quad \quad \langle 3 \rangle 2$. $y \in \beta$
$\quad \quad \langle 3 \rangle 3$. PICK $t \in \alpha$ such that $f(t) = y$
$\quad \quad \quad$ PROOF: f is surjective.
$\quad \quad \langle 3 \rangle 4$. $f(t) \in f(x)$
$\quad \quad \langle 3 \rangle 5$. $t \in x$
$\quad \quad \quad$ PROOF: Since f is an order isomorphism.
$\quad \quad \langle 3 \rangle 6$. $f(t) = t$
$\quad \quad \quad$ PROOF: Induction hypothesis.
$\quad \quad \langle 3 \rangle 7$. $y = t$
$\quad \quad \langle 3 \rangle 8$. $y \in x$
$\quad \langle 2 \rangle 2$. $x \subseteq f(x)$
$\quad \quad \langle 3 \rangle 1$. LET: $t \in x$
$\quad \quad \langle 3 \rangle 2$. $f(t) \in f(x)$
$\quad \quad \langle 3 \rangle 3$. $f(t) = t$
$\quad \quad \langle 3 \rangle 4$. $t \in f(x)$

$\langle 1 \rangle 3$. $\forall x \in \alpha . f(x) = x$
   PROOF: Transfinite induction.
$\langle 1 \rangle 4$. $\alpha = \beta$
   PROOF: Since $\beta = \{f(t) \mid t \in \alpha\} = \{t \mid t \in \alpha\} = \alpha$.
☐

Theorem 6.1.3. *Every well-ordered set is isomorphic to a unique ordinal.*

PROOF:
$\langle 1 \rangle 1$. For any well-ordered set A, there exists an ordinal α such that $A \cong \alpha$.
   $\langle 2 \rangle 1$. LET: A be a well-ordered set.
   $\langle 2 \rangle 2$. Define the function E on A by transfinite recursion thus:
   $$E(t) = \{E(x) \mid x < t\} \qquad (t \in A) \ .$$
   $\langle 2 \rangle 3$. LET: $\alpha = \{E(x) \mid x \in A\}$
   $\langle 2 \rangle 4$. α is an ordinal.
      $\langle 3 \rangle 1$. α is a transitive set.
         $\langle 4 \rangle 1$. LET: $x \in y \in \alpha$
         $\langle 4 \rangle 2$. PICK $t \in A$ such that $y = E(t)$
         $\langle 4 \rangle 3$. $x \in E(t) = \{E(s) \mid s < t\}$
         $\langle 4 \rangle 4$. PICK $s < t$ such that $x = E(s)$
         $\langle 4 \rangle 5$. $x \in \alpha$
      $\langle 3 \rangle 2$. α is well-ordered by $\in$.
         $\langle 4 \rangle 1$. LET: $<= \{(x, y) \in \alpha \mid x \in y\}$
         $\langle 4 \rangle 2$. $<$ is transitive.
            $\langle 5 \rangle 1$. LET: $x, y, z \in \alpha$ with $x \in y \in z$
            $\langle 5 \rangle 2$. PICK $t \in A$ such that $z = E(t)$
            $\langle 5 \rangle 3$. PICK $s \in A$ such that $s < t$ and $y = E(s)$
            $\langle 5 \rangle 4$. PICK $r \in A$ such that $r < s$ and $x = E(r)$
            $\langle 5 \rangle 5$. $r < t$
            $\langle 5 \rangle 6$. $x \in z$
         $\langle 4 \rangle 3$. $<$ satisfies trichotomy.
            $\langle 5 \rangle 1$. LET: $x, y \in \alpha$
            $\langle 5 \rangle 2$. PICK $s, t \in A$ such that $E(s) = x$ and $E(t) = y$
            $\langle 5 \rangle 3$. Exactly one of $s < t$, $s = t$, $t < s$ holds.
            $\langle 5 \rangle 4$. CASE: $s < t$
               $\langle 6 \rangle 1$. $x \in y$
               $\langle 6 \rangle 2$. $x \neq y$ and $y \notin x$
                  PROOF: Axiom of Regularity.
            $\langle 5 \rangle 5$. CASE: $s = t$
               $\langle 6 \rangle 1$. $x = y$
               $\langle 6 \rangle 2$. $x \notin y$ and $y \notin x$
                  PROOF: Axiom of Regularity.
            $\langle 5 \rangle 6$. CASE: $t < s$
               PROOF: Similar to $\langle 5 \rangle 4$.
         $\langle 4 \rangle 4$. $\leq$ is a linear order on α.
            PROOF: Proposition 5.2.3.
         $\langle 4 \rangle 5$. Every nonempty subset of α has a least element.

⟨5⟩1. LET: S be a nonempty subset of α
⟨5⟩2. LET: $T = \{x \in A \mid E(x) \in S\}$
⟨5⟩3. LET: t be the least element of T.
      PROVE: $E(t)$ is least in S
⟨5⟩4. LET: $y \in S$
⟨5⟩5. PICK $s \in T$ such that $E(s) = y$
⟨5⟩6. $t \leq s$
⟨5⟩7. $x \leq y$
⟨2⟩5. E is surjective.
  PROOF: By definition of α.
⟨2⟩6. E is strictly monotone.
  PROOF: If $s < t$ then $E(s) \in E(t)$ by definition of $E(t)$.
⟨2⟩7. Q.E.D.
  PROOF: Corollary 5.2.6.1.
⟨1⟩2. For any ordinals α and β, if $\alpha \cong \beta$ then $\alpha = \beta$.
  PROOF: Proposition 6.1.2.
□

Proposition 6.1.4. *The class* **On** *is a transitive class. That is, every element of an ordinal is an ordinal.*

PROOF:
⟨1⟩1. LET: α be an ordinal.
⟨1⟩2. LET: $\beta \in \alpha$
⟨1⟩3. β is a transitive set.
  ⟨2⟩1. LET: $x \in y \in \beta$
  ⟨2⟩2. $y \in \alpha$
    PROOF: α is transitive.
  ⟨2⟩3. $x \in \alpha$
    PROOF: α is transitive.
  ⟨2⟩4. $x \in \beta$
    PROOF: Since $\{(x, y) \in \alpha^2 \mid x \in y\}$ is transitive.
⟨1⟩4. β is well ordered by $\in$.
  PROOF: By Corollary 5.3.3.1.
□

Proposition 6.1.5. *Given two ordinal numbers α, β, exactly one of $\alpha \in \beta$, $\alpha = \beta$, $\beta \in \alpha$ holds.*

PROOF:
⟨1⟩1. At most one holds.
  PROOF: Since every ordinal is a transitive set and we never have $\alpha \in \alpha$.
⟨1⟩2. At least one holds.
  ⟨2⟩1. Either $\alpha \cong \beta$ or $\exists t \in \beta.\alpha \cong \operatorname{seg} t$ or $\exists t \in \alpha. \operatorname{seg} t \cong \beta$.
  ⟨2⟩2. CASE: $\alpha \cong \beta$
    PROOF: Then $\alpha = \beta$ by Proposition 6.1.2.
  ⟨2⟩3. CASE: There exists $t \in \beta$ such that $\alpha \cong \operatorname{seg} t$

⟨3⟩1. t is an ordinal number.
    PROOF: Proposition 6.1.4.
⟨3⟩2. $t = \operatorname{seg} t$
    ⟨4⟩1. $t \subseteq \operatorname{seg} t$
      ⟨5⟩1. LET: $s \in t$
      ⟨5⟩2. $s \in \beta$
        PROOF: β is a transitive set.
      ⟨5⟩3. $s \in \operatorname{seg} t$
    ⟨4⟩2. $\operatorname{seg} t \subseteq t$
      PROOF: Immediate from definitions.
⟨3⟩3. $\alpha = t$
    PROOF: Proposition 6.1.2.
⟨3⟩4. $\alpha \in \beta$
⟨2⟩4. CASE: There exists $t \in \alpha$ such that $\operatorname{seg} t \cong \beta$
  PROOF: $\beta \in \alpha$ similarly.
∎

Proposition 6.1.6. *Any nonempty set S of ordinal numbers has a least element.*

PROOF:
⟨1⟩1. PICK $\beta \in S$
⟨1⟩2. CASE: $\beta \cap S = \emptyset$
  PROOF: Then β is least in S.
⟨1⟩3. CASE: $\beta \cap S \neq \emptyset$
  PROOF: The least element of $\beta \cap S$ is least in S.
∎

Theorem 6.1.7. *The class* **On** *is well ordered by* $\in$.

PROOF:
⟨1⟩1. LET: $\mathbf{E} = \{(x, y) \in \mathbf{On}^2 \mid x \in y\}$
⟨1⟩2. $\mathbf{E}$ is transitive.
  PROOF: If $\alpha \in \beta \in \gamma$ then $\alpha \in \gamma$ because every ordinal is a transitive set.
⟨1⟩3. $\mathbf{E}$ satisfies trichotomy.
  PROOF: Proposition 6.1.5.
⟨1⟩4. $\mathbf{E}$ linearly orders **On**.
  PROOF: Proposition 5.2.3.
⟨1⟩5. For any $\alpha \in \mathbf{On}$, the class $\{\beta \in \mathbf{On} \mid \beta \mathbf{E} \alpha\}$ is a set.
  PROOF: It is equal to α.
⟨1⟩6. Every nonempty subset of **On** has an **E**-least element.
  PROOF: Proposition 6.1.6.
∎

Corollary 6.1.7.1 (Burali-Forti Paradox)**.** *The class* **On** *is a proper class.*

PROOF: If it were a set, it would be a transitive set well-ordered by $\in$, and hence a member of itself, contradicting the Axiom of Regularity.

Proposition 6.1.8. *Any transitive set of ordinal numbers is an ordinal number.*

PROOF: It is well-ordered by $\in$ by Corollary 5.3.3.1 and Theorem 6.1.7. $\square$

Proposition 6.1.9. $\emptyset$ *is an ordinal number.*

PROOF: Vacuously, it is a transitive set well-ordered by $\in$.

Definition 6.1.10. We define $0 = \emptyset$.

Proposition 6.1.11. *If A is a set of ordinal numbers then $\bigcup A$ is an ordinal number.*

PROOF:
$\langle 1 \rangle 1$. $\bigcup A$ is a transitive set.
   PROOF: Proposition 1.5.3.
$\langle 1 \rangle 2$. $\bigcup A$ is a set of ordinals.
   PROOF: Proposition 6.1.4.
$\square$

Corollary 6.1.11.1. *The poset* **On** *is complete.*

PROOF: For any nonempty set A of ordinals, $\bigcup A$ is its supremum. $\square$

Proposition 6.1.12. *Let α be an ordinal and $S \subseteq \alpha$. Then S is well-ordered by $\in$ and the ordinal of $(S, \in)$ is $\leq \alpha$.*

PROOF:
$\langle 1 \rangle 1$. S is well ordered by $\in$.
$\langle 1 \rangle 2$. LET: β be the ordinal of $(S, \in)$
$\langle 1 \rangle 3$. LET: $E : S \approx \beta$ be the unique isomorphism.
$\langle 1 \rangle 4$. $\forall \gamma \in S.E(\gamma) \leq \gamma$
   $\langle 2 \rangle 1$. LET: $\gamma \in S$
   $\langle 2 \rangle 2$. ASSUME: as transfinite induction hypothesis $\forall \delta < \gamma.E(\delta) \leq \delta$
   $\langle 2 \rangle 3$. $E(\gamma)$ is the least element of β that is greater than $E(\delta)$ for all $\delta < \gamma$
   $\langle 2 \rangle 4$. γ is greater than $E(\delta)$ for all $\delta < \gamma$
   $\langle 2 \rangle 5$. $E(\gamma) \leq \gamma$
$\langle 1 \rangle 5$. $\beta \leq \alpha$
   $\langle 2 \rangle 1$. $\forall \gamma < \beta.\gamma < \alpha$
      $\langle 3 \rangle 1$. LET: $\gamma < \beta$
      $\langle 3 \rangle 2$. PICK $\delta \in S$ such that $E(\delta) = \gamma$
      $\langle 3 \rangle 3$. $\gamma = E(\delta) \leq \delta < \alpha$
$\square$

Proposition 6.1.13. *Let α be a set. Then the following are equivalent.*

1. *α is an ordinal.*

2. *α is a transitive set and, for all $x, y \in \alpha$, either $x = y$ or $x \in y$ or $y \in x$.*

3. *α is a transitive set of transitive sets.*

PROOF:

⟨1⟩1. $1 \Rightarrow 2$

  PROOF: Immediate from definitions.

⟨1⟩2. $2 \Rightarrow 3$

  ⟨2⟩1. ASSUME: α is a transitive set and, for all $x, y \in \alpha$, either $x = y$ or $x \in y$
          or $y \in x$

  ⟨2⟩2. LET: $z \in \alpha$

        PROVE: z is transitive.

  ⟨2⟩3. LET: $x \in y \in z$

  ⟨2⟩4. $y \in \alpha$

  ⟨2⟩5. $x \in \alpha$

  ⟨2⟩6. Either $x = z$ or $x \in z$ or $z \in x$

  ⟨2⟩7. $x \neq z$

    PROOF: We cannot have $x \in y \in x$ by the Axiom of Regularity.

  ⟨2⟩8. $z \notin x$

    PROOF: We cannot have $x \in y \in z \in x$ by the Axiom of Regularity.

⟨1⟩3. $3 \Rightarrow 1$

  ⟨2⟩1. LET: x be a transitive set of transitive sets.

  ⟨2⟩2. ASSUME: as $\in$-induction hypothesis that, for all $y \in x$, if y is a transitive
                set of transitive sets then y is a transitive set of ordinals.

  ⟨2⟩3. Every element of x is an ordinal.

    ⟨3⟩1. LET: $y \in x$

    ⟨3⟩2. y is transitive.

    ⟨3⟩3. Every element of y is transitive.

      PROOF: Since every element of y is an element of x, because x is transi-
      tive.

    ⟨3⟩4. y is an ordinal.

      PROOF: ⟨2⟩2

  ⟨2⟩4. Q.E.D.

    PROOF: Proposition 6.1.8.

▯

Lemma 6.1.14. *Let A and B be well-ordered sets. If B is an end extension of
A then the ordinal of A is $\leq$ the ordinal of B.*

PROOF:

⟨1⟩1. LET: α be the ordinal of A and β the ordinal of B.

⟨1⟩2. LET: $E_A : A \cong \alpha$ and $E_B : B \cong \beta$ be the canonical isomorphisms.

⟨1⟩3. $\forall a \in A.E_A(a) = E_B(a)$

  ⟨2⟩1. LET: $a \in A$

  ⟨2⟩2. ASSUME: as transfinite induction hypothesis $\forall x < a.E_A(x) = E_B(x)$

  ⟨2⟩3. $E_A(a)$ is the least ordinal that is greater than $E_A(x)$ for all $x < a$

  ⟨2⟩4. $E_B(a)$ is the least ordinal that is greater than $E_B(x)$ for all $x < b$

  ⟨2⟩5. $\{x \in A \mid x <_A a\} = \{x \in B \mid x <_B a\}$

  ⟨2⟩6. $E_A(a) = E_B(a)$

⟨1⟩4. $\alpha \subseteq \beta$

⟨1⟩5. $\alpha \leq \beta$

▯

Lemma 6.1.15. *Let $\mathcal{C}$ be a set of well ordered sets such that, for any $A, B \in \mathcal{C}$, we have that one of A and B is an end extension of the other. Let $W = \bigcup \mathcal{C}$ under $x \leq y$ iff there exists $A \in W$ such that $x, y \in A$ and $x \leq y$. Then W is a well ordered set whose ordinal is the supremum of the ordinals of the members of $\mathcal{C}$.*

PROOF:

6.2 Successors

Definition 6.2.1 (Successor)**.** The *successor* of a set a is the set $a^+ := a \cup \{a\}$.

Proposition 6.2.2. *A set a is a transitive set if and only if*

$$\bigcup(a^+) = a \ .$$

PROOF:

$\langle 1 \rangle 1$. If a is a transitive set then $\bigcup(a^+) = a$.

  $\langle 2 \rangle 1$. ASSUME: a is a transitive set.

  $\langle 2 \rangle 2$. $\bigcup(a^+) \subseteq a$

    $\langle 3 \rangle 1$. LET: $x \in \bigcup(a^+)$

        PROVE: $x \in a$

    $\langle 3 \rangle 2$. PICK $y \in a^+$ such that $x \in y$.

    $\langle 3 \rangle 3$. $y \in a$ or $y = a$.

    $\langle 3 \rangle 4$. CASE: $y \in a$

      PROOF: Then $x \in a$ because a is a transitive set.

    $\langle 3 \rangle 5$. CASE: $y = a$

      PROOF: Then $x \in a$ immediately.

  $\langle 2 \rangle 3$. $a \subseteq \bigcup(a^+)$

    PROOF: Since $a \in a^+$.

$\langle 1 \rangle 2$. If $\bigcup(a^+) = a$ then a is a transitive set.

  $\langle 2 \rangle 1$. ASSUME: $\bigcup(a^+) = a$

  $\langle 2 \rangle 2$. $\bigcup a \subseteq a$

    PROOF:

$$\bigcup a \subseteq \bigcup(a^+) \qquad\qquad \text{(Proposition 1.4.8)}$$
$$= a \qquad\qquad\qquad\qquad (\langle 2 \rangle 1)$$

  $\langle 2 \rangle 3$. a is a transitive set.

    PROOF: Proposition 1.5.2.

⬚

Proposition 6.2.3. *For any set a, we have a is a transitive set if and only if a^+ is a transitive set.*

PROOF:

$\langle 1 \rangle 1$. If a is a transitive set then a^+ is a transitiveset.

  PROOF: If a is a transitive set then $\bigcup(a^+) = a \subseteq a^+$ by Proposition 6.2.2 and so a^+ is a transitive set.

$\langle 1 \rangle 2$. If a^+ is a transitive set then a is a transitive set.

  $\langle 2 \rangle 1$. ASSUME: a^+ is a transitive set.

  $\langle 2 \rangle 2$. LET: $x \in y \in a$

  $\langle 2 \rangle 3$. $x \in y \in a^+$

  $\langle 2 \rangle 4$. $x \in a^+$

    PROOF: $\langle 2 \rangle 1$

  $\langle 2 \rangle 5$. $x \neq a$

    PROOF: From $\langle 2 \rangle 2$ and the Axiom of Regularity.

⟨2⟩6. $x \in a$

☐

Definition 6.2.4. We write 0 for $\emptyset$, 1 for $\emptyset^+$, 2 for $\emptyset^{++}$, etc.

Proposition 6.2.5. *For any set A we have $\mathcal{P}A \approx 2^A$.*

PROOF: The function $H : \mathcal{P}A \to 2^A$ defined by $H(S)(a) = \{\emptyset\}$ if $a \in S$ and $\emptyset$ if $a \notin S$ is a bijection. ☐

Proposition 6.2.6. *For any ordinal number α we have α^+ is an ordinal number.*

PROOF:
⟨1⟩1. α^+ is a transitive set.
   PROOF: Proposition 6.2.3.
⟨1⟩2. α^+ is well-ordered by $\in$.
   ⟨2⟩1. For all $x, y, z \in \alpha^+$, if $x \in y \in z$ then $x \in z$
      ⟨3⟩1. CASE: $z = \alpha$
      PROOF: Then $x \in \alpha$ since α is a transitive set.

6.5 Ordinal Arithmetic

6.5.1 Addition

Definition 6.5.1. Let A and B be disjoint well-ordered sets. The *concatenation* of A and B is the set $A \cup B$ under the relation:

- if $a, a' \in A$ then $a \leq a'$ iff $a \leq a'$ in A

- if $b, b' \in B$ then $b \leq b'$ iff $b \leq b'$ in B

- if $a \in A$ and $b \in B$ then $a \leq b$ and $b \not\leq a$.

Proposition 6.5.2. *If A and B are disjoint well-ordered sets, then their concatenation is well-ordered.*

PROOF:
$\langle 1 \rangle$1. $\leq$ is reflexive.
  PROOF: For all $a \in A$ we have $a \leq a$, and for all $b \in B$ we have $b \leq b$.
$\langle 1 \rangle$2. $\leq$ is antisymmetric.
  $\langle 2 \rangle$1. ASSUME: $x \leq y \leq x$
  $\langle 2 \rangle$2. CASE: $x, y \in A$
    PROOF: Then $x = y$ since the order on A is antisymmetric.
  $\langle 2 \rangle$3. CASE: $x \in A$ and $y \in B$
    PROOF: This is impossible as it would imply $y \not\leq x$.
  $\langle 2 \rangle$4. CASE: $x \in B$ and $y \in A$
    PROOF: This is impossible as it would imply $x \not\leq y$.
  $\langle 2 \rangle$5. CASE: $x, y \in B$
    PROOF: Then $x = y$ since the order on B is antisymmetric.
$\langle 1 \rangle$3. $\leq$ is transitive.
  $\langle 2 \rangle$1. ASSUME: $x \leq y \leq z$
  $\langle 2 \rangle$2. CASE: $x, z \in A$
    PROOF: In this case $y \in A$ since $y \leq z$, and so $x \leq z$ since the order on A is transitive.
  $\langle 2 \rangle$3. CASE: $x \in A$ and $z \in B$
    PROOF: Then $x \leq z$ immediately.
  $\langle 2 \rangle$4. CASE: $x \in B$ and $z \in A$
    PROOF: This is impossible because we have $y \notin A$ since $x \leq y$ and $y \notin B$ since $y \leq z$.
  $\langle 2 \rangle$5. CASE: $x, z \in B$
    PROOF: In this case $y \in B$ since $x \leq y$, and so $x \leq z$ since the order on B is transitive.
$\langle 1 \rangle$4. $\leq$ is total.
  $\langle 2 \rangle$1. LET: $x, y \in A \cup B$
  $\langle 2 \rangle$2. CASE: $x, y \in A$
    PROOF: Then $x \leq y$ or $y \leq x$ because the order on A is total.
  $\langle 2 \rangle$3. CASE: $x \in A$ and $y \in B$
    PROOF: Then $x \leq y$.

⟨2⟩4. CASE: $x \in B$ and $y \in A$
    PROOF: Then $y \leq x$.
⟨2⟩5. CASE: $x, y \in B$
    PROOF: Then $x \leq y$ or $y \leq x$ because the order on B is total.
⟨1⟩5. Every nonempty subset of $A \cup B$ has a least element.
    ⟨2⟩1. LET: S be a nonempty subset of $A \cup B$
    ⟨2⟩2. CASE: $S \cap A = \emptyset$
        PROOF: Then $S \subseteq B$ and so S has a least element.
    ⟨2⟩3. CASE: $S \cap A \neq \emptyset$
        PROOF: The least element of $S \cap A$ is the least element of S.
☐

Definition 6.5.3 (Ordinal Addition)**.** Let α and β be ordinal numbers. Then $\alpha + \beta$ is the ordinal number of the concatenation of A and B, where A is any well ordered set with ordinal α and B is any well ordered set with ordinal β.

Theorem 6.5.4 (Associative Law for Addition)**.** *For any ordinals ρ, σ and τ, we have*

$$\rho + (\sigma + \tau) = (\rho + \sigma) + \tau \ .$$

PROOF: Given disjoint well ordered sets A, B and C, the concatenation of A with (the concatenation of B and C) is the same as the concatenation of (the concatenation of A and B) and C. ☐

Theorem 6.5.5. *For any ordinal ρ we have*

$$\rho + 0 = 0 + \rho = \rho \ .$$

PROOF: For any well ordered set A, the concatenation of A with $\emptyset$ is A, and the concatenation of $\emptyset$ with A is A. ☐

Theorem 6.5.6. *For any ordinal α we have $\alpha + 1 = \alpha^+$.*

PROOF: Since α^+ is the concatenation of α and $\{\alpha\}$. ☐

Theorem 6.5.7. *For any ordinal α, the operation that maps β to $\alpha + \beta$ is normal.*

PROOF:
⟨1⟩1. For any limit ordinal λ, we have $\alpha + \lambda = \sup_{\beta < \lambda}(\alpha + \beta)$.
    ⟨2⟩1. LET: λ be a limit ordinal.
    ⟨2⟩2. $(\{0\} \times \alpha) \cup (\{1\} \times \lambda) = \bigcup_{\beta \in \lambda}((\{0\} \times \alpha) \cup (\{1\} \times \beta))$, where the order on the right hand side is as in Lemma 6.1.15.
        PROOF:
        $$(\{0\} \times \alpha) \cup (\{1\} \times \lambda) = (\{0\} \times \alpha) \cup (\{1\} \times \bigcup_{\beta < \lambda} \beta)$$
        $$= (\{0\} \times \alpha) \cup \bigcup_{\beta < \lambda}(\{1\} \times \beta)$$
        $$= \bigcup_{\beta < \lambda}((\{0\} \times \alpha) \cup (\{1\} \times \beta))$$

$\langle 1 \rangle 2$. For any ordinal β we have $\alpha + \beta < \alpha + \beta^+$
  PROOF: Since $\alpha + \beta^+ = \alpha + \beta + 1 = (\alpha + \beta)^+$.
▯

Corollary 6.5.7.1. *For any ordinals α, β, γ, we have $\beta < \gamma$ if and only if $\alpha + \beta < \alpha + \gamma$.*

Corollary 6.5.7.2 (Left Cancellation for Addition). *For any ordinals α, β and γ, if $\alpha + \beta = \alpha + \gamma$ then $\beta = \gamma$.*

Theorem 6.5.8. *For any ordinals α, β, γ, if $\beta \leq \gamma$ then $\beta + \alpha \leq \gamma + \alpha$.*

PROOF: Transfinite induction on α. ▯

Theorem 6.5.9 (Subtraction Theorem). *Let α and β be ordinals with $\alpha \leq \beta$. Then there exists a unique ordinal δ such that $\alpha + \delta = \beta$.*

PROOF:
$\langle 1 \rangle 1$. For all ordinals α and β with $\alpha \leq \beta$, there exists δ such that $\alpha + \delta = \beta$
  $\langle 2 \rangle 1$. LET: α and β be ordinals with $\alpha \leq \beta$
  $\langle 2 \rangle 2$. LET: δ be the greatest ordinal such that $\alpha + \delta \leq \beta$
    PROOF: Proposition 6.4.6.
  $\langle 2 \rangle 3$. $\alpha + \delta = \beta$
    PROOF: If $\alpha + \delta < \beta$ then $\alpha + \delta + 1 \leq \beta$ contradicting the greatestness of δ.
$\langle 1 \rangle 2$. Q.E.D.
  PROOF: Uniqueness follows from the Left Cancellation Law.
▯

6.5.2 Multiplication

Definition 6.5.10 (Ordinal Multiplication). Let α and β be ordinal numbers. Then $\alpha\beta$ is the ordinal number of $A \times B$ under the lexicographic order, where A is any well ordered set with ordinal α and B is any well ordered set with ordinal β.

This is well defined by Proposition 5.3.4.

Theorem 6.5.11 (Associative Law). *For any ordinals ρ, σ and τ, we have*

$$\rho(\sigma\tau) = (\rho\sigma)\tau \ .$$

PROOF: Let A, B and C be well ordered sets with ordinals ρ, σ and τ. Then both $\rho(\sigma\tau)$ and $(\rho\sigma)\tau$ are the ordinal of $A \times B \times C$ under
$(a, b, c) \leq (a', b', c') \Leftrightarrow a \leq a' \vee (a = a' \wedge b \leq b') \vee (a = a' \wedge b = b' \wedge c \leq c') \ .$ ▯

Theorem 6.5.12 (Left Distributive Law). *For any ordinals ρ, σ and τ, we have*

$$\rho(\sigma + \tau) = \rho\sigma + \rho\tau$$

PROOF: Let A, B and C be well ordered sets with ordinals ρ, σ and τ and with $B \cap C = \emptyset$. Then both $\rho(\sigma + \tau)$ and $\rho\sigma + \rho\tau$ are the ordinal of $A \times (B \cup C)$ under the lexicographic ordering. $\square$

Theorem 6.5.13. *For any ordinal ρ we have $\rho 0 = 0\rho = 0$.*

PROOF: For any well ordered set A we have $A \times \emptyset = \emptyset \times A = \emptyset$. $\square$

Theorem 6.5.14. *For any ordinal ρ we have $\rho 1 = 1\rho = \rho$.*

PROOF: Easy. $\square$

Theorem 6.5.15. *For any ordinals ρ and σ, if $\rho\sigma = 0$ then $\rho = 0$ or $\sigma = 0$.*

PROOF: If $A \times B = \emptyset$ then $A = \emptyset$ or $B = \emptyset$. $\square$

Theorem 6.5.16. *For any non-zero ordinal α, the operation that maps β to $\alpha\beta$ is normal.*

PROOF:
$\langle 1 \rangle$1. For any limit ordinal λ, we have $\alpha\lambda = \bigcup_{\beta < \lambda} \alpha\beta$
$\quad \langle 2 \rangle$1. LET: λ be a limit ordinal
$\quad \langle 2 \rangle$2. $\alpha \times \lambda = \bigcup_{\beta < \lambda}(\alpha \times \beta)$ as well-ordered sets
$\langle 1 \rangle$2. For any ordinal β we have $\alpha\beta < \alpha\beta^+$
$\quad$PROOF: $\alpha\beta^+ = \alpha\beta + \alpha > \alpha\beta$
$\square$

Corollary 6.5.16.1. *For any ordinals α, β, γ, if $\alpha \neq 0$ then $\beta < \gamma$ if and only if $\alpha\beta < \alpha\gamma$.*

Corollary 6.5.16.2 (Left Cancellation for Multiplication)**.** *For any ordinals α, β, γ, if $\alpha \neq 0$ and $\alpha\beta = \alpha\gamma$ then $\beta = \gamma$.*

Theorem 6.5.17. *For any ordinals α, β and γ, if $\beta \leq \gamma$ then $\beta\alpha \leq \gamma\alpha$.*

PROOF: Transfinite induction on α. $\square$

Theorem 6.5.18 (Division Theorem)**.** *Let α and δ be ordinal numbers with $\delta \neq 0$. Then there exist unique ordinals β and γ with $\gamma < \delta$ and*

$$\alpha = \delta\beta + \gamma \ .$$

PROOF:
$\langle 1 \rangle$1. For any ordinal numbers α and δ with $\delta \neq 0$, there exist ordinals β and γ
$\quad$such that $\gamma < \delta$ and $\alpha = \delta\beta + \gamma$
$\quad \langle 2 \rangle$1. LET: α and δ be ordinals with $\delta \neq 0$
$\quad \langle 2 \rangle$2. LET: β be the greatest ordinal such that $\delta\beta \leq \alpha$
$\quad\quad$PROOF: Proposition 6.4.6.
$\quad \langle 2 \rangle$3. There exists an ordinal γ such that $\alpha = \delta\beta + \gamma$
$\quad\quad$PROOF: Subtraction Theorem

⟨1⟩2. For any ordinals δ, β, β', γ, γ', if $\delta\beta+\gamma = \delta\beta'+\gamma'$ and $\delta \neq 0$ and $\gamma, \gamma' < \delta$
  then $\beta = \beta'$ and $\gamma = \gamma'$

  ⟨2⟩1. LET: δ, β, β', γ, γ' be ordinals.
  ⟨2⟩2. ASSUME: $\delta \neq 0$ and $\delta\beta + \gamma = \delta\beta' + \gamma'$
  ⟨2⟩3. $\beta = \beta'$
    ⟨3⟩1. $\beta \nless \beta'$
      PROOF: If $\beta < \beta'$ then
$$\begin{aligned}
\delta\beta' + \gamma' &\geq \delta\beta' \\
&\geq \delta(\beta + 1) \\
&= \delta\beta + \delta \\
&> \delta\beta + \gamma
\end{aligned}$$
    ⟨3⟩2. $\beta' \nless \beta$
      PROOF: Similar.
  ⟨2⟩4. $\gamma = \gamma'$
    PROOF: By Cancellation.
□

6.5.3   Exponentiation

Definition 6.5.19. Given ordinals α and β, define the ordinal α^β as follows:

$$\begin{aligned}
0^\alpha &:= 0 & (\alpha > 0) \\
\alpha^0 &:= 1 \\
\alpha^{\beta^+} &:= \alpha^\beta \alpha & (\alpha > 0) \\
\alpha^\lambda &:= \sup_{\beta < \lambda} \alpha^\beta & (\alpha > 0, \lambda \text{ a limit ordinal})
\end{aligned}$$

Theorem 6.5.20. *Let α be an ordinal ≥ 2. The operation that maps β to α^β is normal.*

PROOF:
⟨1⟩1. For λ a limit ordinal we have $\alpha^\lambda = \sup_{\beta < \lambda} \alpha^\beta$
  PROOF: By definition.
⟨1⟩2. For any ordinal β we have $\alpha^\beta < \alpha^{\beta^+}$

Chapter 7

Cardinal Numbers

7.1   Cardinal Numbers

Definition 7.1.1 (Cardinality). For any set A, the *cardinality* or *cardinal number* $|A|$ of A is the least ordinal equinumerous with A.

Let **Card** be the class of all cardinal numbers.

Proposition 7.1.2. *For any sets A and B, we have $A \approx B$ iff $|A| = |B|$.*

PROOF: Easy. $\square$

Definition 7.1.3 (Addition). Given cardinal numbers κ and λ, we define $\kappa + \lambda$ to be $|A \cup B|$ where A and B are disjoint sets of cardinality κ and λ respectively.

We prove this is well-defined.

PROOF:
$\langle 1 \rangle 1$. ASSUME: $A \approx A'$, $B \approx B'$, and $A \cap B = A' \cap B' = \emptyset$
$\langle 1 \rangle 2$. PICK bijections $f : A \approx A'$ and $g : B \approx B'$
$\langle 1 \rangle 3$. The function $A \cup B \to A' \cup B'$ that maps $a \in A$ to $f(a)$ and $b \in B$ to $g(b)$
   is a bijection.
$\square$

Proposition 7.1.4. *For any cardinal number κ, we have $\kappa + 0 = \kappa$.*

PROOF: Let A and B be disjoint sets of cardinality κ and 0. Then $B = \emptyset$ so $A \cup B = A$ and so $|A \cup B| = \kappa$. $\square$

Theorem 7.1.5 (Associative Law for Addition). *For any cardinal numbers κ, λ, μ we have $\kappa + (\lambda + \mu) = (\kappa + \lambda) + \mu$.*

PROOF: Since $A \cup (B \cup C) = (A \cup B) \cup C$. $\square$

Proposition 7.1.6. *For any cardinal numbers κ and λ we have $\kappa + \lambda = \lambda + \kappa$.*

PROOF: Since $A \cup B = B \cup A$. $\square$

Definition 7.1.7 (Multiplication)**.** For κ and λ cardinal numbers, we define $\kappa\lambda$ to be the cardinal number of $A \times B$, where $|A| = \kappa$ and $|B| = \lambda$.

    We prove this is well-defined.

PROOF: If $f : A \approx A'$ and $g : B \approx B'$ then the function that maps (a, b) to $(f(a), g(b))$ is a bijection $A \times B \approx A' \times B'$. $\square$

Proposition 7.1.8. *For any cardinal number κ we have $\kappa \cdot 0 = 0$.*

PROOF: Since $A \times \emptyset = \emptyset$. $\square$

Proposition 7.1.9. *For any cardinal number κ we have $\kappa \cdot 1 = \kappa$.*

PROOF: The function that maps (a, e) to a is a bijection $A \times \{e\} \approx A$. $\square$

Theorem 7.1.10 (Distributive Law)**.** *For any cardinal numbers κ, λ and μ, we have $\kappa(\lambda + \mu) = \kappa\lambda + \kappa\mu$.*

PROOF: Since $A \times (B \cup C) = (A \times B) \cup (A \times C)$. $\square$

Theorem 7.1.11 (Associative Law for Multiplication)**.** *For any cardinal numbers κ, λ and μ, we have $\kappa(\lambda\mu) = (\kappa\lambda)\mu$.*

PROOF: Since $A \times (B \times C) \approx (A \times B) \times C$. $\square$

Theorem 7.1.12 (Commutative Law for Multiplication)**.** *For any cardinal numbers κ and λ, we have $\kappa\lambda = \lambda\kappa$.*

PROOF: Since $A \times B \approx B \times A$. $\square$

Theorem 7.1.13. *For any cardinal numbers κ and λ, if $\kappa\lambda = 0$ then $\kappa = 0$ or $\lambda = 0$.*

PROOF: if $A \times B = \emptyset$ then $A = \emptyset$ or $B = \emptyset$. $\square$

Definition 7.1.14 (Exponentiation)**.** Given cardinal numbers κ and λ, we define κ^λ to be $|A^B|$, where $|A| = \kappa$ and $|B| = \lambda$.

    We prove this is well-defined.

PROOF:If $f : A \approx A'$ and $g : B \approx B'$, then the function that maps $h : B \to A$ to $f \circ h \circ g^{-1}$ is a bijection $A^B \approx A'^{B'}$. $\square$

Proposition 7.1.15. *For any cardinal numbers κ, λ and μ,*

$$\kappa^{\lambda + \mu} = (\kappa^\lambda)^\mu$$

PROOF: The function that maps $f : A \times B \to C$ to $\lambda a \in A.\lambda b \in B.f(a, b)$ is a bijection $A^{B \times C} \approx (A^B)^C$. $\square$

Proposition 7.1.16. *For any cardinal numbers κ, λ and μ,*

$$(\kappa\lambda)^\mu = \kappa^\mu\lambda^\mu \ .$$

PROOF: The function $f : A^C \times B^C \to (A \times B)^C$ with $f(g,h)(c) = (g(c), h(c))$ is a bijection. $\square$

Proposition 7.1.17. *For any cardinal numbers κ, λ and μ, we have*

$$\kappa^{\lambda + \mu} = \kappa^\lambda \kappa^\mu \ .$$

PROOF: If $B \cap C = \emptyset$, then $f : A^B \times A^C \to A^{B \cup C}$ given by $f(g,h)(b) = g(b)$ and $f(g,h)(c) = h(c)$ is a bijection. $\square$

Proposition 7.1.18. *For any cardinal number κ, we have $\kappa^0 = 1$.*

PROOF: For any set A, we have $A^\emptyset = \{\emptyset\}$. $\square$

Proposition 7.1.19. *For any cardinal number κ, we have $\kappa^1 = \kappa$.*

PROOF: For any sets A and B, if $B = \{b\}$ then the function $f : A \to A^B$ with $f(a)(b) = a$ is a bijection. $\square$

Proposition 7.1.20. *For any non-zero cardinal number κ we have $0^\kappa = 0$.*

PROOF: If A is nonempty then there is no function $A \to \emptyset$. $\square$

Proposition 7.1.21. *For any set A we have $|\mathcal{P}A| = 2^{|A|}$.*

PROOF: The function $f : \mathcal{P}A \to 2^A$ where $f(X)(a) = 0$ if $a \notin X$ and $f(X)(a) = 1$ if $a \in X$. $\square$

Corollary 7.1.21.1. *For any cardinal number κ we have $\kappa < 2^\kappa$.*

PROOF: By Cantor's Theorem. $\square$

7.2 Ordering on Cardinal Numbers

Definition 7.2.1. Given cardinal numbers κ and λ, we have $\kappa \leq \lambda$ iff $A \preccurlyeq B$, where $|A| = \kappa$ and $|B| = \lambda$.

PROOF:
$\langle 1 \rangle 1$. LET: $|A| = \kappa$ and $|B| = \lambda$
$\langle 1 \rangle 2$. PICK bijections $f : A \approx \kappa$ and $g : B \approx \lambda$
$\langle 1 \rangle 3$. If $\kappa \leq \lambda$ then $A \preccurlyeq B$
 PROOF: Let $i : \kappa \hookrightarrow \lambda$ be the inclusion. Then $g^{-1} \circ i \circ f$ is an injection $A \to B$.
$\langle 1 \rangle 4$. If $A \preccurlyeq B$ then $\kappa \leq \lambda$
 $\langle 2 \rangle 1$. ASSUME: $A \preccurlyeq B$
 $\langle 2 \rangle 2$. PICK an injection $h : A \rightarrowtail B$
 $\langle 2 \rangle 3$. $g(h(A)) \subseteq B$ is well-ordered by $\in$
 $\langle 2 \rangle 4$. LET: γ be the ordinal number of $(g(h(A)), \in)$
 $\langle 2 \rangle 5$. $\gamma \leq \lambda$
  PROOF: Proposition 6.1.12.
 $\langle 2 \rangle 6$. $\kappa \leq \gamma$

PROOF: By the leastness of κ, since A is equinumerous with γ.
    $\langle 2 \rangle 7.$ $\kappa \le \lambda$

$\square$

Corollary 7.2.1.1. *There is no largest cardinal number.*

Proposition 7.2.2. *For any cardinal numbers κ, λ, μ, if $\kappa \le \lambda$ then $\kappa + \mu \le \lambda + \mu$.*

PROOF: If $f : A \to B$ is injective, and $A \cap C = B \cap C = \emptyset$, then the function $A \cup C \to B \cup C$ that maps a to $f(a)$ and maps c to c is an injection. $\square$

Proposition 7.2.3. *For any cardinal numbers κ, λ, μ, if $\kappa \le \lambda$ then $\kappa\mu \le \lambda\mu$.*

PROOF: If $f : A \to B$ is injective, then the function $A \times C \to B \times C$ that maps (a, c) to $(f(a), c)$ is injective. $\square$

Proposition 7.2.4. *For any cardinal numbers κ, λ, μ, if $\kappa \le \lambda$ then $\kappa^\mu \le \lambda^\mu$.*

PROOF: Given an injection $f : A \to B$, the function that maps $A^C \to B^C$ that maps g to $f \circ g$ is an injection. $\square$

Proposition 7.2.5. *For any cardinal numbers κ, λ, μ, if $\kappa \le \lambda$ and μ and κ are not both 0, then $\mu^\kappa \le \mu^\lambda$.*

PROOF:
$\langle 1 \rangle 1.$ LET: A, B and C be sets with A and C not both empty.
$\langle 1 \rangle 2.$ LET: $f : A \to B$ be an injection.
        PROVE: $C^A \preccurlyeq C^B$
$\langle 1 \rangle 3.$ CASE: $C = \emptyset$
    PROOF: Then $A \ne \emptyset$ so $C^A = \emptyset \preccurlyeq C^B$.
$\langle 1 \rangle 4.$ CASE: $C \ne \emptyset$
    $\langle 2 \rangle 1.$ PICK $c \in C$
    $\langle 2 \rangle 2.$ LET: $g : C^A \to C^B$ be the function $g(h)(f(a)) = h(a)$, $g(h)(b) = c$ if
            $b \notin f(A)$
    $\langle 2 \rangle 3.$ g is an injection.

$\square$

Proposition 7.2.6. *Let $\mathcal{A}$ be a set such that $\forall X \in \mathcal{A}.|X| \le \kappa$. Then*

$$\left| \bigcup \mathcal{A} \right| \le |\mathcal{A}|\kappa \ .$$

PROOF:
$\langle 1 \rangle 1.$ For $X \in \mathcal{A}$, choose a surjection $f_X : \kappa \to X$.
$\langle 1 \rangle 2.$ Define $g : \mathcal{A} \times \kappa \to \bigcup \mathcal{A}$ by $g(X, \alpha) = f_X(\alpha)$
$\langle 1 \rangle 3.$ g is surjective.

$\square$

Lemma 7.2.7. *The union of a set of cardinal numbers is a cardinal number.*

PROOF:

⟨1⟩1. LET: A be a set of cardinal numbers.
     PROVE: $\bigcup A$ is the smallest ordinal equinumerous with $\bigcup A$
⟨1⟩2. LET: $\alpha < \bigcup A$
     PROVE: $\alpha \not\approx \bigcup A$
⟨1⟩3. PICK $\kappa \in A$ such that $\alpha < \kappa$
⟨1⟩4. $\alpha \prec \kappa$
⟨1⟩5. $\alpha \prec \bigcup A$
▯

Chapter 8

Natural Numbers

8.1 Inductive Sets

Definition 8.1.1 (Inductive)**.** A set I is *inductive* iff $0 \in I$ and $\forall x \in I.x^+ \in I$.

Definition 8.1.2 (Natural Number)**.** A *natural number* is a set that belongs to every inductive set.

Theorem 8.1.3. *The class $\mathbb{N}$ of natural numbers is a set.*

PROOF:
⟨1⟩1. PICK an inductive set I.
   PROOF: Axiom of Infinity.
⟨1⟩2. $\mathbb{N} \subseteq I$
☐

Theorem 8.1.4. $\mathbb{N}$ *is inductive, and is a subset of every other inductive set.*

PROOF:
⟨1⟩1. $\mathbb{N}$ is inductive.
  ⟨2⟩1. $0 \in \mathbb{N}$
    PROOF: Since 0 is a member of every inductive set.
  ⟨2⟩2. $\forall n \in \mathbb{N}.n^+ \in \mathbb{N}$
    ⟨3⟩1. LET: $n \in \mathbb{N}$
    ⟨3⟩2. LET: I be any inductive set.
       PROVE: $n^+ \in I$
    ⟨3⟩3. $n \in I$
      PROOF: ⟨3⟩1, ⟨3⟩2
    ⟨3⟩4. $n^+ \in I$
      PROOF: ⟨3⟩2, ⟨3⟩3
⟨1⟩2. $\mathbb{N}$ is a subset of every inductive set.
  PROOF: Immediate from definitions.
☐

Corollary 8.1.4.1 (Induction Principle for $\mathbb{N}$). *Any inductive subset of $\mathbb{N}$ coincides with $\mathbb{N}$.*

Theorem 8.1.5. *Every natural number except 0 is the successor of some natural number.*

PROOF: Trivially by induction. ☐

Proposition 8.1.6. *Every natural number is an ordinal.*

PROOF: By induction. ☐

Proposition 8.1.7. $\mathbb{N}$ *is a transitive set.*

PROOF:
⟨1⟩1. $0 \subseteq \mathbb{N}$
⟨1⟩2. $\forall n \in \mathbb{N}. n \subseteq \mathbb{N} \Rightarrow n^+ \subseteq \mathbb{N}$
⟨1⟩3. $\forall n \in \mathbb{N}. n \subseteq \mathbb{N}$
    PROOF: From ⟨1⟩1 and ⟨1⟩2 by induction.
☐

Corollary 8.1.7.1. $\mathbb{N}$ *is an ordinal.*

Definition 8.1.8. We define $\omega = \mathbb{N}$.

Proposition 8.1.9 (Dependent Choice). *Let A be a nonempty set and R a relation on A such that $\forall x \in A. \exists y \in A. (y, x) \in R$. Then there exists a function $f : \mathbb{N} \to A$ such that $\forall n \in \mathbb{N}. (f(n+1), f(n)) \in R$.*

PROOF:
⟨1⟩1. PICK a choice function F for A.
⟨1⟩2. PICK $a \in A$
⟨1⟩3. Define $f : \mathbb{N} \to A$ by $f(0) = a$ and $f(n+1) = F(\{y \in A \mid (y, f(n)) \in R\})$.
☐

Theorem 8.1.10. *Let $<$ be a linear ordering on A. Then $<$ is a well ordering on A if and only if there does not exist a function $f : \mathbb{N} \to A$ such that $\forall n \in \mathbb{N}. f(n+1) < f(n)$.*

PROOF:
⟨1⟩1. If there exists a function $f : \mathbb{N} \to A$ such that $\forall n \in \mathbb{N}. f(n+1) < f(n)$ then $<$ is not a well ordering on A.
    PROOF: ran f is a nonempty subset of A with no least element.
⟨1⟩2. If $<$ is not a well ordering on A then there exists a function $f : \mathbb{N} \to A$ such that $\forall n \in \mathbb{N}. f(n+1) < f(n)$.
    ⟨2⟩1. ASSUME: $<$ is not a well ordering on A.
    ⟨2⟩2. PICK a nonempty subset $B \subseteq A$ that has no least element.
    ⟨2⟩3. $\forall x \in B. \exists y \in B. y < x$
    ⟨2⟩4. Choose a function $g : B \to B$ such that $\forall x \in B. g(x) < x$
    ⟨2⟩5. PICK $b \in B$

$\langle 2 \rangle 6$. Define $f : \mathbb{N} \to A$ recursively by $f(0) = b$ and $\forall n \in \mathbb{N}.f(n+1) = g(f(n))$
$\langle 2 \rangle 7$. $\forall n \in \mathbb{N}.f(n+1) < f(n)$

$\square$

Proposition 8.1.11. *There is no function $f : \mathbb{N} \to \mathbf{V}$ such that $\forall n.f(n^+) \in f(n)$.*

PROOF:
$\langle 1 \rangle 1$. LET: $f : \mathbb{N} \to \mathbf{V}$
$\langle 1 \rangle 2$. PICK $m \in f(\mathbb{N})$ such that $m \cap f(\mathbb{N}) = \emptyset$
 PROOF: Axiom of Regularity.
$\langle 1 \rangle 3$. PICK $n \in \mathbb{N}$ such that $m = f(n)$.
$\langle 1 \rangle 4$. $f(n) \cap f(\mathbb{N}) = \emptyset$
$\langle 1 \rangle 5$. $f(n^+) \notin f(n)$

$\square$

8.2 Cardinality

Definition 8.2.1 (Finite). A set is *finite* iff it is equinumerous to some natural number; otherwise it is *infinite*.

Theorem 8.2.2 (Pigeonhole Principle). *No natural number is equinumerous to a proper subset of itself.*

PROOF:
$\langle 1 \rangle 1$. LET: $P(n)$ be the property: any one-to-one function $n \to n$ is surjective.
$\langle 1 \rangle 2$. $P(0)$
 PROOF: The only function $0 \to 0$ is injective.
$\langle 1 \rangle 3$. For every natural number n, if $P(n)$ then $P(n+1)$.
 $\langle 2 \rangle 1$. ASSUME: $P(n)$
 $\langle 2 \rangle 2$. LET: f be a one-to-one function $n + 1 \to n + 1$
 $\langle 2 \rangle 3$. $f \upharpoonright n$ is a one-to-one function $n \to n + 1$
 $\langle 2 \rangle 4$. CASE: $n \notin ranf$
  $\langle 3 \rangle 1$. $f \upharpoonright n : n \to n$
  $\langle 3 \rangle 2$. $\mathrm{ran}(f \upharpoonright n) = n$
  $\langle 3 \rangle 3$. $f(n) = n$
   PROOF: $\langle 2 \rangle 1$.
  $\langle 3 \rangle 4$. $\mathrm{ran}\, f = n + 1$
 $\langle 2 \rangle 5$. CASE: $n \in \mathrm{ran}\, f$
  $\langle 3 \rangle 1$. PICK $p \in n$ such that $f(p) = n$
  $\langle 3 \rangle 2$. LET: $\hat{f} : n \to n$ be the function
$$\hat{f}(p) = f(n)$$
$$\hat{f}(x) = f(x) \qquad\qquad (x \neq p)$$
  $\langle 3 \rangle 3$. $\hat{f}$ is one-to-one
  $\langle 3 \rangle 4$. $\mathrm{ran}\, \hat{f} = n$
   PROOF: $\langle 2 \rangle 1$

⟨3⟩5. ran $f = n + 1$
⟨1⟩4. For every natural number n, $P(n)$.
□

Corollary 8.2.2.1. *No finite set is equinumerous to a proper subset of itself.*

Corollary 8.2.2.2. *Every natural number is a cardinal number.*

PROOF: For any natural number n, we have that n is the least ordinal such that $n \approx n$. □

Corollary 8.2.2.3. $\mathbb{N}$ *is a cardinal number.*

Corollary 8.2.2.4. $\mathbb{N}$ *is infinite.*

PROOF: The function that maps n to $n+1$ is a bijection between $\mathbb{N}$ and $\mathbb{N} - \{0\}$.
□

Corollary 8.2.2.5. *If C is a proper subset of a natural number n, then there exists $m < n$ such that $C \approx m$.*

PROOF: By Proposition 6.1.12. □

Corollary 8.2.2.6. *Any subset of a finite set is finite.*

Proposition 8.2.3. *For any natural numbers m and n we have $m+n$ (cardinal addition) is a natural number.*

PROOF: Induction on n. □

Corollary 8.2.3.1. *The union of two finite sets is finite.*

Corollary 8.2.3.2. *The union of a finite set of finite sets is finite.*

PROOF: By induction on the number of elements. □

Proposition 8.2.4. *For natural numbers m and n, the cardinal sum $m + n$ is equal to the ordinal sum $m + n$.*

PROOF: Induction on n. □

Proposition 8.2.5. *For any natural numbers m and n, we have mn (cardinal multiplication) is a natural number.*

Corollary 8.2.5.1. *If A and B are finite sets then $A \times B$ is finite.*

Proposition 8.2.6. *For natural numbers m and n, the cardinal product mn is equal to the ordinal product mn.*

PROOF: Induction on n. □

Proposition 8.2.7. *For any natural numbers m and n we have m^n (cardinal exponentiation) is a natural number.*

PROOF: Induction on n.

Corollary 8.2.7.1. *If A and B are finite sets then A^B are finite.*

Proposition 8.2.8. *For natural numbers m and n, the cardinal exponentiation m^n and the ordinal exponentiation m^n agree.*

PROOF: Induction on n. □

Proposition 8.2.9. $\mathbb{N}^2 \approx \mathbb{N}$

PROOF: The function $J : \mathbb{N}^2 \to \mathbb{N}$ defined by $J(m,n) = ((m+n)^2 + 3m + n)/2$ is a bijection. □

Proposition 8.2.10. *For any infinite cardinal κ we have $\aleph_0 \leq \kappa$.*

PROOF:
$\langle 1 \rangle 1$. LET: A be an infinite set.
        PROVE: $\mathbb{N} \preccurlyeq A$
$\langle 1 \rangle 2$. PICK a choice function F for A.
$\langle 1 \rangle 3$. Define $h : \mathbb{N} \to \{X \in \mathcal{P}A \mid X \text{ is finite}\}$ by
$$h(0) = \emptyset$$
$$h(n+1) = h(n) \cup \{F(A - \{h(m) \mid m < n\})\}$$
$\langle 1 \rangle 4$. Define $g : \mathbb{N} \to A$ by $g(n) = F(A - \{h(m) \mid m < n\})$
$\langle 1 \rangle 5$. g is injective.
    PROOF: If $m < n$ then $g(m) \neq g(n)$.
□

8.3   Countable Sets

Definition 8.3.1 (Countable)**.** A set A is *countable* iff $|A| \leq \aleph_0$.

Theorem 8.3.2. *The union of a countable set of countable sets is countable.*

PROOF: Proposition 7.2.6. □

8.4   Arithmetic

Definition 8.4.1 (Even)**.** A natural number n is *even* iff there exists $m \in \mathbb{N}$ such that $n = 2m$.

Definition 8.4.2 (Odd)**.** A natural number n is *odd* iff there exists $p \in \mathbb{N}$ such that $n = 2p + 1$.

Proposition 8.4.3. *Every natural number is either even or odd.*

PROOF:
$\langle 1 \rangle 1$. 0 is even.
    PROOF: $0 = 2 \times 0$.

⟨1⟩2. For any natural number n, if n is either even or odd then n^+ is either even or odd.

   PROOF:

   ⟨2⟩1. LET: $n \in \mathbb{N}$

   ⟨2⟩2. If n is even then n^+ is odd.

     PROOF: If $n = 2p$ then $n^+ = 2p + 1$.

   ⟨2⟩3. If n is odd then n^+ is even.

     PROOF: If $n = 2p + 1$ then $n^+ = 2(p + 1)$.

☐

Proposition 8.4.4. *No natural number is both even and odd.*

PROOF:

⟨1⟩1. 0 is not odd.

   PROOF: For any p we have $2p + 1 = (2p)^+ \neq 0$.

⟨1⟩2. For any natural number n, if n is not both even and odd, then n^+ is not both even and odd.

   ⟨2⟩1. LET: n be a natural number.

   ⟨2⟩2. If n^+ is even then n is odd.

     ⟨3⟩1. ASSUME: n^+ is even.

     ⟨3⟩2. PICK p such that $n^+ = 2p$

     ⟨3⟩3. $p \neq 0$

       PROOF: Since $n^+ \neq 0$.

     ⟨3⟩4. PICK q such that $p = q^+$

       PROOF: Theorem 8.1.5.

     ⟨3⟩5. $n^+ = 2q + 2$

       PROOF: ⟨3⟩2, ⟨3⟩4.

     ⟨3⟩6. $n = 2q + 1$

       PROOF: Proposition 6.2.7, ⟨3⟩5

     ⟨3⟩7. n is odd.

   ⟨2⟩3. If n^+ is odd then n is even.

     ⟨3⟩1. ASSUME: n^+ is odd.

     ⟨3⟩2. PICK p such that $n^+ = 2p + 1$

     ⟨3⟩3. $n = 2p$

       PROOF: Proposition 6.2.7, ⟨3⟩2

     ⟨3⟩4. n is even.

☐

Proposition 8.4.5. *Let m, n, p, q be natural numbres. Assume $m + n = p + q$. Then $m < p$ if and only if $q < n$.*

PROOF:

⟨1⟩1. If $m < p$ then $q < n$.

   PROOF: If $m < p$ and $n \leq q$ then $m + n < p + q$.

⟨1⟩2. If $q < n$ then $m < p$.

   PROOF: Similar.

☐

Proposition 8.4.6. *Let m, n, p and q be natural numbers. Assume $n < m$ and $q < p$. Then*

$$mq + np < mp + nq \ .$$

PROOF:

⟨1⟩1. PICK positive natural numbers a and b such that $m = n + a$ and $p = q + b$.

⟨1⟩2. $mp + nq > mq + np$

  PROOF:

$$mp + nq = (n + a)(q + b) + nq$$
$$= 2nq + nb + aq + ab$$
$$mq + np = (n + a)q + n(q + b)$$
$$= 2nq + aq + nb$$
$$\therefore mp + nq = mq + np + ab$$
$$> mq + np$$

☐

8.5 Sequences

Definition 8.5.1 (Sequence). Let A be a set. A *finite sequence* in A is a function $a : n \to A$ for some natural number n; we write it as $(a(0), a(1), \ldots, a(n-1))$. An *(infinite) sequence* in A is a function $\mathbb{N} \to A$.

We write A^* for the set of all finite sequences in A.

Proposition 8.5.2. *If A is countable then A^* is countable.*

PROOF: For any n, the set A^n is countable, and A^* is equinumerous with $\bigcup_n A^n$.
☐

8.6 Transitive Closure

Proposition 8.6.1. *For any set A, there exists a unique transitive set C such that:*

- *$A \subseteq C$*

- *For any transitive set X, if $A \subseteq X$ then $C \subseteq X$*

PROOF:

⟨1⟩1. Define a function $F : \mathbb{N} \to \mathbf{V}$ by
$$F(0) = A$$

$$F(n + 1) = A \cup \bigcup (F(0) \cup \cdots \cup F(n))$$

⟨1⟩2. For all $n \in \mathbb{N}$ and $a \in F(n)$ we have $a \subseteq F(n + 1)$

  PROOF: $a \in F(0) \cup \cdots \cup F(n)$ so $a \subseteq \bigcup (F(0) \cup \cdots \cup F(n)) \subseteq F(n + 1)$.

⟨1⟩3. LET: $C = \bigcup_{n \in \mathbb{N}} F(n)$

⟨1⟩4. C is transitive.

$\langle 2 \rangle$1. LET: $x \in y \in C$

$\langle 2 \rangle$2. PICK $n \in \mathbb{N}$ such that $y \in F(n)$

$\langle 2 \rangle$3. $y \subseteq F(n+1)$

   PROOF: $\langle 1 \rangle$2

$\langle 2 \rangle$4. $x \in F(n+1)$

$\langle 2 \rangle$5. $x \in C$

$\langle 1 \rangle$5. $A \subseteq C$

  PROOF: Since $F(0) = A$.

$\langle 1 \rangle$6. For any transitive set X, if $A \subseteq X$ then $C \subseteq X$

  $\langle 2 \rangle$1. LET: X be a transitive set

  $\langle 2 \rangle$2. ASSUME: $A \subseteq X$

  $\langle 2 \rangle$3. For all $n \in \mathbb{N}$ we have $F(n) \subseteq X$.

    $\langle 3 \rangle$1. $F(0) \subseteq X$

     PROOF: $\langle 2 \rangle$2

    $\langle 3 \rangle$2. For all $n \in \mathbb{N}$, if $F(n) \subseteq X$, then $F(n+1) \subseteq X$.

      $\langle 4 \rangle$1. LET: $n \in \mathbb{N}$

      $\langle 4 \rangle$2. ASSUME: $\forall m < n.F(m) \subseteq X$

      $\langle 4 \rangle$3. $F(0) \cup \cdots \cup F(n) \subseteq X$

      $\langle 4 \rangle$4. $\bigcup (F(0) \cup \cdots \cup F(n)) \subseteq X$

       PROOF: Since X is transitive.

      $\langle 4 \rangle$5. $F(n+1) \subseteq X$

  $\langle 2 \rangle$4. $C \subseteq X$

$\langle 1 \rangle$7. Let D be a transitive set such that $A \subseteq D$ and, for any transitive set X, if $A \subseteq X$ then $D \subseteq X$. Then $D = C$.

  PROOF: We have $C \subseteq D$ and $D \subseteq C$.

□

8.7   The Veblen Fixed Point Theorem

Theorem Schema 8.7.1 (Veblen Fixed Point Theorem). *For any class* **T**, *the following is a theorem:*

Assume **T** *is a normal ordinal operation. For every ordinal β, there exists $\gamma \geq \beta$ such that* $\mathbf{T}(\gamma) = \gamma$.

PROOF:

$\langle 1 \rangle$1. LET: β be an ordinal.

$\langle 1 \rangle$2. ASSUME: w.l.o.g. $\beta < \mathbf{T}(\beta)$

  PROOF: We have $\beta \leq \mathbf{T}(\beta)$ by Proposition 6.4.5, and if $\beta = \mathbf{T}(\beta)$ we take $\gamma := \beta$.

$\langle 1 \rangle$3. Define $f : \mathbb{N} \to \mathbf{On}$ by recursion thus:

$$f(0) = \beta$$

$$f(n^+) = \mathbf{T}(f(n))$$

$\langle 1 \rangle$4. LET: $\gamma = \sup_{n \in \mathbb{N}} f(n)$

$\langle 1 \rangle$5. $\beta \leq \gamma$

  PROOF: Since $\beta = f(0)$.

⟨1⟩6. $\mathbf{T}(\gamma) = \gamma$

  ⟨2⟩1. $\mathbf{T}(\gamma) \le \gamma$

    PROOF:

$$\begin{aligned}
\mathbf{T}(\gamma) &= \sup_{n\in\mathbb{N}} \mathbf{T}(f(n)) && \text{(Theorem 6.4.7)} \\
&= \sup_{n\in\mathbb{N}} f(n^+) && (\langle 1\rangle 3) \\
&\le \sup_{n\in\mathbb{N}} f(n) \\
&= \gamma
\end{aligned}$$

  ⟨2⟩2. $\gamma \le \mathbf{T}(\gamma)$

    PROOF:Proposition 6.4.5.

◻

Definition 8.7.2 (Derived Operation)**.** Let $\mathbf{T}$ be a normal ordinal operation. The *derived* operation $\mathbf{T}' : \mathbf{On} \to \mathbf{V}$ is the unique order isomorphism between $\mathbf{On}$ and the fixed points of $\mathbf{T}$.

Proposition Schema 8.7.3. *For any class* $\mathbf{T}$*, the following is a theorem:*

   If $\mathbf{T}$ *is a normal ordinal operation, then the derived operation is normal.*

PROOF:

⟨1⟩1. For any set S of fixed points of $\mathbf{T}$, we have $\bigcup S$ is a fixed point of $\mathbf{T}$

  ⟨2⟩1. LET: S be a set of fixed points of $\mathbf{T}$.

  ⟨2⟩2. $\mathbf{T}(\sup S) = \sup S$

    PROOF:

$$\begin{aligned}
\mathbf{T}(\sup S) &= \sup_{\alpha\in S} \mathbf{T}(\alpha) && \text{(Theorem 6.4.7)} \\
&= \sup_{\alpha\in S} \alpha && (\langle 2\rangle 1) \\
&= \sup S
\end{aligned}$$

⟨1⟩2. Q.E.D.

  PROOF: Proposition 6.4.8.

◻

8.8 Cantor Normal Form

Theorem 8.8.1. *For any ordinal* α*, there exist a unique sequence of nonzero natural numbers* $(n_1, \dots, n_k)$ *and sequence of ordinals* $(\gamma_1, \dots, \gamma_k)$ *such that*

$$\gamma_k < \gamma_{k-1} < \cdots < \gamma_1$$

and

$$\alpha = \omega^{\gamma_1} n_1 + \omega^{\gamma_2} n_2 + \cdots + \omega^{\gamma_k} n_k \ \ .$$

PROOF:

⟨1⟩1. For any ordinal α, there exist a sequence of nonzero natural numbers $(n_1, \ldots, n_k)$ and sequence of ordinals $(\gamma_1, \ldots, \gamma_k)$ such that

$$\gamma_k < \gamma_{k-1} < \cdots < \gamma_1$$

and

$$\alpha = \omega^{\gamma_1} n_1 + \omega^{\gamma_2} n_2 + \cdots + \omega^{\gamma_k} n_k \ .$$

⟨2⟩1. LET: α be an ordinal

⟨2⟩2. ASSUME: as an induction hypothesis that, for all $\beta < \alpha$, the theorem holds.

⟨2⟩3. ASSUME: w.l.o.g. $\alpha \neq 0$

⟨2⟩4. LET: γ_1, n_1, ρ_1 be the unique ordinals such that $0 \neq n_1 < \omega$, $\rho_1 < \omega^{\gamma_1}$, and $\alpha = \omega^{\gamma_1} n_1 + \rho_1$

⟨2⟩5. LET: $(\gamma_2, \ldots, \gamma_k)$ and $(n_2, \ldots, n_k)$ be sequences such that $\gamma_k < \gamma_{k-1} < \cdots < \gamma_2$ and $\rho_1 = \omega^{\gamma_2} n_2 + \cdots + \omega^{\gamma_k} n_k$

⟨2⟩6. $\gamma_2 < \gamma_1$

  PROOF: Since $\omega^{\gamma_2} \leq \rho_1 < \omega^{\gamma_1}$

⟨1⟩2. If

$$\gamma_k < \gamma_{k-1} < \cdots < \gamma_1$$
$$\gamma_k' < \gamma_{k-1}' < \cdots < \gamma_1'$$

and

$$\omega^{\gamma_1} n_1 + \omega^{\gamma_2} n_2 + \cdots + \omega^{\gamma_k} n_k = \omega^{\gamma_1'} n_1' + \omega^{\gamma_2'} n_2' + \cdots + \omega^{\gamma_k'} n_k'$$

then $\gamma_i = \gamma_i'$ for all i and $n_i = n_i'$ for all i

  PROOF: Prove by induction on i using the Logarithm Theorem.

□

Definition 8.8.2 (Cantor Normal Form). For any ordinal α, the *Cantor normal form* of α is the expression $\alpha = \omega^{\gamma_1} n_1 + \cdots + \omega^{\gamma_k} n_k$ such that n_1, ..., n_k are nonzero natural numbers and $\gamma_k < \gamma_{k-1} < \cdots < \gamma_1$.

Chapter 9

Infinite Cardinals

9.1 Alephs

Definition 9.1.1 (Aleph). Let $\aleph$ be the unique order isomorphism between **On** and the class of infinite cardinals.

Proposition 9.1.2. *The operation $\aleph$ is normal.*

PROOF: Proposition 6.4.8 and Lemma 7.2.7. $\square$

Definition 9.1.3 (Continuum Hypothesis). The *continuum hypothesis* is the statement that $\aleph_1 = 2^{\aleph_0}$.

Definition 9.1.4 (Generalised Continuum Hypothesis). The *generalised continuum hypothesis* is the statement that, for all α, $\aleph_{\alpha^+} = 2^{\aleph_\alpha}$.

9.2 Beths

Definition 9.2.1 (Beth). Define the operation $\beth : \textbf{On} \to \textbf{Card}$ by transfinite recursion as follows:

$$\beth_0 := \aleph_0$$
$$\beth_{\alpha^+} := 2^{\beth_\alpha}$$
$$\beth_\lambda := \bigcup_{\alpha < \lambda} \beth_\alpha \qquad\qquad (\lambda \text{ a limit ordinal})$$

Proposition 9.2.2. $\beth$ *is a normal operation.*

PROOF: It is continuous by definition, and $\beth_\alpha < \beth_{\alpha^+}$ by Cantor's Theorem. $\square$

Proposition 9.2.3. *The continuum hypothesis is equivalent to the statement $\beth_1 = \aleph_1$.*

   The generalised continuum hypothesis is equivalent to the statement $\beth = \alpha$.

PROOF: Immediate from definitions. $\square$

Chapter 10

The Cumulative Hierarchy

Definition 10.0.1 (Cumulative Hierarchy). Define the function $V : \mathbf{On} \to \mathbf{V}$ by transfinite recursion thus:

$$V_\alpha = \bigcup_{\beta < \alpha} \mathcal{P} V_\beta$$

Proposition 10.0.2. *For all $\alpha \in \mathbf{On}$, V_α is a transitive set.*

PROOF:
$\langle 1 \rangle$1. LET: $\alpha \in \mathbf{On}$
$\langle 1 \rangle$2. ASSUME: as transfinite induction hypothesis $\forall \beta < \alpha . V_\beta$ is a transitive set.
$\langle 1 \rangle$3. For all $\beta < \alpha$, $\mathcal{P} V_\beta$ is a transitive set.
   PROOF: Proposition 1.5.4.
$\langle 1 \rangle$4. V_α is a transitive set.
   PROOF: Proposition 1.5.3.
▯

Proposition 10.0.3. *For any ordinals α and β, if $\beta < \alpha$ then $V_\beta \subseteq V_\alpha$.*

PROOF: Since $V_\beta \in \mathcal{P} V_\beta \subseteq V_\alpha$ and V_α is a transitive set. ▯

Theorem 10.0.4.

   1. $V_0 = \emptyset$

   2. $\forall \alpha \in \mathbf{On}. V_{\alpha^+} = \mathcal{P} V_\alpha$

   3. For any limit ordinal λ, $V_\lambda = \bigcup_{\alpha < \lambda} V_\alpha$.

PROOF:
$\langle 1 \rangle$1. $V_0 = \emptyset$
   PROOF: Immediate from definition.
$\langle 1 \rangle$2. $\forall \alpha \in \mathbf{On}. V_{\alpha^+} = \mathcal{P} V_\alpha$
   PROOF:

⟨2⟩1. LET: $\alpha \in \mathbf{On}$

⟨2⟩2. For all $\beta < \alpha$ we have $\mathcal{P}V_\beta \subseteq \mathcal{P}V_\alpha$

PROOF: Propositions 1.4.7 and 10.0.3.

⟨2⟩3. $V_{\alpha^+} = \mathcal{P}V_\alpha$

$$V_{\alpha^+} = \bigcup_{\beta < \alpha^+} \mathcal{P}V_\beta$$

$$= \bigcup_{\beta < \alpha} \mathcal{P}V_\beta \cup \mathcal{P}V_\alpha$$

$$\mathcal{P}V_\alpha \qquad\qquad \square$$

⟨1⟩3. For any limit ordinal λ, $V_\lambda = \bigcup_{\alpha < \lambda} V_\alpha$

PROOF:

⟨2⟩1. $V_\lambda \subseteq \bigcup_{\alpha < \lambda} V_\alpha$

PROOF:

$$V_\lambda = \bigcup_{\alpha < \lambda} \mathcal{P}V_\alpha$$

$$= \bigcup_{\alpha < \lambda} V_{\alpha^+} \qquad\qquad (\langle 1 \rangle 2)$$

$$\subseteq \bigcup_{\alpha < \lambda} V_\alpha$$

⟨2⟩2. $\bigcup_{\alpha < \lambda} V_\alpha \subseteq V_\lambda$

PROOF: Proposition 10.0.3.

□

Proposition 10.0.5. *For every set A, there exists an ordinal α such that $A \in V_\alpha$.*

PROOF:

⟨1⟩1. Let us say a set A is *grounded* iff there exists an ordinal α such that $A \in V_\alpha$.

⟨1⟩2. For any set A, if every element of A is grounded, then A is grounded.

⟨2⟩1. LET: A be a set.

⟨2⟩2. $S = \{\alpha \mid \exists a \in A.\alpha$ is the least ordinal such that $a \in V_\alpha\}$

PROOF: S is a set by an Axiom of Replacement.

⟨2⟩3. LET: $\beta = \sup S$

⟨2⟩4. $A \subseteq V_\beta$

⟨3⟩1. LET: $a \in A$

⟨3⟩2. LET: α be the least ordinal such that $a \in V_\beta$

⟨3⟩3. $\alpha \in S$

⟨3⟩4. $\alpha \leq \beta$

⟨3⟩5. $a \in V_\beta$

⟨2⟩5. $A \in V_{\beta^+}$

⟨1⟩3. ASSUME: for a contradiction there exists an ungrounded set.

⟨1⟩4. PICK a transitive set B that has an ungrounded member.

PROOF: Pick a transitive set c, and take B to be the transitive closure of $\{c\}$.

$\langle 1 \rangle 5$. LET: $A = \{x \in B \mid x \text{ is ungrounded}\}$
$\langle 1 \rangle 6$. PICK $m \in A$ such that $m \cap A = \emptyset$
   PROOF: Axiom of Regularity.
$\langle 1 \rangle 7$. Every member of m is grounded.
   $\langle 2 \rangle 1$. ASSUME: for a contradiction $x \in m$ is ungrounded.
   $\langle 2 \rangle 2$. $x \in B$
     PROOF: Since B is transitive ($\langle 1 \rangle 4$).
   $\langle 2 \rangle 3$. $x \in A$
     PROOF: $\langle 1 \rangle 5$
   $\langle 2 \rangle 4$. Q.E.D.
     PROOF: This contradicts $\langle 1 \rangle 6$.
$\langle 1 \rangle 8$. m is grounded.
   PROOF: $\langle 1 \rangle 2$
$\langle 1 \rangle 9$. Q.E.D.
   PROOF: This contradicts $\langle 1 \rangle 6$.
$\square$

Definition 10.0.6 (Rank)**.** The *rank* of a set A is the least ordinal α such that $A \in V_{\alpha^+}$.

Proposition 10.0.7. *For any set A we have*

$$\operatorname{rank} A = \bigcup_{a \in A} (\operatorname{rank} a)^+$$

PROOF:
$\langle 1 \rangle 1$. LET: $\alpha = \bigcup_{a \in A} (\operatorname{rank} a)^+$
$\langle 1 \rangle 2$. $A \subseteq V_\alpha$
   $\langle 2 \rangle 1$. LET: $a \in A$
   $\langle 2 \rangle 2$. $a \in V_{(\operatorname{rank} a)^+}$
   $\langle 2 \rangle 3$. $a \in V_\alpha$
$\langle 1 \rangle 3$. $A \in V_{\alpha^+}$
$\langle 1 \rangle 4$. If $A \subseteq V_\beta$ then $\alpha \leq \beta$
   $\langle 2 \rangle 1$. ASSUME: $A \subseteq V_\beta$
   $\langle 2 \rangle 2$. For all $a \in A$ we have $(\operatorname{rank} a)^+ \leq \beta$
     PROOF: Since $a \in V_\beta$.
   $\langle 2 \rangle 3$. $\alpha \leq \beta$
$\square$

Corollary 10.0.7.1. *For any sets a and b, if $a \in b$ then $\operatorname{rank} a < \operatorname{rank} b$.*

Proposition 10.0.8. *For any ordinal number α we have $\operatorname{rank} \alpha = \alpha$.*

PROOF:
$\langle 1 \rangle 1$. LET: α be an ordinal.
$\langle 1 \rangle 2$. ASSUME: as transfinite induction hypothesis $\forall \beta < \alpha. \operatorname{rank} \beta = \beta$
$\langle 1 \rangle 3$. $\operatorname{rank} \alpha = \bigcup_{\beta < \alpha} \beta^+$

Proof:

$$\operatorname{rank}\alpha = \bigcup_{\beta<\alpha}(\operatorname{rank}\beta)^{+}$$

$$= \bigcup_{\beta<\alpha}\beta^{+}$$

$\langle 1\rangle 4$. $\bigcup_{\beta<\alpha}\beta^{+} \leq \alpha$
  Proof: Since for all $\beta < \alpha$ we have $\beta^{+} \leq \alpha$.
$\langle 1\rangle 5$. $\alpha \leq \bigcup_{\beta<\alpha}\beta^{+}$
  $\langle 2\rangle 1$. Let: $\gamma = \bigcup_{\beta<\alpha}\beta^{+}$
  $\langle 2\rangle 2$. Assume: for a contradiction $\gamma < \alpha$
  $\langle 2\rangle 3$. $\gamma^{+} \leq \bigcup_{\beta<\alpha}\beta^{+} = \gamma$
  $\langle 2\rangle 4$. Q.E.D.
    Proof: This is a contradiction.

□

Chapter 11

Group Theory

11.1 Groups

Definition 11.1.1 (Group). A *group* G consists of a set G and a function
$\cdot : G^2 \to G$ such that:

1. $\cdot$ is associative

2. There exists $e \in G$ such that $\forall x \in G.xe = x$ and $\forall x \in G.\exists y \in G.xy = e$.

Proposition 11.1.2. *The inverse of an element in a group is unique.*

PROOF:
$\langle 1 \rangle 1$. ASSUME: b and b' are inverses of a.
$\langle 1 \rangle 2$. $b = b'$
   PROOF:
$$b = be$$
$$= bab'$$
$$= eb'$$
$$= b'$$

□

Definition 11.1.3. We write x^{-1} for the inverse of x.

Proposition 11.1.4. *In any group, if $ab = ac$ then $b = c$.*

PROOF:
$$b = eb$$
$$= a^{-1}ab$$
$$= a^{-1}ac$$
$$= ec$$
$$= c \qquad\qquad\qquad □$$

11.2   Abelian Groups

Definition 11.2.1 (Abelian group)**.** An *Abelian group* is a group whose multiplication is commutative.

We may say we are writing an Abelian group *additively*, meaning we write $a + b$ for ab, 0 for e and $-a$ for a^{-1}. In this case we write $a - b$ for ab^{-1}.

Chapter 12

Ring Theory

12.1   Rings

Definition 12.1.1 (Commutative Ring). A *commutative ring* consists of a set R and two binary operations $+, \cdot$ on R such that:

- D is an Abelian group under $+$. Let us write 0 for its identity element.

- $\cdot$ is commutative and associative, and distributes over $+$.

- $\cdot$ has an identity element 1 that is different from 0.

Proposition 12.1.2. *In any commutative ring, $0x = 0$.*

PROOF:
$$(0 + 0)x = 0x$$
$$\therefore 0x + 0x = 0x + 0$$
$$\therefore 0x = 0 \qquad \text{(Proposition 11.1.4)} \square$$

Proposition 12.1.3. *In any commutative ring, $(-a)b = -(ab)$.*

PROOF:
$$ab + (-a)b = (a + (-a))b$$
$$= 0b$$
$$= 0 \qquad \text{(Proposition 12.1.2)} \square$$

12.2   Ordered Rings

Definition 12.2.1 (Ordered Commutative Ring). An *ordered commutative ring* consists of a commutative ring R with a linear order $<$ on R such that:

- for all $x, y, z \in R$, we have $x < y$ if and only if $x + z < y + z$.

- for all $x, y, z \in R$, if $0 < z$ then we have $x < y$ if and only if $xz < yz$.

Proposition 12.2.2. *In any ordered commutative ring, $0 < 1$.*

PROOF: If $1 < 0$ then we have $0 < -1$ and so $0 < (-1)(-1) = 1$, which is a contradiction. □

Proposition 12.2.3. *The ordering on an ordered commutative ring is dense; that is, if $x < y$ then there exists z such that $x < z < y$.*

PROOF: Take $z = (x + y)/2$. □

12.3   Integral Domains

Definition 12.3.1 (Integral Domain)**.** An *integral domain* is a commutative ring such that, for all $a, b \in D$, if $ab = 0$ then $a = 0$ or $b = 0$.

Proposition 12.3.2. *In any integral domain, if $ab = ac$ and $a \neq 0$ then $b = c$.*

PROOF: We have $a(b - c) = 0$ and $a \neq 0$ so $b - c = 0$ hence $b = c$. □

Definition 12.3.3 (Ordered Integral Domain)**.** An *ordered integral domain* is an ordered commutative ring that is an integral domain.

Chapter 13

Field Theory

13.1 Fields

Definition 13.1.1 (Field). A *field* F is a commutative ring such that $0 \neq 1$ and, for all $x \in F$, if $x \neq 0$ then there exists $y \in F$ such that $xy = 1$.

Proposition 13.1.2. *Every field is an integral domain.*

PROOF: If $ab = 0$ and $a \neq 0$ then $b = a^{-1}ab = 0$. □

Proposition 13.1.3. *In any field F, we have $F - \{0\}$ is an Abelian group under multiplication.*

PROOF: Immediate from the definition. □

Definition 13.1.4 (Field of Fractions). Let D be an integral domain. The *field of fractions* of D is the quotient set $F = (D \times (D - \{0\}))/ \sim$ where

$$(a, b) \sim (c, d) \Leftrightarrow ad = bc$$

under

$$[(a, b)] + [(c, d)] = [(ad + bc, bd)]$$
$$[(a, b)][(c, d)] = [(ac, bd)]$$

We prove this is a field.

PROOF:
⟨1⟩1. $\sim$ is an equivalence relation on $D \times (D - \{0\})$.
  PROOF:
    ⟨2⟩1. $\sim$ is reflexive.
      PROOF: We always have $ab = ba$.
    ⟨2⟩2. $\sim$ is symmetric.
      PROOF: If $ad = bc$ then $cb = da$.

$\langle 2 \rangle 3.$ $\sim$ is transitive.

    $\langle 3 \rangle 1.$ ASSUME: $(a, b) \sim (c, d) \sim (e, f)$

    $\langle 3 \rangle 2.$ $ad = bc$ and $cf = de$

    $\langle 3 \rangle 3.$ $adf = bde$

      PROOF: $adf = bcf = bde$

    $\langle 3 \rangle 4.$ $af = be$

      PROOF: Proposition 12.3.2.

□

$\langle 1 \rangle 2.$ Addition is well-defined.

  PROOF:

  $\langle 2 \rangle 1.$ If $b \neq 0$ and $d \neq 0$ then $bd \neq 0$.

    PROOF: Since D is an integral domain.

  $\langle 2 \rangle 2.$ If $ab' = a'b$ and $cd' = c'd$ then $(ad + bc)b'd' = (a'd' + b'c')bd$.

    PROOF:

$$
\begin{aligned}
(ad + bc)b'd' &= ab'dd' + bb'cd' \\
&= a'bdd' + bb'c'd \\
&= (a'd' + b'c')bd
\end{aligned}
$$

□

$\langle 1 \rangle 3.$ Multiplication is well-defined.

  PROOF:

  $\langle 2 \rangle 1.$ If $b \neq 0$ and $d \neq 0$ then $bd \neq 0$.

    PROOF: Since D is an integral domain.

  $\langle 2 \rangle 2.$ If $[(a, b)] = [(a', b')]$ and $[(c, d)] = [(c', d')]$ then $[(ac, bd)] = [(a'c', b'd')]$.

    PROOF: If $ab' = a'b$ and $cd' = c'd$ then $acb'd' = a'c'bd$.

□

$\langle 1 \rangle 4.$ Addition is commutative.

  PROOF: $[(a, b)] + [(c, d)] = [(ad + bc, bd)] = [(cb + da, db)] = [(c, d)] + [(a, b)]$ □

$\langle 1 \rangle 5.$ Addition is associative.

  PROOF:

$$
\begin{aligned}
[(a, b)] + ([(c, d)] + [(e, f)]) &= [(a, b)] + [(cf + de, df)] \\
&= [(adf + bcf + bde, bdf)] \\
&= [(ad + bc, bd)] + [(e, f)] \\
&= ([(a, b)] + [(c, d)]) + [(e, f)] \qquad □
\end{aligned}
$$

$\langle 1 \rangle 6.$ For any $x \in F$ we have $x + [(0, 1)] = x$

  PROOF: $[(a, b)] + [(0, 1)] = [(a \cdot 1 + b \cdot 0, b \cdot 1)] = [(a, b)]$ □

$\langle 1 \rangle 7.$ For any $x \in F$, there exists $y \in F$ such that $x + y = [(0, 1)]$.

  PROOF: $[(a, b)] + [(-a, b)] = [(ab - ab, b^2)] = [(0, b^2)] = [(0, 1)]$ □

$\langle 1 \rangle 8.$ Multiplication is commutative.

  PROOF: $[(a, b)][(c, d)] = [(c, d)][(a, b)] = [(ac, bd)]$. □

$\langle 1 \rangle 9.$ Multiplication is assocative.

  PROOF: $[(a, b)]([(c, d)][(e, f)]) = ([(a, b)][(c, d)])[(e, f)] = [(ace, bdf)]$. □

$\langle 1 \rangle 10.$ For any $x \in F$ we have $x[(1, 1)] = x$

  PROOF: $[(a, b)][(1, 1)] = [(a, b)]$ □

$\langle 1 \rangle 11.$ For any non-zero $x \in F$, there exists $y \in F$ such that $xy = [(1, 1)]$.

PROOF:

$\langle 2\rangle$1. LET: $[(a,b)] \in \mathbb{Q}$

$\langle 2\rangle$2. ASSUME: $[(a,b)] \neq [(0,1)]$

$\langle 2\rangle$3. $a \neq 0$

$\langle 2\rangle$4. $[(a,b)][(b,a)] = [(1,1)]$

□

□

Definition 13.1.5. For any field F, let $N(F)$ be the intersection of all the subsets $S \subseteq F$ such that $1 \in S$ and $\forall x \in S . x + 1 \in S$.

Definition 13.1.6 (Characteristic Zero)**.** A field F has *characteristic 0* iff $0 \notin N(F)$.

Proposition 13.1.7. *In a field F with characteristic 0, the function $n : \mathbb{N} \to N(F)$ defined by*

$$n(0) = 1$$
$$n(x+1) = n(x) + 1$$

is a bijection.

PROOF:

$\langle 1\rangle$1. n is injective.

   $\langle 2\rangle$1. ASSUME: for a contradiction $n(i) = n(j)$ with $i \neq j$

   $\langle 2\rangle$2. ASSUME: w.l.o.g. $i < j$

   $\langle 2\rangle$3. $n(j - i) = 0$

   $\langle 2\rangle$4. Q.E.D.

      PROOF: This contradicts the fact that F has characteristic 0.

$\langle 1\rangle$2. n is surjective.

   PROOF: Since ran n is a subset of F that includes 1 and is closed under $+1$.

□

Definition 13.1.8. In any field F, let

$$I(F) = N(F) \cup \{0\} \cup \{-x \mid x \in N(F)\}$$

Definition 13.1.9. In any field F, let

$$Q(F) = \{x/y \mid x, y \in I(F), y \neq 0\}$$

Proposition 13.1.10. *$Q(F)$ is the smallest subfield of F.*

PROOF: $Q(F)$ is closed under $+$ and $\cdot$, and any subset of F closed under $+$ and $\cdot$ that contains 0 and 1 must include $Q(F)$. □

Theorem 13.1.11. *Let F and G be fields of characteristic 0. Then there exists a unique field isomorphism between $Q(F)$ and $Q(G)$.*

PROOF:

⟨1⟩1. LET: $\phi : N(F) \to N(G)$ be the unique function such that $\phi(1) = 1$ and
　　　　　$\forall x \in N(F).\phi(x + 1) = \phi(x) + 1$.

⟨1⟩2. ϕ is a bijection.
　　PROOF: Similar to Proposition 13.1.7.

⟨1⟩3. $\forall x, y \in N(F).\phi(x + y) = \phi(x) + \phi(y)$
　　PROOF: Induction on y.

⟨1⟩4. $\forall x, y \in N(F).\phi(xy) = \phi(x)\phi(y)$
　　PROOF: Induction on y.

⟨1⟩5. Extend ϕ to a bijection $I(F) \cong I(G)$ such that $\forall x, y \in I(F).\phi(x + y) = \phi(x) + \phi(y)$ and $\forall x, y \in I(F).\phi(xy) = \phi(x)\phi(y)$

　⟨2⟩1. Define $\phi(0) = 0$ and $\phi(-x) = -\phi(x)$ for $x \in N(F)$

　　⟨3⟩1. $0 \notin N(F)$

　　⟨3⟩2. For all $x \in N(F)$ we have $-x \notin N(F)$
　　　PROOF: Then we would have $x + -x = 0 \in N(F)$.

　　⟨3⟩3. For all $x \in N(F)$ we have $-x \neq 0$

　⟨2⟩2. For all $x, y \in I(F)$ we have $\phi(x + y) = \phi(x) + \phi(y)$
　　PROOF: Case analysis on x and y.

　⟨2⟩3. For all $x, y \in I(F)$ we have $\phi(xy) = \phi(x)\phi(y)$
　　PROOF: Case analysis on x and y.

⟨1⟩6. Extend ϕ to a bijection $Q(F) \cong Q(G)$ such that $\forall x, y \in Q(F).\phi(x + y) = \phi(x) + \phi(y)$ and $\forall x, y \in Q(F).\phi(xy) = \phi(x)\phi(y)$

　⟨2⟩1. Define $\phi(x/y) = \phi(x)/\phi(y)$

⟨1⟩7. ϕ is unique.

　⟨2⟩1. LET: θ satisfy the theorem.

　⟨2⟩2. For all $x \in N(F)$ we have $\theta(x) = \phi(x)$

　⟨2⟩3. For all $x \in I(F)$ we have $\theta(x) = \phi(x)$

　⟨2⟩4. For all $x \in Q(F)$ we have $\theta(x) = \phi(x)$

□

13.2   Ordered Fields

Definition 13.2.1 (Ordered Field)**.** An *ordered field* is an ordered commutative ring that is a field.

Proposition 13.2.2. *Every ordered field F has characteristic 0.*

PROOF: We have $0 < n$ for all $n \in N(F)$. □

Proposition 13.2.3. *Let F be a field of characteristic 0. Then there exists a unique relation $<$ on $Q(F)$ that makes $Q(F)$ into an ordered field.*

PROOF: Easy. □

Corollary 13.2.3.1. *Let F and G be ordered fields. Let ϕ be the unique field isomorphism between $Q(F)$ and $Q(G)$. Then ϕ is an ordered field isomorphism.*

Definition 13.2.4 (Archimedean)**.** An ordered field F is *Archimedean* iff

$$\forall x \in F.\exists n \in N(F).n > x \ .$$

Proposition 13.2.5. *Let F be an Archimedean ordered field. Let $x, y \in F$ with $x > 0$. Then there exists $n \in N(F)$ such that $nx > y$.*

PROOF: Pick $n > y/x$. $\square$

Proposition 13.2.6. *Let F be an Archimedean ordered field. For all $x, y \in F$, if $x < y$, then there exists $r \in Q(F)$ such that $x < r < y$.*

PROOF:
⟨1⟩1. CASE: $x > 0$
  ⟨2⟩1. PICK $n \in N(F)$ such that $n(y - x) > 1$
    PROOF: Proposition 13.2.5.
  ⟨2⟩2. $ny > 1 + nx$
  ⟨2⟩3. LET: m be the least element of $N(F)$ such that $m > nx$.
  ⟨2⟩4. $m - 1 \leq nx$
  ⟨2⟩5. $nx < m < ny$
  ⟨2⟩6. $x < m/n < y$
⟨1⟩2. CASE: $x \leq 0$
  ⟨2⟩1. PICK $k \in N(F)$ such that $k > -x$
  ⟨2⟩2. $0 < x + k < y + k$
  ⟨2⟩3. PICK $r \in Q(F)$ such that $x + k < r < y + k$
    PROOF: ⟨1⟩1
  ⟨2⟩4. $x < r - k < y$

Definition 13.2.7 (Complete)**.** An ordered field F is *complete* iff every nonempty subset of F bounded above has a least upper bound.

Proposition 13.2.8. *Every complete ordered field is Archimedean.*

PROOF:
⟨1⟩1. LET: F be a complete ordered field.
⟨1⟩2. LET: $x \in F$
⟨1⟩3. ASSUME: for a contradiction there is no member of $N(F)$ greater than x.
⟨1⟩4. x is an upper bound for $N(F)$.
⟨1⟩5. LET: $y = \sup N(F)$
⟨1⟩6. PICK $n \in N(F)$ such that $y - 1 < n$
⟨1⟩7. $y < n + 1$
⟨1⟩8. Q.E.D.
  PROOF: This is a contradiction.
$\square$

Proposition 13.2.9. *Let F be a complete ordered field and $a \in F$ be nonnegative. Then there exists $b \in F$ such that $b^2 = a$.*

PROOF:
⟨1⟩1. LET: $B = \{x \in F \mid 0 \leq x \leq 1 + a\}$
⟨1⟩2. LET: $\phi : B \to B$ be the function

$$\phi(x) = x + \frac{1}{2(1+a)}(a - x^2) \ .$$

$\langle 1 \rangle 3$. ϕ is strictly monotone.

    $\langle 2 \rangle 1$. LET: $0 \leq x < y \leq 1 + a$

    $\langle 2 \rangle 2$. $1 - \frac{x+y}{2(1+a)} > 0$

    $\langle 2 \rangle 3$. $\phi(y) - \phi(x) = (y - x)(1 - \frac{x+y}{2(1+a)}) > 0$

    $\langle 2 \rangle 4$. $\phi(x) < \phi(y)$

$\langle 1 \rangle 4$. PICK $b \in B$ such that $\phi(b) = b$.

    PROOF: Knaster Fixed-Point Theorem.

$\langle 1 \rangle 5$. $b^2 = a$

$\Box$

Theorem 13.2.10 (Uniqueness of the Complete Ordered Field)**.** *If F and G are complete ordered fields, then there exists a unique bijection $\phi : F \cong G$ such that, for all $x, y \in F$,*

$$\phi(x + y) = \phi(x) + \phi(y)$$
$$\phi(xy) = \phi(x)\phi(y)$$

This bijection also satisfies: for all $x, y \in F$,

$$x < y \Leftrightarrow \phi(x) < \phi(y) \ .$$

PROOF:

$\langle 1 \rangle 1$. PICK a bijection $\phi : Q(F) \cong Q(G)$ such that, for all $x, y \in Q(F)$,
$$\phi(x + y) = \phi(x) + \phi(y)$$
$$\phi(xy) = \phi(x)\phi(y)$$
$$x < y \Leftrightarrow \phi(x) < \phi(y)$$

    PROOF: Corollary 13.2.3.1.

$\langle 1 \rangle 2$. $Q(F)$ intersects every interval in F.

    PROOF: Proposition 13.2.6.

$\langle 1 \rangle 3$. $Q(G)$ intersects every interval in G.

    PROOF: Proposition 13.2.6.

$\langle 1 \rangle 4$. PICK an order isomorphism $\psi : F \cong G$ that extends ϕ.

    PROOF: Theorem 5.1.23.

$\langle 1 \rangle 5$. $\forall x, y \in F.\psi(x + y) = \psi(x) + \psi(y)$

    $\langle 2 \rangle 1$. LET: $x, y \in F$

    $\langle 2 \rangle 2$. $\psi(x) + \psi(y) \not< \psi(x + y)$

        $\langle 3 \rangle 1$. ASSUME: for a contradiction $\psi(x) + \psi(y) < \psi(x + y)$

        $\langle 3 \rangle 2$. PICK $r' \in Q(G)$ such that $\psi(x) < r' < \psi(x + y) - \psi(y)$

        $\langle 3 \rangle 3$. PICK $s' \in Q(G)$ such that $\psi(y) < s' < \psi(x + y) - r'$

        $\langle 3 \rangle 4$. $r' + s' < \psi(x + y)$

        $\langle 3 \rangle 5$. PICK $r, s \in Q(F)$ such that $\phi(r) = r'$ and $\phi(s) = s'$

        $\langle 3 \rangle 6$. $\phi(r + s) = r' + s'$

        $\langle 3 \rangle 7$. $\psi(x) < \psi(r)$

        $\langle 3 \rangle 8$. $\psi(y) < \psi(s)$

        $\langle 3 \rangle 9$. $\psi(x + y) > \psi(r + s)$

        $\langle 3 \rangle 10$. $x < r$

$\langle 3 \rangle 11.$ $y < s$

$\langle 3 \rangle 12.$ $x + y > r + s$

$\langle 3 \rangle 13.$ Q.E.D.

PROOF: This is a contradiction.

$\langle 2 \rangle 3.$ $\psi(x + y) \not< \psi(x) + \psi(y)$

PROOF: Similar.

$\langle 1 \rangle 6.$ $\forall x, y \in F.\psi(xy) = \psi(x)\psi(y)$

$\langle 2 \rangle 1.$ LET: $x, y \in F$

$\langle 2 \rangle 2.$ CASE: x and y are positive.

$\langle 3 \rangle 1.$ $\psi(x)\psi(y) \not< \psi(xy)$

$\langle 4 \rangle 1.$ ASSUME: for a contradiction $\psi(x)\psi(y) < \psi(xy)$

$\langle 4 \rangle 2.$ PICK $r' \in Q(G)$ such that $\psi(x) < r' < \psi(xy)/\psi(y)$

$\langle 4 \rangle 3.$ PICK $s' \in Q(G)$ such that $\psi(y) < s' < \psi(xy)/r'$

$\langle 4 \rangle 4.$ $r's' < \psi(xy)$

$\langle 4 \rangle 5.$ PICK $r, s \in Q(F)$ such that $\phi(r) = r'$ and $\phi(s) = s'$

$\langle 4 \rangle 6.$ $\phi(rs) = r's'$

$\langle 4 \rangle 7.$ $x < r$, $y < s$ and $rs < xy$

$\langle 4 \rangle 8.$ Q.E.D.

PROOF: This is a contradiction.

$\langle 3 \rangle 2.$ $\psi(xy) \not< \psi(x)\psi(y)$

PROOF: Similar.

$\langle 2 \rangle 3.$ CASE: x and y are not both positive.

PROOF: Follows from $\langle 2 \rangle 2$ since $\psi(-x) = -\psi(x)$ by $\langle 1 \rangle 5$.

$\langle 1 \rangle 7.$ For any field isomorphism $\theta : F \cong G$, we have $\theta = \psi$.

$\langle 2 \rangle 1.$ $\theta \restriction Q(F) = \phi$

PROOF: Theorem 13.1.11.

$\langle 2 \rangle 2.$ θ is strictly monotone.

$\langle 3 \rangle 1.$ LET: $x, y \in F$ with $x < y$

$\langle 3 \rangle 2.$ $y - x > 0$

$\langle 3 \rangle 3.$ PICK $z \in F$ such that $z^2 = y - x$

$\langle 3 \rangle 4.$ $\theta(z)^2 = \theta(y) - \theta(x)$

$\langle 3 \rangle 5.$ $\theta(y) - \theta(x) > 0$

$\langle 3 \rangle 6.$ $\theta(x) < \theta(y)$

$\langle 2 \rangle 3.$ $\theta = \psi$

PROOF: By the uniqueness of ψ.

□

Chapter 14

Number Systems

14.1 The Integers

Definition 14.1.1. The set of *integers* $\mathbb{Z}$ is the quotient set $\mathbb{N}^2 / \sim$, where $(m, n) \sim (p, q)$ iff $m + q = n + p$.

We prove $\sim$ is an equivalence relation on $\mathbb{N}^2$.

PROOF:
$\langle 1 \rangle 1.$ $\sim$ is reflexive.
   PROOF: For all $m, n \in \mathbb{N}$ we have $m + n = n + m$.
$\langle 1 \rangle 2.$ $\sim$ is symmetric.
   PROOF: If $m + q = n + p$ then $p + n = q + m$.
$\langle 1 \rangle 3.$ $\sim$ is transitive.
   $\langle 2 \rangle 1.$ ASSUME: $(m, n) \sim (p, q) \sim (r, s)$
   $\langle 2 \rangle 2.$ $m + q = n + p$ and $p + s = q + r$
   $\langle 2 \rangle 3.$ $m + q + s = n + q + r$
   $\langle 2 \rangle 4.$ $m + s = n + r$
     PROOF: By cancellation.
☐

Definition 14.1.2 (Addition). Define *addition* $+$ on $\mathbb{Z}$ by $[(m, n)] + [(p, q)] = [(m + p, n + q)]$.

We prove this is well-defined.

PROOF: If $m + n' = n + m'$ and $p + q' = q + p'$ then $m + p + n' + q' = n + q + m' + p'$.
☐

Proposition 14.1.3. *Addition on $\mathbb{Z}$ is commutative.*

PROOF: $[(m, n)] + [(p, q)] = [(m + p, n + q)] = [(p + m, q + n)] = [(p, q)] + [(m, n)]$.
☐

Proposition 14.1.4. *Addition on $\mathbb{Z}$ is associative.*

PROOF: $[(m,n)] + ([(p,q)] + [(r,s)]) = [(m+p+r, n+q+s)] = ([(m,n)] + [(p,q)]) + [(r,s)]$. □

Proposition 14.1.5. *Given natural numbers m and n, we have $[(m,0)] = [(n,0)]$ iff $m = n$.*

PROOF: Immediate from definitions. □

Definition 14.1.6. We identify any natural number n with the integer $[(n,0)]$.

Proposition 14.1.7. *Addition on integers agrees with addition on natural numbers.*

PROOF: Since $[(m,0)] + [(n,0)] = [(m+n, 0)]$. □

Proposition 14.1.8. *For all $a \in \mathbb{Z}$ we have $a + 0 = a$.*

PROOF: $[(m,n)] + [(0,0)] = [(m+0, n+0)] = [(m,n)]$. □

Proposition 14.1.9. *For all $a \in \mathbb{Z}$, there exists $b \in \mathbb{Z}$ such that $a + b = 0$.*

PROOF: $[(m,n)] + [(n,m)] = [(m+n, m+n)] = [(0,0)]$ □

Proposition 14.1.10. *The integers form an Abelian group under addition.*

PROOF: Proposition 14.1.3, 14.1.4, 14.1.8, 14.1.9. □

Definition 14.1.11. Define multiplication $\cdot$ on $\mathbb{Z}$ by: $[(m,n)][(p,q)] = [(mp+nq, mq+np)]$.
    We prove this is well defined.

PROOF:
$\langle 1 \rangle 1.$ ASSUME: $m + n' = n + m'$ and $p + q' = q + p'$
        PROVE: $mp + nq + m'q' + n'p' = mq + np + m'p' + n'q'$
$\langle 1 \rangle 2.$ $mp + n'p = np + m'p$
$\langle 1 \rangle 3.$ $nq + m'q = mq + n'q$
$\langle 1 \rangle 4.$ $m'p + m'q' = m'q + m'p'$
$\langle 1 \rangle 5.$ $n'q + n'p' = n'p + n'q'$
$\langle 1 \rangle 6.$ $mp + n'p + nq + m'q + m'p + m'q' + n'q + n'p' = np + m'p + mq + n'q + m'q + m'p' + n'p + n'q'$
$\langle 1 \rangle 7.$ $mp + nq + m'q' + n'p' = mq + np + m'p' + n'q'$
    PROOF: By cancellation.
□

Proposition 14.1.12. *Multiplication on integers agrees with multiplication on natural numbers.*

PROOF: Since $[(m,0)][(n,0)] = [(mn+0, m0+n0)] = [(mn,0)]$. □

Proposition 14.1.13. *Multiplication on $\mathbb{Z}$ is commutative.*

PROOF: $[(m,n)][(p,q)] = [(mp+nq, mq+np)] = [(pm+qn, pn+qm)] = [(p,q)][(m,n)]$. □

Proposition 14.1.14. *Multiplication on $\mathbb{Z}$ is associative.*

PROOF:
$$
\begin{aligned}
[(m,n)]([(p,q)][(r,s)]) &= [(m,n)][(pr+qs,ps+qr)] \\
&= [(mpr+mqs+nps+nqr, mps+mqr+npr+nqs)] \\
&= [(mp+nq, mq+np)][(r,s)] \\
&= ([(m,n)][(p,q)])[(r,s)] \qquad\qquad \square
\end{aligned}
$$

Proposition 14.1.15. *Multiplication distributes over addition.*

PROOF:
$$
\begin{aligned}
[(m,n)]([(p,q)]+[(r,s)]) &= [(m,n)][(p+r, q+s)] \\
&= [(mp+mr+nq+ns, np+nr+mq+ms)] \\
[(m,n)][(p,q)]+[(m,n)][(r,s)] &= [(mp+nq, mq+np)]+[(mr+ns, ms+nr)] \\
&= [(mp+nq+mr+ns, mq+np+ms+nr)] \qquad \square
\end{aligned}
$$

Proposition 14.1.16. *For any integer a we have $a1 = a$.*

PROOF: Since $[(m,n)][(1,0)] = [(m1+n0, m0+n1)] = [(m,n)]$. $\square$

Proposition 14.1.17. *For any integeres a and b, if $ab = 0$ then $a = 0$ or $b = 0$.*

PROOF:
$\langle 1 \rangle 1$. ASSUME: $[(m,n)][(p,q)] = [(0,0)]$
$\langle 1 \rangle 2$. $mp+nq = mq+np$
$\langle 1 \rangle 3$. ASSUME: $[(m,n)] \neq [(0,0)]$
$\langle 1 \rangle 4$. $m \neq n$
    PROVE: $p = q$
$\langle 1 \rangle 5$. CASE: $m < n$
  $\langle 2 \rangle 1$. $p \not< q$
    PROOF: If $p < q$ then $mq+np < mp+nq$ by Proposition 8.4.6.
  $\langle 2 \rangle 2$. $q \not< p$
    PROOF: If $q < p$ then $mp+nq < mq+np$ by Proposition 8.4.6.
  $\langle 2 \rangle 3$. $p = q$
    PROOF: By trichotomy.
$\langle 1 \rangle 6$. CASE: $n < m$
  PROOF: Similar.
$\square$

Proposition 14.1.18. *The integers $\mathbb{Z}$ form an integral domain.*

PROOF: Propositions 14.1.13, 14.1.14, 14.1.15, 14.1.16, 14.1.17, 14.1.10. $\square$

Definition 14.1.19. Define $<$ on $\mathbb{Z}$ by $[(m,n)] < [(p,q)]$ if and only if $m+q < n+p$.
    We prove this is well-defined.

PROOF:

⟨1⟩1. ASSUME: $m + n' = n + m'$ and $p + q' = q + p'$.
    PROVE: $m + q < n + p$ if and only if $m' + q' < n' + p'$
⟨1⟩2. $m + q < n + p$ if and only if $m' + q' < n' + p'$
  PROOF:
$$m + q < n + p \Leftrightarrow m + n' + q < n + n' + p \qquad \text{(Corollary 6.5.7.1)}$$
$$\Leftrightarrow m' + n + q < n + n' + p$$
$$\Leftrightarrow m' + q < n' + p \qquad \text{(Corollary 6.5.7.1)}$$
$$\Leftrightarrow m' + q + p' < n' + p + p' \qquad \text{(Corollary 6.5.7.1)}$$
$$\Leftrightarrow m' + q' + p < n' + p + p'$$
$$\Leftrightarrow m' + q' < n' + p' \qquad \text{(Corollary 6.5.7.1)}\square$$

Proposition 14.1.20. *The ordering on the integers agrees with the ordering on the natural numbers.*

PROOF: We have $[(m, 0)] < [(n, 0)]$ iff $m < n$. $\square$

Proposition 14.1.21. $<$ *is a linear order on* $\mathbb{Z}$.

PROOF:
⟨1⟩1. $<$ is irreflexive.
  PROOF: We never have $m + n < m + n$.
⟨1⟩2. $<$ is transitive.
  ⟨2⟩1. ASSUME: $[(m, n)] < [(p, q)] < [(r, s)]$
  ⟨2⟩2. $m + q < n + p$ and $p + s < q + r$
  ⟨2⟩3. $m + q + s < n + q + r$
    PROOF: $m + q + s < n + p + s < n + q + r$
  ⟨2⟩4. $m + s < n + r$
    PROOF: Corollary 6.5.7.1.
⟨1⟩3. $<$ is total.
  PROOF: Given natural numbers m, n, p and q, either $m + q < n + p$, or $m + q = n + p$, or $n + p < m + q$.
$\square$

Definition 14.1.22 (Positive)**.** An integer a is *positive* iff $a > 0$.

Theorem 14.1.23. *For any integers a, b and c, we have $a < b$ if and only if $a + c < b + c$.*

PROOF:
⟨1⟩1. If $a < b$ then $a + c < b + c$.
  ⟨2⟩1. LET: $a = [(m, n)]$, $b = [(p, q)]$ and $c = [(r, s)]$.
  ⟨2⟩2. ASSUME: $a < b$
  ⟨2⟩3. $m + q < n + p$
  ⟨2⟩4. $m + r + q + s < n + r + p + s$
  ⟨2⟩5. $[(m + r, n + s)] < [(p + r, q + s)]$
  ⟨2⟩6. $a + c < b + c$

$\langle 1\rangle 2$. If $a + c < b + c$ then $a < b$.
    PROOF: From $\langle 1\rangle 1$ and Proposition 5.2.6.
▯

Proposition 14.1.24. *Let a, b and c be integers. If $0 < c$, then $a < b$ if and only if $ac < bc$.*

PROOF:
$\langle 1\rangle 1$. LET: $c = [(r, s)]$
$\langle 1\rangle 2$. ASSUME: $0 < c$
$\langle 1\rangle 3$. $s < r$
$\langle 1\rangle 4$. For all integers a and b, if $a < b$ then $ac < bc$
    $\langle 2\rangle 1$. LET: $a = [(m, n)]$, $b = [(p, q)]$.
    $\langle 2\rangle 2$. ASSUME: $a < b$
    $\langle 2\rangle 3$. $m + q < n + p$
    $\langle 2\rangle 4$. $(m + q)r + (p + n)s < (m + q)s + (p + n)r$
      PROOF: Proposition 8.4.6, $\langle 1\rangle 3$, $\langle 2\rangle 3$.
    $\langle 2\rangle 5$. $mr + ns + ps + qr < ms + nr + pr + qs$
    $\langle 2\rangle 6$. $[(mr + ns, ms + nr)] < [(pr + qs, ps + qr)]$
    $\langle 2\rangle 7$. $ac < bc$
$\langle 1\rangle 5$. For all integers a and b, if $ac < bc$ then $a < b$
    PROOF: From $\langle 1\rangle 4$ and Proposition 5.2.6.
▯

Proposition 14.1.25. *Let a be a positive integer. For any integer b, there exists $k \in \mathbb{N}$ such that $b < ak$.*

PROOF:
$\langle 1\rangle 1$. CASE: $b \le 0$
    PROOF: Take $k = 1$.
$\langle 1\rangle 2$. CASE: $b > 0$
    PROOF: Take $k = b + 1$.
▯

14.2   The Rationals

Definition 14.2.1 (Rational Numbers)**.** The set $\mathbb{Q}$ of *rational numbers* is the field of fractions over the integers.

Proposition 14.2.2. *For any integers a and b, we have $[(a, 1)] = [(b, 1)]$ iff $a = b$.*

PROOF: Immediate from definitions. ▯

    Henceforth we identify any integer a with the rational number $[(a, 1)]$.

Proposition 14.2.3. *Addition on the rationals agrees with addition on the integers.*

PROOF: $[(a, 1)] + [(b, 1)] = [(a \cdot 1 + b \cdot 1, 1 \cdot 1)] = [(a + b, 1)]$. □

Proposition 14.2.4. *Multiplication on the rationals agrees with multiplication on the integers.*

PROOF: $[(a, 1)][(b, 1)] = [(ab, 1)]$ □

Definition 14.2.5. Define the ordering $<$ on the rationals by: if b and d are positive, then $[(a, b)] < [(c, d)]$ iff $ad < bc$.
    We prove this is well-defined.

PROOF:
⟨1⟩1. For any rational q, there exist integers a, b with b positive such that
        $q = [(a, b)]$.
    PROOF: Since $[(a, b)] = [(-a, -b)]$, and if $b \neq 0$ then one of b and $-b$ is
    positive.
⟨1⟩2. If b, b', d and d' are positive, $[(a, b)] = [(a', b')]$, and $[(c, d)] = [(c', d')]$,
        then $ad < bc$ iff $a'd' < b'c'$.
    PROOF:
    ⟨2⟩1. If $ad < bc$ then $a'd' < b'c'$.
        ⟨3⟩1. ASSUME: $ad < bc$
        ⟨3⟩2. $ab'd < bb'c$
        ⟨3⟩3. $a'bd < bb'c$
        ⟨3⟩4. $a'd < b'c$
        ⟨3⟩5. $a'dd' < b'cd'$
        ⟨3⟩6. $a'dd' < b'c'd$
        ⟨3⟩7. $a'd' < b'c'$
    ⟨2⟩2. If $a'd' < b'c'$ then $ad < bc$.
        PROOF: Similar.
□

Proposition 14.2.6. *The ordering on the rationals agrees with the ordering on the integers.*

PROOF: We have $[(a, 1)] < [(b, 1)]$ if and only if $a < b$. □

Proposition 14.2.7. *The relation $<$ is a linear ordering on $\mathbb{Q}$.*

PROOF:
⟨1⟩1. $<$ is irreflexive.
    PROOF: We never have $ab < ab$.
⟨1⟩2. $<$ is transitive.
    ⟨2⟩1. ASSUME: $[(a, b)] < [(c, d)] < [(e, f)]$ where b, d and f are positive.
    ⟨2⟩2. $ad < bc$ and $cf < de$
    ⟨2⟩3. $adf < bde$
        PROOF: $adf < bcf < bde$
    ⟨2⟩4. $af < be$
⟨1⟩3. $<$ is total.
    PROOF: For any integers a, b, c, d, we have $ad < bc$ or $ad = bc$ or $bc < ad$.

☐

Proposition 14.2.8. *For any rationals r, s and t, we have $r < s$ if and only if $r + t < s + t$.*

PROOF:
⟨1⟩1. LET: a, b, c, d, e, f be integers with b, d and f positive.
⟨1⟩2. $[(a, b)] + [(e, f)] < [(c, d)] + [(e, f)]$ if and only if $[(a, b)] < [(c, d)]$.

PROOF:
$$
\begin{aligned}
[(a, b)] + [(e, f)] < [(c, d)] + [(e, f)] &\Leftrightarrow [(af + be, bf)] < [(cf + de, df)] \\
&\Leftrightarrow (af + be)df < (cf + de)bf \\
&\Leftrightarrow afdf + bedf < cfbf + debf \\
&\Leftrightarrow afdf < cfbf \\
&\Leftrightarrow ad < bc \\
&\Leftrightarrow [(a, b)] < [(c, d)]
\end{aligned}
$$

☐

Corollary 14.2.8.1. *For any rational r, we have $r < 0$ if and only if $0 < -r$.*

Definition 14.2.9 (Absolute Value). For any rational r, the *absolute value* of r is defined by
$$
|r| := \begin{cases} -r & \text{if } 0 < -r \\ r & \text{otherwise} \end{cases}
$$

Proposition 14.2.10. *For any rationals r, s and t, if t is positive then $r < s$ iff $rt < st$.*

PROOF:
⟨1⟩1. LET: $r = [(a, b)]$, $s = [(c, d)]$ and $t = [(e, f)]$ where b, d and f are positive.
⟨1⟩2. ASSUME: $0 < t$
⟨1⟩3. $e > 0$
⟨1⟩4. $rt < st$ iff $r < s$

PROOF:
$$
\begin{aligned}
rt < st &\Leftrightarrow [(ae, bf)] < [(ce, df)] \\
&\Leftrightarrow aedf < cebf \\
&\Leftrightarrow ad < bc \\
&\Leftrightarrow r < s
\end{aligned}
$$

☐

Corollary 14.2.10.1. *The rationals form an ordered field.*

Proposition 14.2.11. *Let p be a positive rational. For any rational number r, there exists $k \in \mathbb{N}$ such that $r < pk$.*

PROOF:
⟨1⟩1. LET: $p = a/b$ and $r = c/d$ where a, b and d are positive.

$\langle 1 \rangle 2$. PICK $k \in \mathbb{N}$ such that $bc < adk$
    PROOF: Proposition 14.1.25.
$\langle 1 \rangle 3$. $r < pk$
☐

Proposition 14.2.12. $\mathbb{Q} \approx \mathbb{N}$

PROOF: Arrange the rationals in order $0/1$, $1/1$, $1/2$, $0/2$, $-1/2$, $-1/1$, $-2/1$, $-2/2$, $-2/3$, $-1/3$, $0/3$, $1/3$, $2/3$, etc. then remove all duplicates. ☐

14.3   The Real Numbers

Definition 14.3.1 (Cauchy Sequence). A *Cauchy sequence* is a sequence (q_n) of rationals such that, for every positive rational ϵ, there exists $k \in \mathbb{N}$ such that $\forall m, n > k. |q_m - q_n| < \epsilon$.

Definition 14.3.2 (Dedekind Cut). A *Dedekind cut* is a set $x \subseteq \mathbb{Q}$ such that:

1. $\emptyset \neq x \neq \mathbb{Q}$

2. x is closed downwards.

3. x has no greatest member.

   The set $\mathbb{R}$ of *real numbers* is the set of Dedekind cuts.

Proposition 14.3.3. *For any rational q, we have $\{r \in \mathbb{Q} \mid r < q\} \in \mathbb{R}$.*

PROOF:
$\langle 1 \rangle 1$. LET: $q \in \mathbb{Q}$
$\langle 1 \rangle 2$. LET: $q \downarrow = \{r \mid r < q\}$
$\langle 1 \rangle 3$. $q \downarrow \neq \emptyset$
    PROOF: We have $q - 1 \in q \downarrow$.
$\langle 1 \rangle 4$. $q \downarrow \neq \mathbb{Q}$
    PROOF: Since $q \notin q \downarrow$.
$\langle 1 \rangle 5$. $q \downarrow$ is closed downwards.
    PROOF: Trivial.
$\langle 1 \rangle 6$. $q \downarrow$ has no greatest element.
    PROOF: For all $r \in q \downarrow$ we have $r < (q + r)/2 \in q \downarrow$.
☐

Proposition 14.3.4. *For rationals q and r, we have $q = r$ if and only if $\{s \in \mathbb{Q} \mid s < q\} = \{s \in \mathbb{Q} \mid s < r\}$.*

PROOF:
$\langle 1 \rangle 1$. LET: $q \downarrow = \{s \in \mathbb{Q} \mid s < q\}$
$\langle 1 \rangle 2$. LET: $r \downarrow = \{s \in \mathbb{Q} \mid s < r\}$
$\langle 1 \rangle 3$. If $q = r$ then $q \downarrow = r \downarrow$
    PROOF: Trivial.

$\langle 1 \rangle 4$. If $q < r$ then $q \downarrow \neq r \downarrow$
   PROOF: We have $q \in r \downarrow$ and $q \notin q \downarrow$.
$\langle 1 \rangle 5$. If $r < q$ then $q \downarrow \neq r \downarrow$
   PROOF: We have $r \in q \downarrow$ and $q \notin q \downarrow$.
☐

   Henceforth we identify a rational q with the real number $\{r \in \mathbb{Q} \mid r < q\}$.

Definition 14.3.5. Define the ordering $<$ on $\mathbb{R}$ by: $x < y$ iff $x \subsetneq y$.

Proposition 14.3.6. *The ordering on the reals agrees with the ordering on the rationals.*

PROOF:
$\langle 1 \rangle 1$. LET: $q, r \in \mathbb{Q}$
$\langle 1 \rangle 2$. LET: $q \downarrow = \{s \in \mathbb{Q} \mid s < q\}$.
$\langle 1 \rangle 3$. LET: $r \downarrow = \{s \in \mathbb{Q} \mid s < r\}$.
     PROVE: $q < r$ iff $q \downarrow \subsetneq r \downarrow$
$\langle 1 \rangle 4$. If $q < r$ then $q \downarrow \subsetneq r \downarrow$
  $\langle 2 \rangle 1$. ASSUME: $q < r$
  $\langle 2 \rangle 2$. $q \downarrow \subseteq r \downarrow$
    PROOF: If $s < q$ then $s < r$.
  $\langle 2 \rangle 3$. $q \downarrow \neq r \downarrow$
    PROOF: Proposition 14.3.4.

Definition 14.3.19 (Absolute Value)**.** The *absolute value* of a real number x is defined to be
$$|x| = \begin{cases} x & \text{if } 0 \le x \\ -x & \text{if } x < 0 \end{cases}$$

Definition 14.3.20 (Multiplication)**.** Define *multiplication* $\cdot$ on $\mathbb{R}$ as follows:

- If x and y are non-negative then

$$xy = 0 \cup \{rs \mid 0 \le r \in x \wedge 0 \le s \in y\}\ .$$

- If x and y are both negative then

$$xy = (-x)(-y)\ .$$

- If one of x and y is negative and one is non-negative then

$$xy = -(|x||y|)\ .$$

We prove this is well-defined.

PROOF:
$\langle 1 \rangle 1.$ LET: x and y be non-negative reals.
      PROVE: xy is real.
$\langle 1 \rangle 2.\ xy \neq \emptyset$
  PROOF: Since $-1 \in xy$.
$\langle 1 \rangle 3.\ xy \neq \mathbb{Q}$
  $\langle 2 \rangle 1.$ PICK $r \notin x$ and $s \notin y$
        PROVE: $rs \notin xy$
  $\langle 2 \rangle 2.\ 0 \le r$ and $0 \le s$
    PROOF: Since $0 \subseteq x$ and $0 \subseteq y$.
  $\langle 2 \rangle 3.$ ASSUME: for a contradiction $rs \in xy$
  $\langle 2 \rangle 4.$ PICK r' and s' such that $0 \le r' \in x$, $0 \le s' \in y$ and $rs = r's'$
  $\langle 2 \rangle 5.\ r' < r$
  $\langle 2 \rangle 6.\ s' < s$
  $\langle 2 \rangle 7.\ r's' < rs$
  $\langle 2 \rangle 8.$ Q.E.D.
    PROOF: This is a contradiction.
$\langle 1 \rangle 4.\ xy$ is closed downwards.
  $\langle 2 \rangle 1.$ LET: $q \in xy$ and $r < q$

$\langle 2 \rangle 2$. CASE: $q \in 0$
　　PROOF: Then $r < q < 0$ so $r \in xy$
$\langle 2 \rangle 3$. CASE: $q = s_1 s_2$ where $0 \le s_1 \in x$ and $0 \le s_2 \in y$
　　$\langle 3 \rangle 1$. ASSUME: w.l.o.g. $0 \le r$
　　$\langle 3 \rangle 2$. $0 < s_1$ and $0 < s_2$
　　$\langle 3 \rangle 3$. $r/s_2 < s_1$
　　$\langle 3 \rangle 4$. $r/s_2 \in x$
　　$\langle 3 \rangle 5$. $r = (r/s_2)s_2 \in xy$
$\langle 1 \rangle 5$. xy has no greatest element.
　$\langle 2 \rangle 1$. LET: $q \in xy$
　$\langle 2 \rangle 2$. CASE: $q \in 0$

Linear Algebra

Chapter 16

Vector Spaces

16.1   Vector Spaces

Definition 16.1.1 (Vector Space). Let K be either $\mathbb{R}$ or $\mathbb{C}$. A *vector space* over K is a triple $(V, +, \cdot)$ such that:

- V is a nonempty set, whose elemnts are called *vectors*;

- $+ : V^2 \to V$

- $\cdot : K \times V \to V$

such that the following hold for all $u, v, w \in V$ and $\alpha, \beta \in K$:

1. $u + v = v + u$

2. $u + (v + w) = (u + v) + w$

3. For every $u, v \in V$ there exists $w \in V$ such that $u + w = v$

4. $\alpha(\beta v) = (\alpha\beta)v$

5. $(\alpha + \beta)v = \alpha v + \beta v$

6. $\alpha(u + v) = \alpha u + \alpha v$

7. $1v = v$

Elements of K are called *scalars*.

We write *real vector space* for 'vector space over $\mathbb{R}$', and *complex vector space* for 'vector space over $\mathbb{C}$'.

Proposition 16.1.2. *Let K be either $\mathbb{R}$ and $\mathbb{C}$. The set $\{0\}$ is a vector space over K under the unique functions $+ : \{0\}^2 \to \{0\}$, $\cdot : K \times \{0\} \to \{0\}$.*

PROOF: Each axiom holds trivially because $x = y$ holds for all $x, y \in \{0\}$. $\square$

Proposition 16.1.3. *The set $\mathbb{R}$ is a real vector space under real addition and real multiplication.*

PROOF: TODO — after we have proved these facts about $\mathbb{R}$. □

Proposition 16.1.4. *The set $\mathbb{C}$ is a real vector space under complex addition and complex multiplication.*

PROOF: TODO

Proposition 16.1.5. *The set $\mathbb{C}$ is a complex vector space under complex addition and complex multiplication.*

PROOF: TODO

Proposition 16.1.6. *Let K be either $\mathbb{R}$ or $\mathbb{C}$. Let $\{V_i\}_{i\in I}$ be a family of vector spaces over K. Then $\prod_{i\in I} V_i$ is a vector space over K under the operations given by*

$$\{x_i\}_{i\in I} + \{y_i\}_{i\in I} = \{x_i + y_i\}_{i\in I}$$
$$\alpha\{x_i\}_{i\in I} = \{\alpha x_i\}_{i\in I}$$

PROOF: Each axiom follows from the corresponding axiom in V_i. □□

Corollary 16.1.6.1. *Let V be a vector space over K. For any set I, we have V^I is a vector space over K.*

Corollary 16.1.6.2. *Let $n \in \mathbb{Z}_+$. Then $\mathbb{R}^n$ is a real vector space, and $\mathbb{C}^n$ is both a real and a complex vector space, under*

$$(x_1, \ldots, x_n) + (y_1, \ldots, y_n) = (x_1 + y_1, \ldots, x_n + y_n)$$
$$\lambda(x_1, \ldots, x_n) = (\lambda x_1, \ldots, \lambda x_n)$$

Proposition 16.1.7. *Let V be a vector space over K. Then there exists a unique $0 \in V$ such that, for all $v \in V$, we have $v + 0 = v$.*

PROOF:
$\langle 1\rangle 1$. There exists $0 \in V$ such that $\forall v \in V.v + 0 = v$
  $\langle 2\rangle 1$. Pick $v \in V$
  $\langle 2\rangle 2$. Pick $0 \in V$ such that $v + 0 = v$
    PROOF: Axiom 3.
  $\langle 2\rangle 3$. For all $u \in V$, we have $u + 0 = u$
    $\langle 3\rangle 1$. LET: $u \in V$
    $\langle 3\rangle 2$. PICK $u' \in V$ such that $v + u' = u$
      PROOF: Axiom 3.
    $\langle 3\rangle 3$. $u + 0 = u$

$$
\begin{aligned}
u + 0 &= v + u' + 0 & (\langle 3\rangle 2)\\
&= v + u' & (\langle 2\rangle 2)\\
&= u & (\langle 3\rangle 2)
\end{aligned}
$$

$\langle 1 \rangle 2$. If $0, 0' \in V$ are such that $\forall v \in V. v + 0 = v$ and $\forall v \in V. v + 0' = v$, then $0 = 0'$.

  $\langle 2 \rangle 1$. LET: $0, 0' \in V$

  $\langle 2 \rangle 2$. ASSUME: $\forall v \in V. v + 0 = v$

  $\langle 2 \rangle 3$. ASSUME: $\forall v \in V. v + 0' = v$

  $\langle 2 \rangle 4$. $0 = 0'$

$$
\begin{aligned}
0 &= 0 + 0' & (\langle 2 \rangle 2) \\
&= 0' & (\langle 2 \rangle 3)
\end{aligned}
$$

□

Proposition 16.1.8. *Let V be a vector space. For any $v \in V$, there exists a unique $-v \in V$ such that $v + (-v) = 0$.*

PROOF:

$\langle 1 \rangle 1$. LET: $v \in V$

$\langle 1 \rangle 2$. There exists $-v \in V$ such that $v + (-v) = u$

  PROOF: Axiom 3.

$\langle 1 \rangle 3$. If $v + x = 0$ and $v + y = 0$ then $x = y$

  $\langle 2 \rangle 1$. ASSUME: $v + x = 0$

  $\langle 2 \rangle 2$. ASSUME: $v + y = 0$

  $\langle 2 \rangle 3$. $x = y$

    PROOF:

$$

&= w + 0 && \text{(Proposition 16.1.8)} \\
&= w && \text{(Proposition 16.1.7)}
\end{aligned}
$$

Proposition 16.1.11. *Let V be a vector space over K. Let $\lambda \in K$. Then $\lambda 0 = 0$.*

PROOF:
$\langle 1 \rangle 1$. $\lambda 0 + \lambda 0 = \lambda 0 + 0$
   PROOF:

$$
\begin{aligned}
\lambda 0 + \lambda 0 &= \lambda(0 + 0) && \text{(Axiom 6)} \\
&= \lambda 0 && \text{(Proposition 16.1.7)}
\end{aligned}
$$

$\langle 1 \rangle 2$. $\lambda 0 = 0$
   PROOF: Proposition 16.1.10.
□

Proposition 16.1.12. *Let V be a vector space over K. Let $\lambda \in K$ and $v \in V$. If $\lambda v = 0$ then $\lambda = 0$ or $v = 0$.*

PROOF:
$\langle 1 \rangle 1$. ASSUME: $\lambda \neq 0$
$\langle 1 \rangle 2$. ASSUME: $\lambda v = 0$
$\langle 1 \rangle 3$. $v = 0$
   PROOF:

$$
\begin{aligned}
v &= 1v && \text{(Axiom 7)} \\
&= \lambda^{-1} \lambda v \\
&= \lambda^{-1} 0 && (\langle 1 \rangle 2) \\
&= 0
\end{aligned}
$$

□

Proposition 16.1.13. *Let V be a vector space over K. For all $v \in V$ we have $0v = 0$.*

PROOF:
$\langle 1 \rangle 1$. $0v + 0 = 0v + 0v$

$$0v + 0 = 0v \qquad \text{(Proposition 16.1.7)}$$
$$= (0 + 0)v$$
$$= 0v + 0v \qquad \text{(Axiom 5)}$$

$\langle 1 \rangle 2.$ $0v = 0$

   Proof: Proposition 16.1.10, $\langle 1 \rangle 1$.

$\square$

Proposition 16.1.14. *Let V be a vector space over K. Let $v \in V$. Then $(-1)v = -v$.*

Proof:

$\langle 1 \rangle 1.$ $v + (-1)v = 0$

   Proof:

$$v + (-1)v = 1v + (-1)v \qquad \text{(Axiom 7)}$$
$$= (1 + (-1))v \qquad \text{(Axiom 5)}$$
$$= 0v$$
$$= 0 \qquad \text{(Proposition 16.1.13)}$$

$\langle 1 \rangle 2.$ Q.E.D.

   Proof: Proposition 16.1.8.

16.2 Subspaces

Definition 16.2.1 (Subspace)**.** Let V be a vector space over K and $U \subseteq V$. Then U is a *subspace* of V iff $\forall \alpha, \beta \in K. \forall u, v \in U. \alpha u + \beta v \in U$. It is a *proper* subspace iff in addition $U \neq V$.

Proposition 16.2.2. *Let V be a vector space over K and U a subspace of V. Then U is a vector space over K under the restrictions of the operations of V.*

Proof: Each of the axioms follows from the corresponding axiom in V. For axiom 3, we have if $u, v \in U$ then $v - u = 1v + (-1)u \in U$. $\square$

Proposition 16.2.3. *Every vector space is a subspace of itself.*

Proof: Trivial. $\square$

Proposition 16.2.4. *Let Ω be a subset of $\mathbb{R}^N$. Let $\mathcal{C}(\Omega)$ be the set of all continuous functions $\Omega \to \mathbb{C}$. Then $\mathcal{C}(\Omega)$ is a subspace of $\mathbb{C}^\Omega$.*

Proof: If $f, g : \Omega \to \mathbb{C}$ are continuous then so is $\alpha f + \beta g$. $\square$

Proposition 16.2.5. *Let Ω be an open set in $\mathbb{R}^N$. Let $\mathcal{C}^k(\Omega)$ be the set of all continuous functions $\Omega \to \mathbb{C}$ with continuous partial derivatives of order k. Then $\mathcal{C}^k(\Omega)$ is a subspace of $\mathbb{C}^\Omega$.*

PROOF: If $f, g : \Omega \to \mathbb{C}$ have continuous partial derivatives of order k then so does $\alpha f + \beta g$. $\square$

Proposition 16.2.6. *Let Ω be an open set in $\mathbb{R}^N$. Let $\mathcal{C}^\infty(\Omega)$ be the set of all infinitely differentiable functions $\Omega \to \mathbb{C}$. Then $\mathcal{C}^\infty(\Omega)$ is a subspace of $\mathbb{C}^\Omega$.*

PROOF: If $f, g : \Omega \to \mathbb{C}$ are infinitely differentiable then so is $\alpha f + \beta g$. $\square$

Proposition 16.2.7. *Let Ω be an open set in $\mathbb{R}^N$. Let $\mathcal{P}(\Omega)$ be the set of all polynomials in N variables considered as functions $\Omega \to \mathbb{C}$. Then $\mathcal{P}(\Omega)$ is a subspace of $\mathbb{C}^\Omega$.*

PROOF: If $f, g : \Omega \to \mathbb{C}$ are polynomials in N variables then so is $\alpha f + \beta g$. $\square$

Proposition 16.2.8. *Let V be a vector space and U_1, U_2 subspaces of V. If $U_1 \subseteq U_2$ then U_1 is a subspace of U_2.*

PROOF: Trivial. $\square$

Proposition 16.2.9. *Let V be a vector space over K. The intersection of a set of subspaces of V is a subspace of V.*

PROOF:
$\langle 1 \rangle 1$. LET: $\mathcal{U}$ be a set of subspaces of V.
$\langle 1 \rangle 2$. LET: $u, v \in \bigcap \mathcal{U}$ and $\lambda, \mu \in K$
$\langle 1 \rangle 3$. $\lambda u + \mu v \in \bigcap \mathcal{U}$
  $\langle 2 \rangle 1$. LET: $U \in \mathcal{U}$
  $\langle 2 \rangle 2$. $u, v \in U$
     PROOF: $\langle 1 \rangle 2$, $\langle 2 \rangle 1$.
  $\langle 2 \rangle 3$. $\lambda u + \beta v \in U$
     PROOF: $\langle 1 \rangle 1$, $\langle 1 \rangle 2$, $\langle 2 \rangle 1$, $\langle 2 \rangle 2$.
$\square$

Proposition 16.2.10. *The set of all bounded complex sequences is a proper subspace of $\mathbb{C}^{\mathbb{N}}$.*

PROOF: If (x_n) and (y_n) are bounded then so is $(\lambda x_n + \mu y_n)$. $\square$

Proposition 16.2.11. *The set of all convergent complex sequences is a proper subspace of the space of all bounded complex sequences.*

PROOF: If (x_n) and (y_n) converge then so does $(\lambda x_n + \mu y_n)$. $\square$

Proposition 16.2.12. *The set l^p of all sequences (x_n) in $\mathbb{C}$ such that $\sum_n |x_n|^p < \infty$ is a subspace of $\mathbb{C}^{\mathbb{N}}$.*

PROOF: It is closed under addition by Proposition 15.0.2, and it is easy to see that it is closed under scalar multiplication. $\square$

16.3 Linear Independence and Bases

Definition 16.3.1 (Linear Combination)**.** Let V be a vector space over K. Let $v, v_1, \ldots, v_n \in V$. Then v is a *linear combination* of v_1, ..., v_n iff there exist scalars $\lambda_1, \ldots, \lambda_n \in K$ such that

$$v = \lambda_1 v_1 + \cdots + \lambda_n v_n \ .$$

Definition 16.3.2 (Linearly Independent)**.** Let V be a vector space over K. Let $A \subseteq V$. Then A is *linearly independent* iff, for all $\lambda_1, \ldots, \lambda_n \in K$ and $v_1, \ldots, v_n \in A$, if $\lambda_1 v_1 + \cdots + \lambda_n v_n = 0$ then $\lambda_1 = \cdots = \lambda_n = 0$.

Definition 16.3.3 (Span)**.** Let V be a vector space over K and $A \subseteq V$. The *span* of A, or the subspace of V *spanned* by A, is the set of all linear combinations of vectors in A.

Proposition 16.3.4. *Let V be a vector space over K and $A \subseteq V$. Then* $\operatorname{span} A$ *is a subspace of V.*

PROOF: Given $\alpha, \beta \in K$ and $\lambda_1 u_1 + \cdots + \lambda_m u_m, \mu_1 v_1 + \cdots + \mu_n v_n \in \operatorname{span} A$, we have

$$\alpha(\lambda_1 u_1 + \cdots + \lambda_m u_m) + \beta(\mu_1 v_1 + \cdots + \mu_n v_n)$$
$$= \alpha\lambda_1 u_1 + \cdots + \alpha\lambda_m u_m + \beta\mu_1 v_1 + \cdots + \beta\mu_n v_n$$
$$\in \operatorname{span} A \qquad\qquad\qquad \square$$

Definition 16.3.5 (Basis)**.** Let V be a vector space over K and $B \subseteq V$. Then B is a *basis* for V iff B is linearly independent and $\operatorname{span} B = V$.

Definition 16.3.6 (Finite Dimensional)**.** A vector space is *finite dimensional* iff there exists a finite basis; otherwise it is *infinite dimensional.*

Proposition 16.3.7. *In a finite dimensional space, any two bases have the same size.*

TODO

Definition 16.3.8 (Dimension)**.** The *dimension* of a finite dimensional vector space V, $\dim V$, is the number of vectors in any basis.

Proposition 16.3.9. *Let K be either $\mathbb{R}$ or $\mathbb{C}$. Then K^n as a vector space over K has dimension n.*

PROOF: The vectors with one component 1 and all other components 0 form a basis. $\square$

Proposition 16.3.10. *As a real vector space, $\mathbb{C}^n$ has dimension $2n$.*

PROOF: The vectors with one component either 1 or i and all other components 0 form a basis. $\square$

Proposition 16.3.11. *Let Ω be a nonempty open set in $\mathbb{R}^n$. The space $\mathcal{C}(\Omega)$ is infinite dimensional.*

PROOF: Let $\pi_1 : \mathbb{R}^n \to \mathbb{R}$ be the first projection. The functions 1, $\pi_1(x)$, $\pi_1(x)^2$, $\pi_1(x)^3$, ... form an infinite linearly independent set in $\mathcal{C}(\Omega)$. $\square$

Proposition 16.3.12. *The spaces $\mathcal{C}^k(\mathbb{R}^n)$ and $\mathcal{C}^\infty(\mathbb{R}^n)$ are infinite dimensional.*

PROOF: The monomials 1, x, x^2, ... form an infinite linearly independent set. $\square$

16.4   Linear Mappings

Definition 16.4.1 (Kernel)**.** Let U and V be vector spaces and $T : U \to V$. The *kernel* of T is
$$\ker T := \{u \in U \mid T(u) = 0\} \ .$$

Definition 16.4.2 (Linear Mapping)**.** Let U and V be vector spaces over K. A function $L : U \to V$ is a *linear mapping* iff $\forall x, y \in U. \forall \alpha, \beta \in K. L(\alpha x + \beta y) = \alpha L(x) + \beta L(y)$.

Proposition 16.4.3. *Let U and V be vector spaces over K. The set of linear mappings from U to V is a subspace of V^U.*

16.5   Eigenvalues and Eigenvectors

Definition 16.5.1 (Eigenvalue and Eigenvector)**.** Let V be a vector space over K. Let $A : V \to V$ be a linear transformation. Let $v \in V$ and $\lambda \in K$. Then v is an *eigenvector* of A with *eigenvalue* λ iff $A(v) = \lambda v$.

Chapter 17

Normed Spaces

Definition 17.0.1 (Norm). Let K be either $\mathbb{R}$ or $\mathbb{C}$. Let V be a vector space over K. A *norm* on V is a function $\| \ \| : V \to \mathbb{R}$ such that, for all $u, v \in V$ and $\lambda \in K$:

1. If $\|v\| = 0$ then $v = 0$.

2. $\|\lambda v\| = |\lambda|\|v\|$

3. (*Triangle Inequality*) $\|u + v\| \leq \|u\| + \|v\|$

A *normed space* over K is a pair $(V, \| \ \|)$ where V is a vector space over K and $\| \ \|$ is a norm on V.

Proposition 17.0.2. *In a normed space,* $\|0\| = 0$.

PROOF: $\|0\| = |0|\|0\| = 0$ by Axiom 2. $\square$

Proposition 17.0.3. *Let V be a normed vector space over K. For all $v \in V$ we have $\|v\| \geq 0$.*

PROOF:
$$
\begin{aligned}
0 &= \|0\| & \text{(Proposition 17.0.2)} \\
&= \|v - v\| \\
&\leq \|v\| + \| - v\| & \text{(Triangle Inequality)} \\
&= 2\|v\| & \text{(Axiom 2)}
\end{aligned}
$$

Proposition 17.0.4. *Let V be a normed space. Let $u, v \in V$. Then*

$$
\big|\|u\| - \|v\|\big| \leq \|u - v\| \ .
$$

137

PROOF:

$$\|u\| \leq \|u - v\| + \|v\| \qquad \text{(Triangle Inequality)}$$
$$\therefore \|u\| - \|v\| \leq \|u - v\|$$
$$\|v\| \leq \|v - u\| + \|u\| \qquad \text{(Triangle Inequality)}$$
$$= \|u - v\| + \|u\| \qquad \text{(Axiom 2)}$$
$$\therefore \|v\| - \|u\| \leq \|u - v\|$$

Definition 17.0.5 (Euclidean Norm)**.** The *Euclidean norm* on K^n is defined by

$$\|(x_1, \ldots, x_n)\| = \sqrt{|x_1|^2 + \cdots + |x_n|^2} \ .$$

Proposition 17.0.6. *The Euclidean norm on K^n is a norm.*

PROOF:
$\langle 1 \rangle 1$. If $\|\vec{x}\| = 0$ then $\vec{x} = \vec{0}$
  PROOF: If $\sqrt{|x_1|^2 + \cdots + |x_n|^2} = 0$ then $x_1 = \cdots = x_n = 0$.
$\langle 1 \rangle 2$. $\|\lambda \vec{x}\| = |\lambda| \|\vec{x}\|$
  PROOF:

$$\|\lambda \vec{x}\| \sqrt{|\lambda x_1|^2 + \cdots + |\lambda x_n|^2}$$
$$= \sqrt{|\lambda|^2 |x_1|^2 + \cdots + |\lambda|^2 |x_n|^2}$$
$$= |\lambda| \sqrt{|x_1|^2 + \cdots + |x_n|^2}$$
$$= |\lambda| \|\vec{x}\|$$

$\langle 1 \rangle 3$. $\|\vec{u} + \vec{v}\| \leq \|\vec{u}\| + \|\vec{v}\|$
  PROOF:

$$\|\vec{u} + \vec{v}\|^2 = |u_1 + v_1|^2 + \cdots + |u_n + v_n|^2$$
$$= |u_1|^2 + \cdots + |u_n|^2 + |v_1|^2 + \cdots + |v_n|^2$$
$$+ 2|u_1||v_1| + \cdots + 2|u_n||v_n|$$
$$\leq \|\vec{u}\|^2 + \|\vec{v}\|^2 + 2|u_1 v_1 + \cdots + u_n v_n|$$
$$\leq \|\vec{u}\|^2 + \|\vec{v}\|^2 + 2\|\vec{u}\|\|\vec{v}\| \qquad \text{(Cauchy-Schwarz)}$$
$$= (\|\vec{u}\| + \|\vec{v}\|)^2$$

$\square$

Corollary 17.0.6.1. *The absolute value function $|\ |$ is a norm on K.*

Proposition 17.0.7. *The function $\|\vec{x}\| = |x_1| + \cdots + |x_n|$ is a norm on $\mathbb{C}^n$.*

PROOF:
$\langle 1 \rangle 1$. If $\|\vec{x}\| = 0$ then $\vec{x} = \vec{0}$
  PROOF: If $|x_1| + \cdots + |x_n| = 0$ then $x_1 = \cdots = x_n = 0$.
$\langle 1 \rangle 2$. $\|\lambda \vec{x}\| = |\lambda| \|\vec{x}\|$

PROOF:
$$\|\lambda\vec{x}\| |\lambda x_1| + \cdots + |\lambda x_n|$$

$$= |\lambda|(|x_1| + \cdots + |x_n|)$$
$$= |\lambda| \|\vec{x}\|$$

$\langle 1\rangle 3.$ $\|\vec{u} + \vec{v}\| \le \|\vec{u}\| + \|\vec{v}\|$

PROOF:
$$\|\vec{u} + \vec{v}\|^2 = |u_1 + v_1| + \cdots + |u_n + v_n|$$
$$\le |u_1| + |v_1| + \cdots + |u_n| + |v_n|$$
$$= \|\vec{u}\| + \|\vec{v}\|$$

□

Proposition 17.0.8. *The function* $\|\vec{x}\| = \max(|x_1|, \ldots, |x_n|)$ *is a norm on* $\mathbb{C}^n$.

PROOF:
$\langle 1\rangle 1.$ If $\|\vec{x}\| = 0$ then $\vec{x} = \vec{0}$
  PROOF: If $\max(|x_1|, \ldots, |x|n|) = 0$ then $x_1 = \cdots = x_n = 0$.
$\langle 1\rangle 2.$ $\|\lambda\vec{x}\| = |\lambda| \|\vec{x}\|$
  PROOF:
$$\|\lambda\vec{x}\| = \max(|\lambda x_1|, \ldots, |\lambda x_n|)$$
$$= |\lambda| \max(|x_1|, \ldots, |x_n|)$$
$$= |\lambda| \|\vec{x}\|$$
$\langle 1\rangle 3.$ $\|\vec{u} + \vec{v}\| \le \|\vec{u}\| + \|\vec{v}\|$
  PROOF:
$$\|\vec{u} + \vec{v}\| = \max(|u_1 + v_1|, \ldots, |u_n + v_n|)$$
$$\le \max(|u_1| + |v_1|, \ldots, |u_n| + |v_n|)$$
$$\le \max(|u_1|, \ldots, |u_n|) + \max(|v_1|, \ldots, |v_n|)$$

□

Definition 17.0.9 (Uniform Convergence Norm). Let Ω be a closed bounded subset of $\mathbb{R}^n$. The *uniform convergence norm* on $\mathcal{C}(\Omega)$ is the function defined by $\|f\| = \max_{x \in \Omega} |f(x)|$.

Proposition 17.0.10. *Let* Ω *be a closed bounded subset of* $\mathbb{R}^n$. *The uniform convergence norm is a norm on* $\mathcal{C}(\Omega)$.

PROOF:
$\langle 1\rangle 1.$ If $\|f\| = 0$ then $f = 0$
  PROOF: If $\max_x |f(x)| = 0$ then $f(x) = 0$ for all x.
$\langle 1\rangle 2.$ $\|\lambda f\| = |\lambda| \|f\|$
  PROOF:
$$\|\lambda f\| = \max_x |\lambda f(x)|$$
$$= |\lambda| \max_x |f(x)|$$
$$= |\lambda| \|f\|$$

$\langle 1 \rangle 3.$ $\|f + g\| \leq \|f\| + \|g\|$

  PROOF:
$$\|f + g\| = \max_x |f(x) + g(x)|$$
$$\leq \max_x (|f(x)| + |g(x)|)$$
$$\leq \max_x |f(x)| + \max_x |g(x)|$$
$$= \|f\| + \|g\|$$

□

Proposition 17.0.11. *Let $p \geq 1$. The function $\|(z_n)\| = \left(\sum_{n=1}^{\infty} |z_n|^p \right)^{1/p}$ is a norm on l^p.*

PROOF:

$\langle 1 \rangle 1.$ If $\|(z_n)\| = 0$ then $(z_n) = (0)$

  PROOF: If $\left(\sum_n |z_n|^p \right)^{1/p} = 0$ then $\sum_n |z_n|^p = 0$ so $|z_n|^p = 0$ for all n, and so $z_n = 0$ for all n.

$\langle 1 \rangle 2.$ $\|(\lambda z_n)\| = |\lambda| \|(z_n)\|$

  PROOF:
$$\|(\lambda z_n)\| = \left(\sum_n |\lambda z_n|^p \right)^{1/p}$$
$$= |\lambda| \left(\sum_n |z_n|^p \right)^{1/p}$$
$$= |\lambda| \, |(z_n)|$$

$\langle 1 \rangle 3.$ The triangle inequality holds.

PROOF: This is Minkowski's Inequality. □

Proposition 17.0.12. *Let V be a normed space and U a vector subspace of V. Then U is a normed space under the restriction of the norm to U.*

PROOF: Each axiom follows from the fact it holds in V. □

Proposition 17.0.13. *Let V be a normed space over K. Let x_1, …, x_n be linearly independent elements of V. Then there exists a real number $c > 0$ such that, for all $\alpha_1, \ldots, \alpha_n \in K$, we have*

$$\|\alpha_1 x_1 + \cdots + \alpha_n x_n\| \geq c(|\alpha_1| + \cdots + |\alpha_n|) \ .$$

PROOF:

$\langle 1 \rangle 1.$ Define $f : K^n \to \mathbb{R}$ by
$$f(\alpha_1, \ldots, \alpha_n) = \|\alpha_1 x_1 + \cdots + \alpha_n x_n\|$$

$\langle 1 \rangle 2.$ f is continuous.

  $\langle 2 \rangle 1.$ LET: $(\alpha_1, \ldots, \alpha_n) \in K^n$ and $\epsilon > 0$

  $\langle 2 \rangle 2.$ LET: $\delta = \epsilon / (\|x_1\| + \cdots + \|x_n\|)$

    PROOF: x_1, …, x_n are not all zero because they are linearly independent.

  $\langle 2 \rangle 3.$ LET: $(\beta_1, \ldots, \beta_n)$ with $|\alpha_i - \beta_i| < \delta$ for all i

$\langle 2 \rangle 4$. $\|(\alpha_1 x_1 + \cdots + \alpha_n x_n) - (\beta_1 x_1 + \beta_n x_n)\| < \epsilon$
  PROOF:
$$\|(\alpha_1 x_1 + \cdots + \alpha_n x_n) - (\beta_1 x_1 + \beta_n x_n)\|$$
$$\leq |\alpha_1 - \beta_1| \|x_1\| + \cdots + |\alpha_n - \beta_n| \|x_n\| \qquad \text{(Axioms 2 and 3)}$$
$$< \delta(\|x_1\| + \cdots + \|x_n\|) \qquad\qquad\qquad (\langle 2 \rangle 3)$$
$$= \epsilon \qquad\qquad\qquad\qquad\qquad\qquad\qquad (\langle 2 \rangle 2)$$
$\langle 1 \rangle 3$. PICK $(\beta_1, \ldots, \beta_n) \in \{(\beta_1, \ldots, \beta_n) \in K^n \mid |\beta_1| + \cdots + |\beta_n| = 1\}$ at which
  f attains its minimum.
  PROOF: Extreme Value Theorem.
$\langle 1 \rangle 4$. Let $c = f(\beta_1, \ldots, \beta_n)$
$\langle 1 \rangle 5$. $c > 0$
  PROOF: Linear independence.
$\langle 1 \rangle 6$. LET: $\alpha_1, \ldots, \alpha_n \in K$
$\langle 1 \rangle 7$. $\|\alpha_1 x_1 + \cdots + \alpha_n x_n\| \geq c(|\alpha_1| + \cdots + |\alpha_n|)$
  $\langle 2 \rangle 1$. ASSUME: w.l.o.g. $\alpha_1 \ldots, \alpha_n$ are not all zero.
  $\langle 2 \rangle 2$. LET: $\beta_i = \alpha_i/(|\alpha_1| + \cdots + |\alpha_n|)$ for $i = 1, \ldots, n$
  $\langle 2 \rangle 3$. $|\beta_1| + \cdots + |\beta_n| = 1$
  $\langle 2 \rangle 4$. $f(\beta_1, \ldots, \beta_n) \geq c$
  $\langle 2 \rangle 5$. Q.E.D.
    PROOF: Multiply both sides by $|\alpha_1| + \cdots + |\alpha_n|$.
$\square$

Proposition 17.0.14. *Let V be a normed space over K. Define $d : V^2 \to \mathbb{R}$ by $d(x, y) = \|x - y\|$. Then d is a metric on V.*

PROOF:
$\langle 1 \rangle 1$. For all $x, y \in V$ we have $d(x, y) \geq 0$
  PROOF: Proposition 17.0.3.
$\langle 1 \rangle 2$. For all $x, y \in V$ we have $d(x, y) = 0$ iff $x = y$
  $\langle 2 \rangle 1$. If $d(x, y) = 0$ then $x = y$
    PROOF: Axiom 1.
  $\langle 2 \rangle 2$. If $x = y$ then $d(x, y) = 0$
    PROOF: Proposition 17.0.2.
$\langle 1 \rangle 3$. $\forall x, y \in V. d(x, y) = d(y, x)$
  PROOF: By Axiom 2.
$\langle 1 \rangle 4$. $\forall x, y, z \in V. d(x, z) \leq d(x, y) + d(y, z)$
  PROOF: By Axiom 3.
$\square$

Henceforth we identify any normed space with this metric space.

17.1 Convergence

Proposition 17.1.1. *Let V be a normed space over K. Let (x_n) be a sequence in V and $l \in V$. Then $x_n \to l$ as $n \to \infty$ in V if and only if $\|x_n - l\| \to 0$ as $n \to \infty$ in $\mathbb{R}$.*

PROOF: Immediate from definitions. □

Proposition 17.1.2. *In a normed space, a sequence has at most one limit.*

PROOF:
$\langle 1 \rangle$1. LET: V be a vector space over K.
$\langle 1 \rangle$2. ASSUME: $x_n \to l$ and $x_n \to m$ as $n \to \infty$.
$\langle 1 \rangle$3. ASSUME: for a contradiction $l \neq m$
$\langle 1 \rangle$4. LET: $\epsilon = \|l - m\|/2$
$\langle 1 \rangle$5. PICK N such that $\forall n \geq N.\|x_n - l\| < \epsilon$ and $\forall n \geq N.\|x_n - m\| < \epsilon$
    PROOF: $\langle 1 \rangle$2, $\langle 1 \rangle$4
$\langle 1 \rangle$6. $\|l - m\| < \|l - m\|$
    PROOF:
$$\|l - m\| \leq \|x_N - l\| + \|x_N - m\| \qquad \text{(Triangle Inequality)}$$
$$< 2\epsilon \qquad\qquad (\langle 1 \rangle 5)$$
$$= \|l - m\| \qquad\qquad (\langle 1 \rangle 4$$
$\langle 1 \rangle$7. Q.E.D.
    PROOF: This is a contradiction.
□

Definition 17.1.3 (Bounded)**.** Let V be a normed space over K. A sequence (x_n) in V is *bounded* iff there exists B such that $\forall n \leq N.\|x_n\| < B$.

Proposition 17.1.4. *Every convergent sequence is bounded.*

PROOF:

&= \epsilon
\end{aligned}$$

□

Definition 17.1.7 (Uniform Convergence)**.** Let Ω be a closed bounded subset of $\mathbb{R}^n$. Let (f_n) be a sequence in $\mathcal{C}(\Omega)$ and $f \in \mathcal{C}(\Omega)$. Then (f_n) *converges uniformly* to f iff, for every $\epsilon > 0$, there exists N such that $\forall x \in \Omega.\forall n \geq N.|f_n(x) - f(x)| < \epsilon$.

Proposition 17.1.8. *Let Ω be a closed bounded subset of $\mathbb{R}^n$. Let (f_n) be a sequence in $\mathcal{C}(\Omega)$ and $f \in \mathcal{C}(\Omega)$. Then (f_n) converges uniformly to f iff f_n converges to f under the uniform convergence norm.*

PROOF:

(f_n) converges to f under the uniform convergence norm

$\Leftrightarrow \forall \epsilon > 0.\exists N.\forall n \geq N.\|f_n - f\| < \epsilon$

$\Leftrightarrow \forall \epsilon > 0.\exists N.\forall n \geq N.\forall x \in X.|f_n(x) - f(x)| < \epsilon$ □

Definition 17.1.9 (Pointwise Convergence)**.** Let (f_n) be a sequence in $\mathcal{C}([0,1])$ and $f \in \mathcal{C}([0,1])$. Then (f_n) *converges pointwise* to f iff, for all $t \in [0,1]$, we have $|f_n(t) - f(t)| \to 0$ as $n \to \infty$.

Proposition 17.1.10. *There is no norm n on $\mathcal{C}([0,1])$ such that, for every sequence (f_n) and function f in $\mathcal{C}([0,1])$, we have (f_n) converges pointwise to f if and only if (f_n) converges to f under n.*

PROOF:

⟨1⟩1. ASSUME: for a contradiction $\| \ \|$ is a norm on $\mathcal{C}([0,1])$ such that, for every sequence (f_n) and function f in $\mathcal{C}([0,1])$, we have (f_n) converges pointwise to f if and only if (f_n) converges to f under $\| \ \|$.

⟨1⟩2. For $n \in \mathbb{Z}_+$, define $g_n \in \mathcal{C}([0,1])$ by

$$g_n(t) = \begin{cases} 2^n t & \text{if } 0 \le t \le 2^{-n} \\ 2 - 2^n t & \text{if } 2^{-n} \le t \le 2^{1-n} \\ 0 & \text{if } 2^{1-n} \le t \le 1 \end{cases}$$

⟨1⟩3. For all n, $\|g_n\| \ne 0$

   PROOF: Axiom 1.

⟨1⟩4. For $n \in \mathbb{Z}_+$, define $f_n \in \mathcal{C}([0,1])$ by $f_n = g_n/\|g_n\|$

⟨1⟩5. For all n, $\|f_n\| = 1$

   PROOF: Axiom 2.

⟨1⟩6. (f_n) does not converge under $\| \ \|$

⟨1⟩7. (f_n) converges pointwise to 0.

⟨1⟩8. This is a contradiction.

☐

Definition 17.1.11 (Equivalence of Norms). Let $\| \ \|_1$ and $\| \ \|_2$ be two norms on the same vector space V. Then the norms are *equivalent* if and only if, for any sequence (x_n) in V and $l \in V$, we have that (x_n) converges to l under $\| \ \|_1$ if and only if (x_n) converges to l under $\| \ \|_2$.

Theorem 17.1.12. *Let $\| \ \|_1$ and $\| \ \|_2$ be two norms on the same vector space E over K. Then $\| \ \|_1$ and $\| \ \|_2$ are equivalent if and only if there exist positive real numbers α and β such that, for all $x \in E$,*

$$\alpha\|x\|_1 \le \|x\|_2 \le \beta\|x\|_1 \ .$$

PROOF:

⟨1⟩1. If $\| \ \|_1$ and $\| \ \|_2$ are equivalent then there exist positive real numbers α and β such that, for all $x \in E$, $\alpha\|x\|_1 \le \|x\|_2 \le \beta\|x\|_1$.

  ⟨2⟩1. ASSUME: $\| \ \|_1$ and $\| \ \|_2$ are equivalent.

  ⟨2⟩2. There exists $\alpha > 0$ such that, for all $x \in E$, we have $\alpha\|x\|_1 \le \|x\|_2$

    ⟨3⟩1. ASSUME: for a contradiction there is no $\alpha > 0$ such that, for all $x \in E$, we have $\alpha\|x\|_1 \le \|x\|_2$.

    ⟨3⟩2. For all $n \in \mathbb{Z}_+$, PICK $x_n \in E$ such that $1/n\|x_n\|_1 > \|x\|_2$

    ⟨3⟩3. For all $n \in \mathbb{Z}_+$,

      LET:

$$y_n = \frac{1}{\sqrt{n}} \frac{x_n}{\|x_n\|_2}$$

    ⟨3⟩4. (y_n) converges to 0 under $\| \ \|_2$

    ⟨3⟩5. (y_n) converges to 0 under $\| \ \|_1$

    ⟨3⟩6. For all $n \in \mathbb{Z}_+$, we have $\|y_n\| > \sqrt{n}$

    ⟨3⟩7. This is a contradiction.

  ⟨2⟩3. There exists $\beta > 0$ such that, for all $x \in E$, we have $\|x\|_2 \le \beta\|x\|_1$

    PROOF: Similar.

$\langle 1 \rangle 2$. If there exist positive real numbers α and β such that, for all $x \in E$, $\alpha \|x\|_1 \leq \|x\|_2 \leq \beta \|x\|_1$. then $\| \ \|_1$ and $\| \ \|_2$ are equivalent.

$\quad \langle 2 \rangle 1$. ASSUME: α and β are positive reals with $\forall x \in E.\alpha \|x\|_1 \leq \|x\|_2 \leq \beta \|x\|_1$.

$\quad \langle 2 \rangle 2$. Let (x_n) be a sequence in E and $l \in E$

$\quad \langle 2 \rangle 3$. If (x_n) converges to l under $\| \ \|_1$ then (x_n) converges to l under $\| \ \|_2$.

$\qquad \langle 3 \rangle 1$. ASSUME: (x_n) converges to l under $\| \ \|_1$

$\qquad \langle 3 \rangle 2$. LET: $\epsilon > 0$

$\qquad \langle 3 \rangle 3$. PICK N such that $\forall n \geq N.\|x_n - l\|_1 < \epsilon/\beta$

$\qquad \langle 3 \rangle 4$. $\forall n \geq N.\|x_n - l\|_2 < \epsilon$

$\quad \langle 2 \rangle 4$. If (x_n) converges to l under $\| \ \|_2$ then (x_n) converges to l under $\| \ \|_1$.

$\quad$ PROOF: Similar.

$\Box$

Theorem 17.1.13. *Any two norms on a finite dimensional vector space are equivalent.*

PROOF:

$\langle 1 \rangle 1$. LET: V be a finite dimensional vector space over K.

$\langle 1 \rangle 2$. ASSUME: w.l.o.g. $\dim V > 0$

$\langle 1 \rangle 3$. PICK a basis $\{e_1, \ldots, e_n\}$ for V.

$\langle 1 \rangle 4$. LET: $\| \ \|_0 : V \to \mathbb{R}$ be the function: $\|\alpha_1 e_1 + \cdots + \alpha_n e_n\|_0 = |\alpha_1| + \cdots + |\alpha_n|$.

$\langle 1 \rangle 5$. $\| \ \|_0$ is a norm.

$\quad \langle 2 \rangle 1$. If $\|v\|_0 = 0$ then $v = 0$

$\quad$ PROOF: If $|\alpha_1| + \cdots + |\alpha_n| = 0$ then $\alpha_1 = \cdots = \alpha_n = 0$ so $\alpha_1 e_1 + \cdots + \alpha_n e_n = 0$.

$\quad \langle 2 \rangle 2$. $\|\lambda v\|_0 = |\lambda| \|v\|_0$

$\quad$ PROOF:

$$\begin{aligned}
\|\lambda(\alpha_1 e_1 + \cdots + \alpha_n e_n)\|_0 &= \|\lambda\alpha_1 e_1 + \cdots + \lambda\alpha_n e_n\|_0 \\
&= |\lambda\alpha_1| + \cdots + |\lambda\alpha_n| & (\langle 1 \rangle 4) \\
&= |\lambda|(|\alpha_1| + \cdots + |\alpha_n|) \\
&= |\lambda|\|\alpha_1 e_1 + \cdots + \alpha_n e_n\|_0 & (\langle 1 \rangle 4)
\end{aligned}$$

$\quad \langle 2 \rangle 3$. $\|u + v\|_0 \leq \|u\|_0 + \|v\|_0$

$\quad$ PROOF:

$$\begin{aligned}
\|(\alpha_1 e_1 + \cdots + \alpha_n e_n) + (\beta_1 e_1 + \cdots + \beta_n e_n)\| &= |\alpha_1 + \beta_1| + \cdots + |\alpha_n + \beta_n| \\
&\leq |\alpha_1| + \cdots + |\alpha_n| + |\beta_1| + \cdots + |\beta_n| \\
&= \|\alpha_1 e_1 + \cdots + \alpha_n e_n\|_0 + \|\beta_1 e_1 + \cdots + \beta_n e_n\|_0
\end{aligned}$$

$\langle 1 \rangle 6$. Any norm on V is equivalent to $\| \ \|_0$.

$\quad \langle 2 \rangle 1$. LET: $\| \ \|$ be any norm on V.

$\quad \langle 2 \rangle 2$. PICK $\alpha > 0$ such that, for all $\alpha_1, \ldots, \alpha_n \in K$, we have $\|\alpha_1 e_1 + \cdots + \alpha_n e_n\| \geq \alpha(|\alpha_1| + \cdots + |\alpha_n|)$

$\quad$ PROOF: Proposition 17.0.13, $\langle 2 \rangle 1$, $\langle 1 \rangle 3$.

$\quad \langle 2 \rangle 3$. LET: $\beta = \max(\|e_1\|, \ldots, \|e_n\|)$

$\quad \langle 2 \rangle 4$. $\beta > 0$

$\quad$ PROOF: $e_1, \ldots, e_n$ cannot all be zero by $\langle 1 \rangle 3$.

$\langle 2 \rangle 5$. For all $x \in V$ we have $\alpha \|x\|_0 \leq \|x\| \leq \beta \|x\|_0$

   $\langle 3 \rangle 1$. LET: $x \in V$

   $\langle 3 \rangle 2$. $\alpha \|x\|_0 \leq \|x\|$

Theorem 17.1.47. *Let V be a normed space over K. Let $S \subseteq V$. Then the following are equivalent.*

1. *S is dense.*

2. *For all $l \in V$, there exists a sequence (x_n) in S such that $x_n \to l$ as $n \to \infty$.*

3. *Every nonempty open subset of V intersects S.*

PROOF:
$\langle 1 \rangle 1.$ $1 \Leftrightarrow 2$
    PROOF: Theorem 17.1.43.
$\langle 1 \rangle 2.$ $1 \Rightarrow 3$
    $\langle 2 \rangle 1.$ ASSUME: S is dense.
    $\langle 2 \rangle 2.$ LET: U be a nonempty open subset of V.
    $\langle 2 \rangle 3.$ $X - U$ does not include S.

PROOF: Lest we have $\operatorname{cl} S \subseteq X - U$.

$\langle 2 \rangle 4$. U intersects S.

$\langle 1 \rangle 3$. $3 \Rightarrow 1$

$\quad \langle 2 \rangle 1$. ASSUME: Every nonempty subset of V intersects S.

$\quad \langle 2 \rangle 2$. Every closed proper subset of V does not include S.

$\quad \langle 2 \rangle 3$. $\operatorname{cl} S = V$

$\square$

Definition 17.1.48 (Compact)**.** Let V be a normed space over K and $S \subseteq V$. Then S is *compact* if and only if every sequence in S has a convergent subsequence whose limit is in S.

Proposition 17.1.49. *In K^n, a set is compact if and only if it is bounded and closed.*

PROOF: TODO

Definition 17.1.50 (Bounded)**.** Let V be a normed space over K and $S \subseteq V$. Then S is *bounded* iff there exists $r > 0$ such that $V \subseteq B(0, r)$.

Theorem 17.1.51. *Every compact set is closed and bounded.*

PROOF:

$\langle 1 \rangle 1$. LET: V be a normed space over K.

$\langle 1 \rangle 2$. LET: $S \subseteq V$ be compact.

$\langle 1 \rangle 3$. S is closed.

$\quad \langle 2 \rangle 1$. LET: (x_n) be a sequence in S that converges to l

$\quad \langle 2 \rangle 2$. PICK a sequence (x_{n_r}) that converges to $x \in S$

$\qquad$ PROOF: $\langle 1 \rangle 2$, $\langle 2 \rangle 1$

$\quad \langle 2 \rangle 3$. $x_{n_r} \to l$ as $n \to \infty$

$\qquad$ PROOF: $\langle 2 \rangle 1$, $\langle 2 \rangle 2$

$\quad \langle 2 \rangle 4$. $l = x$

$\qquad$ PROOF: Proposition 17.1.2.

$\quad \langle 2 \rangle 5$. $l \in S$

$\qquad$ PROOF: $\langle 2 \rangle 2$, $\langle 2 \rangle 4$

$\quad \langle 2 \rangle 6$. Q.E.D.

$\qquad$ PROOF: Theorem 17.1.40.

$\langle 1 \rangle 4$. S is bounded.

$\quad \langle 2 \rangle 1$. ASSUME: for a contradiction S is unbounded.

$\quad \langle 2 \rangle 2$. For $n \in \mathbb{Z}_+$, PICK $x_n \in S - B(0, n)$

$\quad \langle 2 \rangle 3$. PICK a convergent subsequence (x_{n_r}) that converges to l, say.

$\quad \langle 2 \rangle 4$. PICK $N \in \mathbb{Z}_+$ such that $\|l\| < N$

$\quad \langle 2 \rangle 5$. PICK r such that $n_r > N$ and $\|x_{n_r} - l\| < N - \|l\|$

$\quad \langle 2 \rangle 6$. $\|x_{n_r}\| < N < n_r$

$\quad \langle 2 \rangle 7$. This contradicts $\langle 2 \rangle 2$.

$\square$

Proposition 17.1.52. *In $\mathcal{C}([0, 1])$, the closed ball $\overline{B}(0, 1)$ is closed and bounded but not compact.*

PROOF: The sequence of functions (x^n) is in $\overline{B}(0,1)$ but has no convergent subsequence. □

Theorem 17.1.53 (Riesz's Lemma). *Let V be a normed vector space over K. Let X be a closed proper subspace of V. Let $0 < \epsilon < 1$. Then there exists $x \in V$ such that $\|x\| = 1$ and $\forall y \in X. \|x - y\| \geq \epsilon$.*

PROOF:
⟨1⟩1. PICK $z \in V - X$
⟨1⟩2. LET: $d = \inf_{x \in X} \|z - x\|$
⟨1⟩3. $d > 0$
   PROOF: Since X is closed, there exists $e > 0$ such that $B(z, d) \subseteq V - X$ and hence $\|z - x\| \geq d$ for all $x \in X$.
⟨1⟩4. PICK $x_0 \in X$ such that $d \leq \|z - x_0\| \leq d/\epsilon$
   PROOF: One exists since d/ϵ is not a lower bound for $\{\|z - x\| \mid x \in X\}$.

⟨1⟩5. $\alpha x + \beta y \in \text{cl}\, U$
☐

17.2   Continuous Linear Mappings

Definition 17.2.1 (Continuous)**.** Let U and V be normed spaces. Let $f : U \to V$ and $x \in U$. Then f is *continuous at x* iff, for any sequence (x_n) in U, if $x_n \to x$ as $n \to \infty$ then $f(x_n) \to f(x)$ as $n \to \infty$. The function f is *continuous* iff f is continuous at every point.

Proposition 17.2.2. *Let V be a normed space. Then the norm is a continuous function $V \to \mathbb{R}$.*

PROOF: From Proposition 17.0.4. ☐

Proposition 17.2.3. *Let U and V be normed space. Let $f : U \to V$. Then the following are equivalent.*

   1. f is continuous.

   2. For any open set S in V, we have $f^{-1}(S)$ is open in U.

3. *For any closed set C in V, we have $f^{-1}(C)$ is closed in U.*

Proposition 17.2.4. *Let U and V be normed spaces over K. Let $T : U \to V$ be a linear transformation. If T is continuous at some point, then it is continuous.*

PROOF:
$\langle 1 \rangle 1$. ASSUME: T is continuous at u_0
$\langle 1 \rangle 2$. LET: $x_n \to l$ as $n \to \infty$ in U
$\langle 1 \rangle 3$. $x_n - l + u_0 \to u_0$ as $n \to \infty$.
$\langle 1 \rangle 4$. $T(x_n - l + u_0) \to T(u_0)$ as $n \to \infty$.
$\langle 1 \rangle 5$. $T(x_n) - T(l) + T(u_0) \to T(u_0)$ as $n \to \infty$.
$\langle 1 \rangle 6$. $T(x_n) \to T(l)$ as $n \to \infty$.
☐

Definition 17.2.5 (Bounded)**.** Let U and V be normed spaces over K. Let $T : U \to V$ be a linear transformation. Then T is *bounded* iff there exists $\alpha > 0$ such that, for all $x \in U$, we have $\|T(x)\| \leq \alpha \|x\|$.

Theorem 17.2.6. *Let U and V be normed spaces over K. Let $T : U \to V$ be a linear transformation. Then T is continuous if and only if it is bounded.*

PROOF:
$\langle 1 \rangle 1$. If T is continuous then T is bounded.
　$\langle 2 \rangle 1$. ASSUME: T is not bounded.
　$\langle 2 \rangle 2$. For $n \in \mathbb{Z}_+$, PICK $x_n \in U$ such that $\|T(x_n)\| > n\|x_n\|$.
　$\langle 2 \rangle 3$. For $n \in \mathbb{Z}_+$,
　　LET:
$$y_n = \frac{x_n}{n\|x_n\|}$$
　$\langle 2 \rangle 4$. $y_n \to 0$ as $n \to \infty$
　$\langle 2 \rangle 5$. $T(y_n) \not\to 0$ as $n \to \infty$
　$\langle 2 \rangle 6$. T is not continuous.
$\langle 1 \rangle 2$. If T is bounded then T is continuous.
　$\langle 2 \rangle 1$. ASSUME: T is bounded.
　$\langle 2 \rangle 2$. PICK $\alpha > 0$ such that $\forall x \in U.\|T(x)\| \leq \alpha\|x\|$.
　$\langle 2 \rangle 3$. T is continuous at 0.
　　$\langle 3 \rangle 1$. LET: (x_n) be a sequence that converges to 0 in U
　　$\langle 3 \rangle 2$. $T(x_n) \to 0$ as $n \to \infty$
　　　PROOF:
$$\|T(x_n)\| \leq \alpha\|x_n\| \qquad\qquad (\langle 2 \rangle 2)$$
$$\to 0 \qquad\qquad \text{as } n \to \infty$$
　$\langle 2 \rangle 4$. T is continuous.
　　PROOF: Proposition 17.2.4.
☐

Proposition 17.2.7. *Let U and V be normed spaces over K where U is finite dimensional. Let $T : U \to V$ be a linear transformation. Then T is bounded.*

PROOF:

17.3   Banach Spaces

Definition 17.3.1 (Cauchy Sequence). Let V be a normed space over K. A *Cauchy sequence* is a sequence of points (x_n) such that, for every $\epsilon > 0$, there exists N such that $\forall m, n \geq N.\|x_m - x_n\| < \epsilon$.

Theorem 17.3.2. *Let V be a normed space over K. Let (x_n) be a sequence in V. The following are equivalent.*

1. *(x_n) is Cauchy.*

2. *For every pair of increasing sequences of positive integers (p_n) and (q_n), we have $\|x_{p_n} - x_{q_n}\| \to 0$ as $n \to \infty$.*

3. *For every increasing sequence of positive integers (p_n), we have $\|x_{p_n} - x_n\| \to 0$ as $n \to \infty$.*

PROOF:
⟨1⟩1. $1 \Rightarrow 2$
   ⟨2⟩1. ASSUME: (x_n) is Cauchy.
   ⟨2⟩2. LET: (p_n) and (q_n) are increasing sequences of positive integers.
   ⟨2⟩3. LET: $\epsilon > 0$
   ⟨2⟩4. PICK N such that $\forall m, n \geq N.\|x_m - x_n\| < \epsilon$
   ⟨2⟩5. $\forall n \geq N.\|x_{p_n} - x_{q_n}\| < \epsilon$
     PROOF: Since $p_n, q_n \geq n \geq N$.
⟨1⟩2. $2 \Rightarrow 3$
   PROOF: Trivial.
⟨1⟩3. $2 \Rightarrow 1$
   ⟨2⟩1. ASSUME: (x_n) is not Cauchy
   ⟨2⟩2. Pick $\epsilon > 0$ such that, for every $N \in \mathbb{Z}_+$, there exist $m_N, n_N \geq N$ such that $\|x_{m_N} - x_{n_N}\| \geq \epsilon$
   ⟨2⟩3. ASSUME: w.l.o.g. (m_N) and (n_N) are increasing sequences.
   ⟨2⟩4. $\|x_{m_N} - x_{n_N}\| \not\to 0$ as $N \to \infty$.
⟨1⟩4. $3 \Rightarrow 2$
   ⟨2⟩1. ASSUME: 3
   ⟨2⟩2. LET: (p_n) and (q_n) be increasing sequences of positive integers.
   ⟨2⟩3. LET: $\epsilon > 0$
   ⟨2⟩4. PICK N such that $\forall n \geq N.\|x_{p_n} - x_n\| < \epsilon/2$ and $\forall n \geq N.\|x_{q_n} - x_n\| < \epsilon/2$
   ⟨2⟩5. $\forall n \geq N.\|x_{p_n} - x_{q_n}\| < \epsilon$
☐

Proposition 17.3.3. *Every convergent sequence is Cauchy.*

PROOF:
⟨1⟩1. LET: $x_n \to l$ as $n \to \infty$.
⟨1⟩2. LET: $\epsilon > 0$
⟨1⟩3. PICK N such that $\forall n \geq N.\|x_n - l\| < \epsilon/2$

$\langle 1 \rangle 4$. For all $m, n \geq N$ we have $\|x_m - x_n\| < \epsilon$.
□

Proposition 17.3.4. *In* $\mathcal{P}([0, 1])$*, let*

$$P_n(x) = 1 + x + \frac{x^2}{2} + \cdots + \frac{x^n}{n!} \ .$$

Then (P_n) *is Cauchy but does not converge.*

PROOF: It converges to e^x in $\mathcal{C}([0, 1])$, therefore it is Cauchy in $\mathcal{C}([0, 1])$, hence Cauchy in $\mathcal{P}([0, 1])$. Since $e^x \notin \mathcal{P}([0, 1])$, it does not converge in that space. □

Proposition 17.3.5. *Let* V *be a normed space over* K*. Let* (x_n) *be a Cauchy sequence in* V*. Then* $(\|x_n\|)$ *converges in* $\mathbb{R}$*.*

PROOF:
$\langle 1 \rangle 1$. $(\|x_n\|)$ is Cauchy.
  $\langle 2 \rangle 1$. LET: $\epsilon > 0$
  $\langle 2 \rangle 2$. PICK N such that $\forall m, n \geq N.\|x_m - x_n\| < \epsilon$
  $\langle 2 \rangle 3$. $\forall m, n \geq N.|\|x_m\| - \|x_n\|| < \epsilon$
    PROOF: Proposition 17.0.4.
$\langle 1 \rangle 2$. Q.E.D.
  PROOF: Since every Cauchy sequence in $\mathbb{R}$ converges.
□

Proposition 17.3.6. *Every Cauchy sequence is bounded.*

PROOF:
$\langle 1 \rangle 1$. LET: V be a normed space over K.
$\langle 1 \rangle 2$. LET: (x_n) be a Cauchy sequence in V.
$\langle 1 \rangle 3$. PICK N such that $\forall m, n \geq N.\|x_m - x_n\| < 1$.
$\langle 1 \rangle 4$. LET: $B = \max(\|x_1\|, \ldots, \|x_{N-1}\|, \|x_N\| + 1$
$\langle 1 \rangle 5$. $\forall n.\|x_n\| \leq B$
□

Definition 17.3.7 (Banach Space)**.** A normed space V over K is *complete* or a *Banach space* iff every Cauchy sequence converges.

Proposition 17.3.8. l^2 *is complete.*

PROOF:
$\langle 1 \rangle 1$. LET: (a_n) be a Cauchy sequence in l^2 where $a_n = (\alpha_{n1}, \alpha_{n2}, \ldots)$.
$\langle 1 \rangle 2$. For all $\epsilon > 0$, there exists $n_0 \in \mathbb{Z}_+$ such that $\forall m, n \geq n_0. \sum_{k=1}^{\infty} |\alpha_{mk} - \alpha_{nk}|^2 < \epsilon^2$.
$\langle 1 \rangle 3$. For every $k \in \mathbb{Z}_+$ and $\epsilon > 0$, there exists $n_0 \in \mathbb{Z}_+$ such that $\forall m, n \geq n_0. |\alpha_{mk} - \alpha_{nk}| < \epsilon$.
$\langle 1 \rangle 4$. For every $k \in \mathbb{Z}_+$, (α_{nk}) is Cauchy in $\mathbb{C}$.
$\langle 1 \rangle 5$. For every $k \in \mathbb{Z}_+$, (α_{nk}) converges in $\mathbb{C}$.
$\langle 1 \rangle 6$. For $k \in \mathbb{Z}_+$,

LET: $\alpha_k = \lim_{n \to \infty} \alpha_{nk}$

$\langle 1 \rangle 7$. Let a be the sequence (α_k)

$\langle 1 \rangle 8$. For all $\epsilon > 0$, there exists n_0 such that $\forall n \geq n_0. \sum_{k=1}^{\infty} |\alpha_k - \alpha_{nk}|^2 \leq \epsilon^2$.
PROOF: Letting $m \to \infty$ in $\langle 1 \rangle 2$.

$\langle 1 \rangle 9$. $a \in l^2$

  $\langle 2 \rangle 1$. PICK n_0 such that $\forall n \geq n_0. \sum_{k=1}^{\infty} |\alpha_k - \alpha_{nk}|^2 \leq 1$
    PROOF: $\langle 1 \rangle 8$

  $\langle 2 \rangle 2$. $(\alpha_k - \alpha_{n_0 k}) \in l^2$

  $\langle 2 \rangle 3$. $(\alpha_{n_0 k}) \in l^2$
    PROOF: By $\langle 1 \rangle 1$ since the sequence is a_{n_0}.

  $\langle 2 \rangle 4$. $(\alpha_k) \in l^2$
    PROOF: Proposition 15.0.2.

$\langle 1 \rangle 10$. $a_n \to a$ as $n \to \infty$
  PROOF: By $\langle 1 \rangle 8$ since $\|a - a_n\| = \sqrt{\sum_{k=1}^{\infty} |\alpha_k - \alpha_{nk}|^2}$.

$\square$

Proposition 17.3.9. *Let a and b be real numbers with $a < b$. The space $\mathcal{C}([a, b])$ is complete.*

PROOF:

$\langle 1 \rangle 1$. LET: $X = [a, b]$

$\langle 1 \rangle 2$. LET: (f_n) be a Cauchy sequence in $\mathcal{C}([a, b])$.

$\langle 1 \rangle 3$. For all $\epsilon > 0$, there exists n_0 such that $\forall n, m \geq n_0. \|f_n - f_m\| < \epsilon$.

$\langle 1 \rangle 4$. For all $\epsilon > 0$, there exists n_0 such that $\forall n, m \geq n_0. \forall x \in X. |f_n(x) - f_m(x)| < \epsilon$.

$\langle 1 \rangle 5$. For all $x \in [a, b]$, $(f_n(x))$ is Cauchy.

$\langle 1 \rangle 6$. Define $f : [a, b] \to \mathbb{C}$ by $f(x) = \lim_{n \to \infty} f_n(x)$.

$\langle 1 \rangle 7$. For all $\epsilon > 0$, there exists n_0 such that $\forall n \geq n_0. \forall x \in X. |f_n(x) - f(x)| < \epsilon$
  PROOF: Letting $m \to \infty$ in $\langle 1 \rangle 4$.

$\langle 1 \rangle 8$. f is continuous

  $\langle 2 \rangle 1$. LET: $x_0 \in X$

  $\langle 2 \rangle 2$. LET: $\epsilon > 0$

  $\langle 2 \rangle 3$. PICK n_0 such that $\forall n \geq n_0. \forall x \in X. |f_n(x) - f(x)| < \epsilon/3$
    PROOF: By $\langle 1 \rangle 7$.

  $\langle 2 \rangle 4$. PICK $\delta > 0$ such that $\forall x \in X. |x - x_0| < \delta \Rightarrow |f_{n_0}(x) - f_{n_0}(x_0)| < \epsilon/3$
    PROOF: Since f_{n_0} is continuous.

  $\langle 2 \rangle 5$. LET: $x \in X$

  $\langle 2 \rangle 6$. ASSUME: $|x - x_0| < \delta$

  $\langle 2 \rangle 7$. $|f(x) - f(x_0)| < \epsilon$
    PROOF:
    $$|f(x) - f(x_0)| \leq |f(x) - f_{n_0}(x)| + |f_{n_0}(x) - f_{n_0}(x_0)| + |f_{n_0}(x_0) - f(x_0)| \quad \text{(Triangle Inequality)}$$
    $$< \epsilon/3 + \epsilon/3 + \epsilon/3 \quad\quad (\langle 2 \rangle 3, \langle 2 \rangle 4)$$
    $$= \epsilon$$

$\langle 1 \rangle 9$. (f_n) converges to f uniformly.
  PROOF: From $\langle 1 \rangle 7$

$\square$

Definition 17.3.10 (Series)**.** Let V be a normed space over K. A *convergent series* in V is a sequence (x_n) in V such that $(x_1 + \cdots + x_n)$ is a convergent sequence, in which case we write $\sum_{n=1}^{\infty} x_n$ for its limit.

Definition 17.3.11 (Absolutely Convergent Series)**.** Let V be a normed space over K. An *absolutely convergent series* in V is a sequence (x_n) such that $\sum_{n=1}^{\infty} \|x_n\| < \infty$.

Proposition 17.3.12. *In $\mathcal{P}([0,1])$, the series $\sum_{n=0}^{\infty} x^n/n!$ is absolutely convergent but not convergent.*

PROOF: Proposition 17.3.4. $\square$

Theorem 17.3.13. *A normed space is complete if and only if every absolutely convergent series is convergent.*

PROOF:
⟨1⟩1. LET: V be a normed space over K.
⟨1⟩2. If V is complete then every absolutely convergent series is convergent.
  ⟨2⟩1. ASSUME: V is complete.
  ⟨2⟩2. LET: $\sum_{n=1}^{\infty} a_n$ be absolutely convergent in V.
  ⟨2⟩3. For $n \in \mathbb{Z}_+$,
     LET: $s_n = \sum_{k=1}^{n} a_k$
     .
  ⟨2⟩4. (s_n) is Cauchy.
    ⟨3⟩1. LET: $\epsilon > 0$
    ⟨3⟩2. PICK k such that $\sum_{n=k+1}^{\infty} \|a_n\| < \epsilon$
    ⟨3⟩3. LET: $m > n > k$
    ⟨3⟩4. $\|s_m - s_n\| < \epsilon$
      PROOF:

$$\|s_m - s_n\| = \left\| \sum_{i=n+1}^{m} a_i \right\| \qquad (\langle 2 \rangle 3, \langle 3 \rangle 3)$$

$$\leq \sum_{i=s+1}^{m} \|a_i\| \qquad \text{(Triangle inequality)}$$

$$\leq \sum_{i=k+1}^{\infty} \|a_i\|$$

$$< \epsilon \qquad (\langle 3 \rangle 2, \langle 3 \rangle 3)$$

  ⟨2⟩5. (s_n) converges.
⟨1⟩3. If every absolutely convergent series is convergent then V is complete.
  ⟨2⟩1. ASSUME: Every absolutely convergent series in V is convergent.
  ⟨2⟩2. LET: (a_n) be a Cauchy sequence in V.
  ⟨2⟩3. PICK a strictly increasing sequence of positive integers (p_n) such that
     $\forall k. \forall m, n \geq p_k. \|x_m - x_n\| < 2^{-k}$.
  ⟨2⟩4. $\sum_{k=1}^{\infty} (x_{p_{k+1}} - x_{p_k})$ is absolutely convergent.

PROOF:

$$\sum_{k=1}^{\infty} \|x_{p_{k+1}} - x_{p_k}\| < \sum_{k=1}^{\infty} 2^{-k} \qquad (\langle 2 \rangle 3)$$

$$< \infty$$

$\langle 2 \rangle 5.$ $\sum_{k=1}^{\infty}(x_{p_{k+1}} - x_{p_k})$ is convergent.
  PROOF: $\langle 2 \rangle 1$, $\langle 2 \rangle 5$
$\langle 2 \rangle 6.$ LET: $s = \sum_{k=1}^{\infty}(x_{p_{k+1}} - x_{p_k})$
$\langle 2 \rangle 7.$ $x_{p_k} \to s + x_{p_1}$ as $k \to \infty$.

  PROOF: Theorem 17.1.40.
$\langle 1 \rangle 7.$ $a_n \to l$ as $n \to \infty$ in U.
☐

Definition 17.3.15 (Completion)**.** Let V be a normed space over K. A *completion* of V consists of a normed space W over K and an injection $\phi : V \to W$ such that:

1. $\forall x, y \in V. \forall \alpha, \beta \in K. \phi(\alpha x + \beta y) = \alpha \phi(x) + \beta \phi(y)$

2. $\forall x \in V. \|\phi(x)\| = \|x\|$

3. $\phi(V)$ is dense in W.

4. W is complete.

Proposition 17.3.16. *Every normed space has a completion.*

PROOF:

$\langle 1 \rangle 1$. LET: V be a normed space over K.

$\langle 1 \rangle 2$. Let us say two Cauchy sequences (x_n), (y_n) ore *equivalent* iff $x_n - y_n \to 0$ as $n \to \infty$.

$\langle 1 \rangle 3$. Equivalence is an equivalence relation on the set of Cauchy sequences.

$\langle 1 \rangle 4$. LET: W be the set of Cauchy sequences in V quotiented by equivalence.

$\langle 1 \rangle 5$. Define addition and multiplication on W by
$$[(x_n)] + [(y_n)] = [(x_n + y_n)]$$
$$\lambda[(x_n)] = [(\lambda x_n)]$$

$\langle 1 \rangle 6$. Define a norm on W by $\|[(x_n)]\| = \lim_{n \to \infty} \|x_n\|$

$\langle 1 \rangle 7$. Define $\phi : V \to W$ by $\phi(v) = [(v)]$.

$\langle 1 \rangle 8$. ϕ is injective.

$\langle 1 \rangle 9$. $\forall x, y \in V. \forall \alpha, \beta \in K. \phi(\alpha x + \beta y) = \alpha \phi(x) + \beta \phi(y)$

$\langle 1 \rangle 10$. $\forall x \in V. \|\phi(x)\| = \|x\|$

$\langle 1 \rangle 11$. $\phi(V)$ is dense in W.

  $\langle 2 \rangle 1$. LET: $[(a_n)] \in W$ and $\epsilon > 0$.
        PROVE: $B([(a_n)], \epsilon)$ intersects $\phi(V)$.

  $\langle 2 \rangle 2$. PICK N such that $\forall m, n \geq N. \|a_m - a_n\| < \epsilon/2$

  $\langle 2 \rangle 3$. $\phi(a_N) \in B([(a_n)], \epsilon)$
     PROOF:
$$\|[(a_n)] - \phi(a_N)\| = \lim_{n \to \infty} \|a_n - a_N\|$$
$$\leq \epsilon/2 \qquad\qquad (\langle 2 \rangle 2)$$
$$< \epsilon$$

$\langle 1 \rangle 12$. W is complete.

  $\langle 2 \rangle 1$. LET: (X_n) be a Cauchy sequence in W.

  $\langle 2 \rangle 2$. For $n \in \mathbb{Z}_+$, PICK $x_n \in V$ such that
$$\|\phi(x_n) - X_n\| < 1/n \ .$$

  $\langle 2 \rangle 3$. (x_n) is Cauchy in V.

    $\langle 3 \rangle 1$. LET: $\epsilon > 0$

Corollary 17.3.18.1. *Let U be a normed space and V a Banach space. Let W be a dense subspace of U. Let $T : W \to V$ be a continuous linear transformation. Then T has a unique extension to a continuous linear transformation $U \to V$.*

Definition 17.3.19 (Functional). Let V be a normed space over K. A *functional* on V is a bounded linear mapping $V \to K$. The *dual space* of V is the space $\mathcal{B}(V, K)$ of all functionals.

Theorem 17.3.20 (Banach-Steinhaus Theorem). *Let $\mathcal{T}$ be a family of bounded linear mappings from a Banach space X into a normed space Y. If, for every $x \in X$, there exists a constant M_x such that $\forall T \in \mathcal{T} . \|T(x)\| \le M_x$, then there exists a constant $M > 0$ such that $\forall T \in \mathcal{T} . \|T\| \le M$.*

PROOF:
$\langle 1 \rangle$1. ASSUME: for a contradiction no such M exists.
$\langle 1 \rangle$2. For $n \in \mathbb{Z}_+$, PICK $T_n \in \mathcal{T}$ such that $\|T_n\| > n2^n$.
$\langle 1 \rangle$3. For $n \in \mathbb{Z}_+$, PICK $x_n \in X$ such that $\|x_n\| = 1$ and $\|T_n(x_n)\| > n2^n$.
$\langle 1 \rangle$4. For $n \in \mathbb{Z}_+$,

$$\left\| \frac{1}{n} T_n \left(\frac{x_n}{2^n} \right) \right\| > 1 \ .$$

$\langle 1 \rangle$5. For $i, j \in \mathbb{Z}_+$,
    LET: $y_{ij} = \frac{1}{i} T_i(\frac{x_j}{2^j})$.
$\langle 1 \rangle$6. For all $j \in \mathbb{Z}_+$, $y_{ij} \to 0$ as $i \to \infty$
$\langle 2 \rangle$1. LET: $j \in \mathbb{Z}_+$
$\langle 2 \rangle$2. PICK M such that $\forall T \in \mathcal{T} . \|T(x_j / 2^j)\| \le M$
$\langle 2 \rangle$3. For all i, $\|y_{ij}\| \le M/i$
$\langle 1 \rangle$7. For any increasing sequence of positive integers (p_i), we have $\sum_{j=1}^{\infty} y_{p_i p_j} \to 0$ as $i \to \infty$
$\langle 2 \rangle$1. LET: (p_i) be an increasing sequence of positive integers.
$\langle 2 \rangle$2. LET: $z = \sum_{j=1}^{\infty} x_{p_j} / 2^{p_j}$
    PROOF: This converges by Theorem 17.3.13.
$\langle 2 \rangle$3. PICK C such that $\forall T \in \mathcal{T} . \|T(z)\| \le C$
$\langle 2 \rangle$4. For all i, $\| \sum_{j=1}^{\infty} y_{p_i p_j} \| \le C/p_i$.

PROOF:

$$\left\| \sum_{j=1}^{\infty} y_{p_i p_j} \right\| = \left\| \sum_{j=1}^{\infty} \frac{1}{p_i} T_{p_i} \left(\frac{x_{p_j}}{2^{p_j}} \right) \right\| \qquad (\langle 1 \rangle 5)$$

$$= \frac{1}{p_i} \left\| T_{p_i} \left(\sum_{j=1}^{\infty} \frac{x_{p_j}}{2^{p_j}} \right) \right\| \qquad (T_{p_i} \text{ continuous})$$

$$= \frac{1}{p_i} \| T_{p_i}(z) \| \qquad (\langle 2 \rangle 2)$$

$$\leq \frac{C}{p_i} \qquad (\langle 2 \rangle 3)$$

$\langle 2 \rangle 5$. $\sum_{j=1}^{\infty} y_{p_i p_j} \to 0$ as $i \to \infty$
$\langle 1 \rangle 8$. $y_{ii} \to 0$ as $i \to \infty$
  PROOF: Diagonal Theorem, $\langle 1 \rangle 6$, $\langle 1 \rangle 7$.
$\langle 1 \rangle 9$. Q.E.D.
  PROOF: $\langle 1 \rangle 4$ and $\langle 1 \rangle 8$ form a contradiction.
□

17.4   Contraction Mappings

Definition 17.4.1 (Contraction Mapping)**.** Let E be a normed space over K. Let $A \subseteq E$. A function $f : A \to E$ is a *contraction (mapping)* iff there exists a real α such that $0 < \alpha < 1$ and

$$\forall x, y \in A. \| f(x) - f(y) \| \leq \alpha \| x - y \| \ .$$

Proposition 17.4.2. *Contraction mappings are uniformly continuous.*

PROOF:
$\langle 1 \rangle 1$. LET: E be a normed space over K.
$\langle 1 \rangle 2$. LET: $A \subseteq E$
$\langle 1 \rangle 3$. LET: $f : A \to E$ be a contraction mapping.
$\langle 1 \rangle 4$. PICK α such that $0 < \alpha < 1$ and $\forall x, y \in A. \| f(x) - f(y) \| \leq \alpha \| x - y \|$.
$\langle 1 \rangle 5$. LET: $\epsilon > 0$
$\langle 1 \rangle 6$. LET: $\delta = \epsilon / \alpha$
$\langle 1 \rangle 7$. For all $x, y \in A$, if $\| x - y \| < \delta$ then $\| f(x) - f(y) \| < \epsilon$.
□

Theorem 17.4.3 (Banach Fixed Point Theorem)**.** *Let E be a Banach space over K. Let F be a nonempty closed subset of E. Let $f : F \to F$ be a contraction mapping. Then there exists a unique $z \in F$ such that $f(z) = z$.*

PROOF:
$\langle 1 \rangle 1$. PICK α such that $0 < \alpha < 1$ and
$$\forall x, y \in F. \| f(x) - f(y) \| \leq \alpha \| x - y \| \ .$$
$\langle 1 \rangle 2$. PICK $x_0 \in F$

$\langle 1 \rangle 3$. For $n \in \mathbb{Z}_+$,
    LET: $x_n = f^n(x_0)$.
$\langle 1 \rangle 4$. (x_n) is a Cauchy sequence.
  $\langle 2 \rangle 1$. For all $n \in \mathbb{Z}_+$ we have $\|x_{n+1} - x_n\| \leq \alpha^n \|x_1 - x_0\|$.
  $\langle 2 \rangle 2$. For all $m, n \in \mathbb{Z}_+$ with $m < n$ we have $\|x_n - x_m\| < \alpha^m \|x_1 - x_0\|/(1-\alpha)$.
  PROOF:

$$\|x_n - x_m\| \leq \|x_n - x_{n-1}\| + \|x_{n-1} - x_{n-2}\| + \cdots + \|x_{m+1} - x_m\| \quad \text{(Triangle inequality)}$$
$$\leq (\alpha^{n-1} + \alpha^{n-2} + \cdots + \alpha^m)\|x_1 - x_0\| \qquad\qquad (\langle 2 \rangle 1)$$
$$< \frac{\|x_1 - x_0\|}{1 - \alpha}\alpha^m$$

  $\langle 2 \rangle 3$. LET: $\epsilon > 0$
  $\langle 2 \rangle 4$. PICK N such that $\alpha^N \|x_1 - x_0\|/(1 - \alpha) < \epsilon$
  $\langle 2 \rangle 5$. For all $m, n \geq N$, we have $\|x_n - x_m\| < \epsilon$
$\langle 1 \rangle 5$. LET: $z = \lim_{n \to \infty} x_n$
$\langle 1 \rangle 6$. $f(z) = z$
  PROOF:

$$f(z) = f\left(\lim_{n \to \infty} x_n\right)$$
$$= \lim_{n \to \infty} f(x_n) \qquad\qquad \text{(Proposition 17.4.2)}$$
$$= \lim_{n \to \infty} x_{n+1}$$
$$= z$$

$\langle 1 \rangle 7$. For any $w \in F$, if $f(w) = w$ then $w = z$.
  $\langle 2 \rangle 1$. LET: $w \in F$
  $\langle 2 \rangle 2$. ASSUME: $f(w) = w$
  $\langle 2 \rangle 3$. $\|z - w\| \leq \alpha \|z - w\|$
    PROOF: $\|z - w\| = \|f(z) - f(w)\| \leq \alpha \|z - w\|$
  $\langle 2 \rangle 4$. $\|z - w\| = 0$
  $\langle 2 \rangle 5$. $z = w$
$\square$

Chapter 18

Inner Product Spaces

Definition 18.0.1 (Inner Product Space)**.** Let E be a complex vector space. An *inner product* on E is a function $\langle \ , \ \rangle : E^2 \to \mathbb{C}$ such that, for all $x, y, z \in E$ and $\alpha, \beta \in \mathbb{C}$, we have:

1. $\langle x, y \rangle = \overline{\langle y, x \rangle}$

2. $\langle \alpha x + \beta y, z \rangle = \alpha \langle x, z \rangle + \beta \langle y, z \rangle$

3. $\langle x, x \rangle \geq 0$

4. If $\langle x, x \rangle = 0$ then $x = 0$

An *inner product space* consists of a complex vector space V and an inner product on V.

Proposition 18.0.2. *Let E be an inner product space. For any $x \in E$, we have $\langle x, x \rangle$ is real.*

PROOF: Since $\langle x, x \rangle = \overline{\langle x, x \rangle}$. $\square$

Proposition 18.0.3.

$$\langle x, \alpha y + \beta z \rangle = \overline{\alpha} \langle x, y \rangle + \overline{\beta} \langle x, z \rangle$$

Proposition 18.0.4.

$$\langle 0, y \rangle = \langle x, 0 \rangle = 0$$

Proposition 18.0.5. *The function $\langle \vec{x}, \vec{y} \rangle = \sum_{i=1}^{n} x_i \overline{y_i}$ is an inner product on $\mathbb{C}^n$.*

Proposition 18.0.6. *The function $\langle (x_n), (y_n) \rangle = \sum_{i=1}^{\infty} x_i \overline{y_i}$ is an inner product on l^2.*

Proposition 18.0.7. *The function $\langle f, g \rangle = \int_a^b f(x) \overline{g(x)} dx$ is an inner product on $\mathcal{C}([a, b])$.*

Proposition 18.0.8. *Let $p > 1$ and $\Omega \subseteq \mathbb{R}^N$. Let $L^p(\Omega)$ be the set of all functions $f : \Omega \to \mathbb{C}$ such that $|f|^p$ is Lebesgue integrable.*

The function $\langle f, g \rangle = \int_\Omega f(x)\overline{g(x)}dx$ is an inner product on $L^2(\Omega)$.

Proposition 18.0.9. *Let E_1 and E_2 be inner product spaces. Then the function $\langle (e_1, e_2), (e_1', e_2') \rangle = \langle e_1, e_1' \rangle + \langle e_2, e_2' \rangle$ is an inner product on $E_1 \times E_2$.*

Definition 18.0.10 (Norm)**.** In an inner product space, define $\|x\| = \sqrt{\langle x, x \rangle}$.

Proposition 18.0.11 (Schwarz's Inequality)**.** *In any inner product space,*

$$|\langle x, y \rangle| \leq \|x\|\|y\| \ .$$

Equality holds iff x and y are linearly dependent.

Proof:
$\langle 1 \rangle 1$. Assume: w.l.o.g. $y \neq 0$
$\langle 1 \rangle 2$. $|\langle x, y \rangle| \leq \|x\|\|y\|$
   $\langle 2 \rangle 1$. For all $\alpha \in \mathbb{C}$ we have $\langle x, x \rangle + \overline{\alpha}\langle x, y \rangle + \alpha\langle y, x \rangle + |\alpha|^2 \langle y, y \rangle$
     Proof: The right-hand side is $\langle x + \alpha y, x + \alpha y \rangle$.
   $\langle 2 \rangle 2$. $\langle x, x \rangle\langle y, y \rangle - |\langle x, y \rangle|^2 \geq 0$
     Proof: Taking $\alpha = -\langle x, x \rangle / \langle y, y \rangle$ in $\langle 2 \rangle 1$.
$\langle 1 \rangle 3$. If $|\langle x, y \rangle| = \|x\|\|y\|$ then x and y are linearly dependent.
   $\langle 2 \rangle 1$. Assume: $|\langle x, y \rangle| = \|x\|\|y\|$
   $\langle 2 \rangle 2$. $\langle x, y \rangle\langle y, x \rangle = \langle x, x \rangle\langle y, y \rangle$
   $\langle 2 \rangle 3$. $\langle y, y \rangle x - \langle x, x \rangle y = 0$
     Proof:
$$\langle \langle y, y \rangle x - \langle x, y \rangle y, \langle y, y \rangle x - \langle x, y \rangle y \rangle = \langle y, y \rangle^2 \langle x, x \rangle - \langle y, y \rangle\langle y, x \rangle\langle x, y \rangle - \langle x, y \rangle\langle y, y \rangle\langle y, x \rangle + \langle x, y \rangle\langle y, x \rangle$$
$$= 0$$
$\langle 1 \rangle 4$. If x and y are linearly dependent then $|\langle x, y \rangle| = \|x\|\|y\|$
   $\langle 2 \rangle 1$. Assume: x and y are linearly dependent.
   $\langle 2 \rangle 2$. Let: $y = \alpha x$
   $\langle 2 \rangle 3$. $|\langle x, y \rangle| = \|x\|\|y\|$
     Proof:
$$\begin{aligned}
|\langle x, y \rangle| &= |\langle x, \alpha x \rangle| \\
&= |\alpha||\langle x, x \rangle| \\
&= |\alpha|\|x\|^2 \\
&= \|x\|\|\alpha x\| \\
&= \|x\|\|y\|
\end{aligned}$$

☐

Corollary 18.0.11.1 (Triangle Inequality)**.** *In any inner product space,*

$$\|x + y\| \leq \|x\| + \|y\|$$

PROOF:

$$\begin{aligned}
\|x + y\|^2 &= \langle x + y, x + y \rangle \\
&= \langle x, x \rangle + \langle x, y \rangle + \langle y, x \rangle + \langle y, y \rangle \\
&\leq \langle x, x \rangle + 2|\langle x, y \rangle| + \langle y, y \rangle \\
&\leq \|x\|^2 + 2\|x\|\|y\| + \|y\|^2 \qquad \text{(Schwarz's Inequality)} \\
&= (\|x\| + \|y\|)^2 \qquad\qquad\qquad\qquad \Box
\end{aligned}$$

Corollary 18.0.11.2. *The norm in an inner product space is a norm.*

Theorem 18.0.12 (Parallelogram Law)**.** *In any inner product space,*

$$\|x + y\|^2 + \|x - y\|^2 = 2(\|x\|^2 + \|y\|^2)$$

PROOF:
$\langle 1 \rangle 1.$ $\|x + y\|^2 = \|x\|^2 + \langle x, y \rangle + \langle y, x \rangle + \|y\|^2$
$\langle 1 \rangle 2.$ $\|x - y\|^2 = \|x\|^2 - \langle x, y \rangle - \langle y, x \rangle + \|y\|^2$
$\langle 1 \rangle 3.$ Q.E.D.
　PROOF: Add $\langle 1 \rangle 1$ and $\langle 1 \rangle 2$.
$\Box$

Proposition 18.0.13. *Let E be a normed space over $\mathbb{C}$. Then there exists an inner product on E that induces the norm of E iff E satisfies the Parallelogram Law.*

PROOF: If E satisfies the parallelogram law, define
$$\langle x, y \rangle = \frac{1}{4}(\|x + y\|^2 - \|x - y\|^2 + i\|x + iy\|^2 - i\|x - iy\|^2) \ .$$

Definition 18.0.14 (Orthogonal)**.** Vectors x and y in an inner product space are *orthogonal*, $x \perp y$, iff $\langle x, y \rangle = 0$.

Theorem 18.0.15 (Pythagorean Formula)**.** *If x and y are orthogonal then*

$$\|x + y\|^2 = \|x\|^2 + \|y\|^2 \ .$$

Definition 18.0.16 (Weak Convergence)**.** Let E be an inner product space. Let (x_n) be a sequence in E and $l \in E$. Then (x_n) *weakly converges* to l, $x_n \overset{w}{\to} l$ as $n \to \infty$, iff $\forall y \in E.\langle x_n, y \rangle \to \langle l, y \rangle$ as $n \to \infty$.

Proposition 18.0.17. *In any inner product space E, the inner product $\langle \ , \ \rangle : E^2 \to \mathbb{C}$ is continuous.*

PROOF:
$\langle 1 \rangle 1.$ LET: $x_n \to x$ and $y_n \to y$ in E.
$\langle 1 \rangle 2.$ $\langle x_n, y_n \rangle \to \langle x, y \rangle$
　PROOF:
$$\begin{aligned}
|\langle x_n, y_n \rangle - \langle x, y \rangle| &\leq |\langle x_n, y_n \rangle - \langle x_n, y \rangle| + |\langle x_n, y \rangle - \langle x, y \rangle| \\
&= |\langle x_n, y_n - y \rangle| + |\langle x_n - x, y \rangle| \\
&\leq \|x_n\|\|y_n - y\| + \|x_n - x\|\|y\| \qquad \text{(Schwarz's Inequality)} \\
&\to 0
\end{aligned}$$
　using the fact that (x_n) is bounded.

☐

Theorem 18.0.18. *$x_n \to l$ if and only if $x_n \xrightarrow{w} l$ and $\|x_n\| \to \|x\|$.*

PROOF:

$\langle 1 \rangle 1$. If $x_n \to l$ then $x_n \xrightarrow{w} l$ and $\|x_n\| \to \|l\|$.

   PROOF: Easy using the fact that the inner product is continuous.

$\langle 1 \rangle 2$. If $x_n \xrightarrow{w} l$ and $\|x_n\| \to \|l\|$ then $x_n \to l$.

   $\langle 2 \rangle 1$. ASSUME: $x_n \xrightarrow{w} l$ and $\|x_n\| \to \|l\|$

   $\langle 2 \rangle 2$. $\langle x_n, l \rangle \to \|l\|^2$

   $\langle 2 \rangle 3$. $\|x_n - l\| \to 0$

      PROOF:

$$\begin{aligned}
\|x_n - l\|^2 &= \langle x_n - l, x_n - l \rangle \\
&= \langle x_n, x_n \rangle - \langle x_n, l \rangle - \langle l, x_n \rangle + \langle l, l \rangle \\
&= \|x_n\|^2 - \langle x_n, l \rangle - \overline{\langle x_n, l \rangle} + \|l\|^2 \\
&\to \|l\|^2 - 2\|l\|^2 + \|l\|^2 \\
&= 0
\end{aligned}$$

☐

Theorem 18.0.19. *Let S be a subset of an inner product space E such that span S is dense in E. If (x_n) is a bounded sequence in E and, for all $y \in S$, we have $\langle x_n, y \rangle \to \langle x, y \rangle$ then $x_n \xrightarrow{w} x$.*

PROOF:

$\langle 1 \rangle 1$. For all $y \in \text{span } S$, we have $\langle x_n, y \rangle \to \langle x, y \rangle$

$\langle 1 \rangle 2$. LET: $z \in E$

      PROVE: $\langle x_n, z \rangle \to \langle x, z \rangle$

$\langle 1 \rangle 3$. LET: $\epsilon > 0$

      PROVE: There exists n_0 such that $\forall n \geq n_0. |\langle x_n, z \rangle - \langle x, z \rangle| < \epsilon$

$\langle 1 \rangle 4$. PICK $M > 0$ such that $\|x\| \leq M$ and $\forall n \in \mathbb{Z}_+. \|x_n\| \leq M$.

18.1   Orthonormal Bases

Definition 18.1.1 (Orthogonal)**.** Let V be an inner product space and $S \subseteq V$. Then S is *orthogonal* iff any two distinct elements of S are orthogonal.

Definition 18.1.2 (Orthonormal)**.** Let V be an inner product space and $S \subseteq V$. Then S is *orthonormal* iff it is orthogonal and $\forall x \in S.\|x\| = 1$.

Proposition 18.1.3. *Orthonormal sets are linearly independent.*

Proof:
$\langle 1\rangle 1$. Let: S be orthonormal
$\langle 1\rangle 2$. Assume: $\alpha_1 e_1 + \cdots + \alpha_n e_n = 0$ where $e_1, \ldots, e_n \in S$
$\langle 1\rangle 3$. $|\alpha_1|^2 + \cdots |\alpha_n|^2 = 0$
   Proof:

$$
\begin{aligned}
0 &= \sum_{m=1}^{n} \langle 0, \alpha_m e_m \rangle \\
&= \sum_{m=1}^{n} \langle \sum_{k=1}^{n} \alpha_k e_k, \alpha_m e_m \rangle \\
&= \sum_{m=1}^{n} \sum_{k=1}^{n} \alpha_k \overline{\alpha_m} \langle e_k, e_m \rangle \\
&= \sum_{k=1}^{n} |\alpha_k|^2
\end{aligned}
$$

$\langle 1\rangle 4$. $\alpha_1 = \cdots = \alpha_n = 0$
$\square$

Proposition 18.1.4. *In l^2, let e_n be the sequence whose nth element is 1 and whose other elements are 0. Then $\{e_n \mid n \in \mathbb{Z}_+\}$ is orthonormal.*

Proposition 18.1.5. *In $L^2([-\pi, \pi])$, let $\phi_n(x) = e^{inx}/\sqrt{2\pi}$ for $n \in \mathbb{Z}$. Then $\{\phi_n \mid n \in \mathbb{Z}\}$ is orthonormal.*

Definition 18.1.6 (Legendre Polynomials)**.** The *Legendre polynomials* $P_n \in \mathbb{Q}[x]$ for $n \in \mathbb{N}$ are defined by

$$
P_0 = 1
$$
$$
P_n = \frac{1}{2^n n!} \frac{d^n}{dx^n} (x^2 - 1)^n
$$

Proposition 18.1.7. *Let P_n be the nth Legendre polynomial. Then $\{P_n \mid n \in \mathbb{N}\}$ is orthogonal in $L^2([-1, 1])$.*

Definition 18.1.8 (Hermite Polynomial)**.** The *Hermite polynomials* $H_n \in \mathbb{R}[x]$ for $n \in \mathbb{N}$ are defined by

$$
H_n(x) = (-1)^n e^{x^2} \frac{d^n}{dx^n} e^{-x^2} \ .
$$

Proposition 18.1.9. *Let H_n be the nth Hermite polynomial. Then $\{e^{-x^2/2} H_n(x) \mid n \in \mathbb{N}\}$ is orthogonal in $L^2(\mathbb{R})$.*

Theorem 18.1.10. *Let V be an inner product space. If $x_1, \ldots, x_n \in V$ are orthogonal then*

$$\left\| \sum_{i=1}^{n} x_i \right\|^2 = \sum_{i=1}^{n} \|x_i\|^2 \ .$$

Theorem 18.1.11 (Bessel's Equality)**.** *Let V be an inner product space. Let $x_1, \ldots, x_n \in V$ be orthonormal. Let $x \in V$. Then*

$$\left\| x - \sum_{k=1}^{n} \langle x, x_k \rangle x_k \right\|^2 = \|x\|^2 - \sum_{k=1}^{n} |\langle x, x_k \rangle|^2 \ .$$

PROOF:

$$\left\| x - \sum_{k=1}^{n} \langle x, x_k \rangle x_k \right\|^2 = \left\langle x - \sum_{k=1}^{n} \langle x, x_k \rangle x_k, x - \sum_{k=1}^{n} \langle x, x_k \rangle x_k \right\rangle$$

$$= \langle x, x \rangle - \left\langle x, \sum_{k=1}^{n} \langle x, x_k \rangle x_k \right\rangle - \left\langle \sum_{k=1}^{n} \langle x, x_k \rangle x_k, x \right\rangle$$

$$+ \left\langle \sum_{k=1}^{n} \langle x, x_k \rangle x_k, \sum_{k=1}^{n} \langle x, x_k \rangle x_k \right\rangle$$

$$= \langle x, x \rangle - 2 \sum_{k=1}^{n} \langle x, x_k \rangle \langle x_k, x \rangle + \sum_{i=1}^{n} \sum_{j=1}^{n} \langle x, x_i \rangle \langle x_j, x \rangle \langle x_i, x_j \rangle$$

$$= \|x\|^2 - 2 \sum_{k=1}^{n} |\langle x, x_k \rangle|^2 + \sum_{i=1}^{n} \langle x, x_i \rangle \langle x_i, x \rangle$$

$$= \|x\|^2 - \sum_{k=1}^{n} |\langle x, x_k \rangle|^2 \qquad\qquad □$$

Corollary 18.1.11.1 (Bessel's Inequality)**.** *Let V be an inner product space. Let $x_1, \ldots, x_n \in V$ be orthonormal. Let $x \in E$. Then*

$$\sum_{k=1}^{n} |\langle x, x_k \rangle|^2 \leq \|x\|^2 \ .$$

Corollary 18.1.11.2. *Orthonormal sequences are weakly convergent to 0.*

PROOF: Let (x_n) be an orthonormal sequence. Taking the limit in Bessel's inequality we have $\sum_{k=1}^{\infty} |\langle x, x_k \rangle|^2 \leq \|x\|^2 < \infty$ and so $\langle x, x_k \rangle \to 0$ as $k \to \infty$.
□

Corollary 18.1.11.3 (Generalized Fourier Series)**.** *Let V be an inner product space. Let (e_n) be an orthonormal sequence in V. For any $x \in V$, the* generalized Fourier series *of x is*

$$\sum_{n=1}^{\infty} \langle x, e_n \rangle e_n \ ,$$

and $\langle x, e_n \rangle$ is called the nth generalized Fourier coefficient *of x with respect to (e_n). We have $(\langle x, e_n \rangle e_n)_n \in l^2$.*

Definition 18.1.12 (Complete Orthonormal Sequence)**.** Let E be an inner product space. Let (x_n) be an orthonormal sequence in E. Then (x_n) is *complete* iff, for all $x \in E$, we have

$$\sum_{n=1}^{\infty} \langle x, x_n \rangle x_n = x \ .$$

Chapter 19

Hilbert Spaces

Definition 19.0.1 (Hilbert Space)**.** A *Hilbert space* is a complete inner product space.

Proposition 19.0.2. *For $n \in \mathbb{N}$, $\mathbb{C}^n$ is a Hilbert space.*

Proposition 19.0.3. *l^2 is a Hilbert space.*

Proposition 19.0.4. *$L^2(\mathbb{R})$ is a Hilbert space.*

Proposition 19.0.5. *$L^2([a, b])$ is a Hilbert space.*

Proposition 19.0.6. *Let ρ be a measurable function on $[a, b]$ such that $\rho(x) > 0$ almost everywhere. Let $L^{2\rho}([a, b])$ be the set of all measurable functions $f : [a, b] \to \mathbb{C}$ such that*

$$\int_a^b |f(x)|^2 \rho(x) dx < \infty \ .$$

Define an inner product on $L^{2\rho}([a, b])$ by

$$\langle f, g \rangle = \int_a^b f(x)\overline{g(x)}\rho(x) dx \ .$$

Then $L^{2\rho}([a, b])$ is a Hilbert space.

Proposition 19.0.7. *Let m and N be positive integers. Let Ω be an open set in $\mathbb{R}^N$. Let $\tilde{H}^m(\Omega)$ be the set of all $f \in \mathcal{C}^m(\Omega)$ such that, for every $\alpha = (\alpha_1, \ldots, \alpha_N) \in \mathbb{Z}_+^N$ with $|\alpha| := \alpha_1 + \cdots + \alpha_N \le m$, we have*

$$D^\alpha f := \frac{\partial^{|\alpha|} f}{\partial x_1^{\alpha_1} \partial x_2^{\alpha_2} \cdots \partial x_N^{\alpha_N}} \in L^2(\Omega) \ .$$

Define an inner product on $\tilde{H}^m(\Omega)$ by

$$\langle f, g \rangle := \int_\Omega \sum_\alpha D^\alpha f \overline{D^\alpha g} \ .$$

Let $H^m(\Omega)$ be the completion of $\tilde{H}^m(\Omega)$. Then $H^m(\Omega)$ is a Hilbert space.

Theorem 19.0.8. *Weakly convergent sequences in a Hilbert space are bounded.*

PROOF:

$\langle 1\rangle 1$. LET: H be a Hilbert space.

$\langle 1\rangle 2$. LET: (x_n) be a weakly convergent sequence in H.

$\langle 1\rangle 3$. For $n \in \mathbb{Z}_+$,

    LET: $f_n : H \to \mathbb{C}$, $f_n(x) = \langle x, x_n \rangle$

$\langle 1\rangle 4$. For $n \in \mathbb{Z}_+$, f_n is a bounded linear functional.

$\langle 1\rangle 5$. For every $x \in H$, the sequence $(f_n(x))$ is bounded.

  PROOF: Since it converges.

$\langle 1\rangle 6$. PICK $M > 0$ such that, for all $n \in \mathbb{Z}_+$, we have $\|f_n\| \leq M$.

  PROOF: Banach-Steinhaus Theorem, $\langle 1\rangle 4$, $\langle 1\rangle 5$.

$\langle 1\rangle 7$. $\forall n \in \mathbb{Z}_+ . \|f_n\| = \|x_n\|$

  $\langle 2\rangle 1$. LET: $n \in \mathbb{Z}_+$

  $\langle 2\rangle 2$. $\|f_n\| \leq \|x_n\|$

    PROOF: Since for all $x \in H$ we have $|f_n(x)| = |\langle x, x_n \rangle| \leq \|x\|\|x_n\|$ by Schwarz's Inequality.

  $\langle 2\rangle 3$. $\|x_n\| \leq \|f_n\|$

    PROOF: Since $\|x_n\|^2 = |\langle x_n, x_n \rangle| = |f_n(x_n)| \leq \|f_n\|\|x_n\|$.

$\langle 1\rangle 8$. $\forall n \in \mathbb{Z}_+ . \|x_n\| \leq M$

  PROOF: $\langle 1\rangle 6$, $\langle 1\rangle 7$

□

Theorem 19.0.9. *Let H be a Hilbert space. Let (x_n) be an orthonormal sequence in H and let (α_n) be a sequence of complex numbers. Then the series $\sum_{n=1}^{\infty} \alpha_n x_n$ converges in H if and only if $\sum_{n=1}^{\infty} |\alpha_n|$ converges in $\mathbb{R}$, in which case*

$$\left\| \sum_{n=1}^{\infty} \alpha_n x_n \right\|^2 = \sum_{n=1}^{\infty} |\alpha_n|^2 \ .$$

PROOF:

$\langle 1\rangle 1$. For $m > k > 0$ we have

$$\left\| \sum_{n=k}^{m} \alpha_n x_n \right\|^2 = \sum_{n=k}^{m} |\alpha_n|^2 \ .$$

  PROOF: Theorem 18.1.10.

$\langle 1\rangle 2$. If $\sum_{n=1}^{\infty} |\alpha_n|^2 < \infty$ then $\sum_{n=1}^{\infty} \alpha_n x_n$ converges.

  $\langle 2\rangle 1$. ASSUME: $\sum_{n=1}^{\infty} |\alpha_n|^2 < \infty$

  $\langle 2\rangle 2$. $\left(\sum_{n=1}^{m} \alpha_n x_n \right)_m$ is Cauchy.

    PROOF: From $\langle 1\rangle 1$.

  $\langle 2\rangle 3$. $\sum_{n=1}^{\infty} \alpha_n x_n$ converges.

$\langle 1\rangle 3$. If $\sum_{n=1}^{\infty} \alpha_n x_n$ converges then $\sum_{n=1}^{\infty} |\alpha_n|^2 < \infty$.

  PROOF: From $\langle 1\rangle 1$.

$\langle 1\rangle 4$. If $\sum_{n=1}^{\infty} |\alpha_n|^2 < \infty$ then

$$\left\| \sum_{n=1}^{\infty} \alpha_n x_n \right\|^2 = \sum_{n=1}^{\infty} |\alpha_n|^2 \ .$$

PROOF: From $\langle 1 \rangle 1$.

□

Proposition 19.0.10. *Every complete orthonormal sequence in a Hilbert space is a basis.*

PROOF:
$\langle 1 \rangle 1$. LET: E be an inner product space.
$\langle 1 \rangle 2$. LET: (e_n) be a complete orthonormal sequence in E.
$\langle 1 \rangle 3$. For all $x \in E$, there exists a sequence (α_n) in $\mathbb{C}$ such that $x = \sum_n \alpha_n e_n$.
  PROOF: Immediate from $\langle 1 \rangle 2$.
$\langle 1 \rangle 4$. If $\sum_n \alpha_n e_n = \sum_n \beta_n e_n$ then $\alpha_n = \beta_n$ for all n.
  $\langle 2 \rangle 1$. LET: $x = \sum_n \alpha_n e_n = \sum_n \beta_n e_n$
  $\langle 2 \rangle 2$. $\sum_n |\alpha_n - \beta_n|^2 = 0$
    PROOF:

$$
\begin{aligned}
0 &= \|x - x\|^2 \\
&= \left\| \sum_{n=1}^{\infty} \alpha_n e_n - \sum_{n=1}^{\infty} \beta_n e_n \right\|^2 && (\langle 2 \rangle 1) \\
&= \left\| \sum_{n=1}^{\infty} (\alpha_n - \beta_n) e_n \right\|^2 \\
&= \sum_{n=1}^{\infty} |\alpha_n - \beta_n|^2 && \text{(Theorem 19.0.9)}
\end{aligned}
$$

  $\langle 2 \rangle 3$. $\alpha_n = \beta_n$ for all n.

□

Theorem 19.0.11. *An orthonormal sequence (x_n) in a Hilbert space H is complete if and only if, for all $x \in H$, if $\forall n. \langle x, x_n \rangle = 0$ then $x = 0$.*

PROOF:
$\langle 1 \rangle 1$. If (x_n) is complete then, for all $x \in H$, if $\forall n. \langle x, x_n \rangle = 0$ then $x = 0$.
  $\langle 2 \rangle 1$. ASSUME: (x_n) is complete.
  $\langle 2 \rangle 2$. LET: $x \in H$
  $\langle 2 \rangle 3$. ASSUME: $\forall n. \langle x, x_n \rangle = 0$
  $\langle 2 \rangle 4$. $x = \sum_{n=1}^{\infty} \langle x, x_n \rangle x_n = 0$
$\langle 1 \rangle 2$. If, for all $x \in H$, if $\forall n. \langle x, x_n \rangle = 0$ then $x = 0$, then (x_n) is complete.
  $\langle 2 \rangle 1$. ASSUME: For all $x \in H$, if $\forall n. \langle x, x_n \rangle = 0$, then $x = 0$.
  $\langle 2 \rangle 2$. LET: $y = x - \sum_{n=1}^{\infty} \langle x, x_n \rangle x_n$
  $\langle 2 \rangle 3$. For all n, $\langle y, x_n \rangle = 0$
    $\langle 3 \rangle 1$. LET: $n \in \mathbb{Z}_+$
    $\langle 3 \rangle 2$. $\langle y, x_n \rangle = 0$

Proof:

$$\langle y, x_n \rangle = \left\langle x - \sum_{m=1}^{\infty} \langle x, x_m \rangle x_m, x_n \right\rangle$$

$$= \langle x, x_n \rangle - \sum_{m=1}^{\infty} \langle x, x_m \rangle \langle x_m, x_n \rangle$$

$$= \langle x, x_n \rangle - \langle x, x_n \rangle$$

$$= 0$$

$\langle 2 \rangle 4.$ $y = 0$
$\langle 2 \rangle 5.$ $x = \sum_{n=1}^{\infty} \langle x, x_n \rangle x_n$

□

Theorem 19.0.12 (Parseval's Formula)**.** *Let H be a Hilbert space. Let (x_n) be an orthonormal sequence in H. Then (x_n) is complete if and only if, for all $x \in H$,*

$$\|x\|^2 = \sum_{n=1}^{\infty} |\langle x, x_n \rangle|^2 \ .$$

Proof:
$\langle 1 \rangle 1.$ If (x_n) is complete then for all $x \in H$ we have $\|x\|^2 = \sum_{n=1}^{\infty} |\langle x, x_n \rangle|^2$.
   $\langle 2 \rangle 1.$ ASSUME: (x_n) is complete.
   $\langle 2 \rangle 2.$ LET: $x \in H$
   $\langle 2 \rangle 3.$ $\|x\|^2 = \sum_{n=1}^{\infty} |\langle x, x_n \rangle|^2$
      Proof:

$$\|x\|^2 = \left\| \sum_{n=1}^{\infty} \langle x, x_n \rangle x_n \right\|^2 \qquad\qquad (\langle 2 \rangle 1)$$

$$= \sum_{n=1}^{\infty} |\langle x, x_n \rangle|^2 \qquad\qquad \text{(Theorem 19.0.9)}$$

$\langle 1 \rangle 2.$ If, for all $x \in H$, we have $\|x\|^2 = \sum_{n=1}^{\infty} |\langle x, x_n \rangle|^2$, then (x_n) is complete.
   $\langle 2 \rangle 1.$ ASSUME: For all $x \in H$, we have $\|x\|^2 = \sum_{n=1}^{\infty} |\langle x, x_n \rangle|^2$
   $\langle 2 \rangle 2.$ LET: $x \in H$
   $\langle 2 \rangle 3.$ $x = \sum_{n=1}^{\infty} \langle x, x_n \rangle x_n$
